MILWAUKEE, WIS.—The Florists' Club gave a largely attended dancing party February 11 in Miller's hall, Eighth and State streets. There were 400 present. The hall was decorated in green, with smilax, palms and ferns. A big flower show may be given at the Auditorium next November by the club, between $8,000 and $10,000 being mentioned as the amount to be expended.

The Seed Trade.

American Seed Trade Association.
Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

THE John A. Salzer Seed Co. is mailing its catalogues from St. Paul.

TEXAS points in the San Antonio vicinity are experiencing a warm and very dry spell.

SOUTHERN FRANCE reports severe cold weather. What effect it may have on the bulb or flower seed crops of that district is problematical.

NORMAN L. COLMAN, former state secretary of agriculture of Missouri, said recently that the southern part of the state is literally overrun by a gang of men selling fake seeds and he warns farmers and others against buying of them, advising them to go to reputable seedsmen.

RESOLUTIONS by the legislative and tariff committee of the Society of American Florists, recommending that certain specific duties be levied upon various imported bulbs and plants and the amount of duty recommended for each will be printed in our next issue.

FRENCH BULB PRICES.—While the acreage planted would not seem to justify an advance over last year, yet the fact that most French bulbs were sold out early at the asked prices last season might prompt the growers to ask some advance for 1909. The hard frosts of January may also have some influence on prices.

CHICAGO.—Onion sets have been a little easier. In car lots, whites have sold at $2.70; reds and yellows as low as $1.65, but usually not of the choicest stocks. Fancy sets about 10 cents higher. Louisville is asking about the same.—Contract prices on the board of trade March 3 for grass seed were noted as follows: Prime timothy, $3.85, white clover, $15.

WASHINGTON, D. C.—In the senate February 24, Senator McCumber of North Dakota discussed at length the right of congress under the constitution to fix standards for grain and declared that present practices make impossible the sale of western grain at prices to which it is really entitled. Senator Heyburn denounced the methods of administrating the forest service in a speech which occupied two hours.

Braslan Seed Growers' Co.
Lettuce Onion, Sweet Peas.
Growers For the Wholesale Trade Only.
SAN JOSE, CALIF.

THE Market Growers Journal says editorially, "Every seedsman has four classes of varieties, that is, specialties, novelties, standards and humbugs." It says further that "humbugs include many novelties and old varieties which are planted today by farmers because their grandfathers used them. Reliable seedsmen do not like to handle these classes of seeds, but they do it because a great many people like to be humbugged." We are quite sure that a large number of reputable seedsmen will fail to agree with the broad statement made in this editorial.

The Albert Dickinson Co. Fire.
1. Warehouse Not Injured. 2. Flax House Destroyed.

W. ATLEE BURPEE and son W. Atlee, Jr., returned February 24 from their trip to the West Indies and the Spanish main. Mr. Burpee entertained at luncheon in the Colonial room of Union League last Friday, a party of 11, consisting of C. H. Brick and J. Smith of Boston, S. F. Willard of Wethersfield, Conn., H. W. Wood of Richmond, Va., and from Philadelphia, H. W. Johnson, Robt. Buist, Capt. Burnet Landreth, Walter P. Stokes, G. F. Tull of Henry A. Dreer, S. F. Burt of S. L. Allen & Co., and Howard M. Earl. The table was decorated with tulips, narcissi and freesias. That the luncheon was enjoyed by all can be assumed by the fact that the party sat down at 1 p. m. and good-byes were not said until 5 p. m.—K.

Growers for the Wholesale Trade,
GRAND RAPIDS, MICH

Fire at Chicago.

Chicago.—This was the sensation of the past week here in the seed trade, the event calling for a general alarm and occupying the attention of some 32 companies of the fire department. The fire started Friday morning at 8 o'clock and fire engines were still working on the mass of scorched seed and debris Monday morning.

The building destroyed is known to the A. D. Co. as the "flax house," for handling that class of seed and bulk grains. The area covered was 100 by 180 feet, height 10 stories and basement. Building and contents practically destroyed. This does not affect the offices or seed cleaning warehouses of the firm. The firm has in Chicago 17 different buildings used as warehouses separate from the one destroyed. There was some injury by water in the basements of four houses not far distant from the one destroyed, but this has been pumped out. The loss is fully covered by insurance.

The Albert Dickinson Co. greatly appreciates the many kind expressions of sympathy received from the trade by wire and mail.

Decisions in Pure Food Law Reversed.

Washington, D. C., February 25.—No objection will be raised under the pure food and drug acts to the use in food of benzoate of soda, provided each package of such food is plainly labeled to show the presence and amount of the soda. This is the decision of the board of food and drug inspection made public today and is an amendment to previous decisions. The decision gives effect to the report of the referee board of consulting scientific experts, who decided as a result of three extensive and exhaustive investigations that benzoate of soda mixed with food is not deleterious or poisonous and is not injurious to health.

New York State Heard From.

Albany, N. Y., February 23.—Commissioner Pearson, of the State Department of Agriculture, said today that the purpose of the bill introduced last night by Assemblyman Callan, of Columbia county, requiring the marking of packages of seed, was not only to guard against fraud but to prevent New York state being made a dumping ground for low grade seed. The bill provides that seed packages must be marked with the names of the seller and with the per cent of purity.

"Canada and many states of this country," said Commissioner Pearson, "have a very clever law by which they prohibit the sale of low grade seed within their territory but allow it to be sold in other states and countries. The result is that New York state for some time has been a dumping ground for all the cheap, sterile seed of Canada and these other states. The bill does not prevent the sale of low grade seed, but provides that it must be marked so that a purchaser will know what he is getting."

Lily of the Valley Pips.

DENMARK GROWING CONSIDERABLE STOCK.

A very large stock of second quality crowns and planting stock are left on the hands of the German growers, and they are being put back for stock purposes so that, given a favorable season this year for the satisfactory development of the pips, they should be cheap and plentiful, and of first rate quality next fall. I have recently come across some extraordinary fine samples grown in Denmark, says a correspondent of the Horticultural Trade Journal (Eng.), fully equal to any produced in other countries, and up to the present. I have seen nothing but light sand samples, and a total absence of those strong, coarse pips containing a big percentage of prematurely grown bells. Lily of the valley has for many years been cultivated and exported to this country on a small scale by Denmark, but the trade looks like making a big spurt just now, and I hear a much larger quantity has come to this country this year. Also large quantities of planting stock are being imported into Denmark, and the acreage is being much increased; some quantities of these Danish-grown are being put into cold stores this year. After some few years' experiments they appear to be quite well adapted for this purpose, especially for very late retarding, which has always been such a difficult question. Most samples will turn out fairly satisfactory if taken out of the ice, say at six months, but to choose a sample which will come out with 80 per cent or more first class after 9 to 12 months' cold storage, requires long experience and very careful judgment. In a score of different samples from Germany there may not be more than two at all suitable for late retarding. From what I have seen of these Danish grown, they are more uniform in quality, and more generally suitable for all-round purposes, and certainly as successful for cold storage as any I have handled.

The variety, Fortin's Giant, appears to be gaining in favor. The price runs at present very high, but it is worth the extra. It has a very strong growing spike, with exceptionally large bells, and is not at all liable to rot or damp off when forcing. The spike is very much inclined to coarseness, however, and some growers find this a drawback on the market; also to my mind, the scent is weak. But Fortin's will be found to be a very reliable crown, easy to handle, and also the only variety that can be planted out in ordinary garden soil, and produce in a year or two a good crop of new forcing crowns.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

CANON CITY, COLO.—Isaac Davis is building a fine new greenhouse for the culture of vegetable plants.

PARIS, TEX.—A greenhouse on the farm of Chas. Cawley was destroyed by fire recently, together with several thousand young plants and a lot of seed potatoes and other property. No insurance was carried.

Hotbeds.

Looking back over a period of 20 years' experience with hotbeds, the writer cannot recall a failure; that is, a case where a bed froze out, burned out, or refused to heat up after being made up. Such a record is not a case of luck, it is the result of well tried methods, faithfully carried out. In a hotbed we want a mild heat, of long duration, and as nearly uniform from one end to the other as possible. To get these qualities, it will pay any operator to go to considerable trouble as, without them, the whole work may be in vain. We believe in, and practice, pre-heating: That is, the material is first piled up to heat, and allowed to heat thoroughly. It is thereby reduced in bulk, more pliable, will pack better and settle less.

When building beds, we shake the manure out thoroughly to get it even, fine, and well mixed; the more evenly it is shaken up, the more air will be imbedded, which means more heat. After a bed is made up, it is immediately covered with sash, and shutters if needed, to retain the heat. It is then allowed to reheat, say 48 hours, when, if thoroughly hot, we open, tramp down carefully, and if any soft spots are found, carefully level them. Then the soil is put in; we never use more than four inches in depth, which is ample for all purposes. For best results, the soil should be rather dry. It will absorb plenty of moisture in a few days and be just right, where a wet soil would become unfit for work.

We allow a bed to decline in heat for a week or 10 days, before planting; generally we wait until a good crop of weeds appear. Where there is the least danger of surface water, we build on top of ground, as water will destroy the heat as readily as it will put out a fire. A hotbed site should be well drained. We have used all styles of hotbeds—sunk entirely into the ground, partly, and entirely above ground. In cold localities and where manure is scarce, it is a good plan to go below the surface.

At present we have plenty of fresh manure, and after it has been used it is just in the right condition to top-dress in the summer by running it out with a manure spreader—hence we build entirely above ground one bed close to the other—allowing only 20-inch walks, which makes one solid block all uniformly warm. The frames are all 1-inch pine boards, the front only 8 inches, the back 12 inches; each frame for five sash. Thus we get along with the minimum amount of lumber, and the frames are movable anywhere. When a crop of plants is to be hardened off, we not only remove the sash, but carry the frame away entirely. And when all is over in June, the manure spreader cleans up the material and the land is planted to head lettuce, cauliflower, or celery, to recover any leached out fertility.

As regards cross bars for the sash to slide on, we have never used any, the main objection to these being the shade they cast, thus very much reducing the efficiency of a frame. There is too much wood in sash already. With regard to ventilating, our first moves are sideways, that is, we allow the center sash to remain, and slide both sash on each side, sideways, an inch or two to admit light and air between the sash. When more air is needed the ends are propped up

We are thus able to produce absolutely uniform results from end to end. Where manure must be stored to have a supply at the proper time, the best method is to have livestock tramp it solid as fast as hauled. MARKETMAN.

—TO THE TRADE—

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

GREAT FALLS, MONT.—Wm. Husemeyer has resigned his position as superintendent of the city parks.

YANKTON, S. D.—Geo. H. Whiting, president of the Whiting Nursery Co., was married at Watertown, February 24, to Mrs. Eva E. Williams. The couple at once left for their home here.

TEXAS orchardists are said to be very indignant at the careless methods of some shippers of nursery stock who, they claim, have sent hundreds of diseased and insect-infected trees into the state. Where were the inspectors?

ROCHESTER, N. Y.—The Phillips Nursery Co. was incorporated February 25, at Albany with a capital of $5,000. The directors are H. Bartlett Phillips of this city, J. C. Johnson, Englewood, N. J., and Henry E. Goudy, New York.

DAYTON, O.—The Miami Valley Nurserymen's Association held its fourth annual banquet at the Phillips house February 18, about 50 members being present. The following officers were elected: T. I. Dinsmore, Troy, president; W. N. Scharff, New Carlisle, secretary and treasurer. J. W. McNary and L. M. Brumhall both gave interesting speeches.

Seed Sowing.

Notwithstanding the ease with which most of our hardy shrubs are propagated by cuttings either of green or ripened wood, there are times when it is advisable to increase the stock by seed sowing. And it is often the case that much better plants can be obtained in this way. There are, too, quite a number of trees and shrubs which utterly refuse to strike from cuttings of any kind; or, at least, they have not been so propagated up to the present time, and these varieties must of course be propagated by seeds or by the slower and more expensive process of grafting or budding. Some species of viburnum, cornus and other refractory subjects are readily propagated by seeds, and, even among species which strike easily from cuttings, raising from seed is frequently preferred. Most stocks for grafting, many of our evergreens and the large majority of our trees are seedlings.

As a rule I think seedlings possess a better root system than plants grown from cuttings. Sports and sterile varieties are of course increased by some of the asexual means. There is a great variation in the ease with which seedlings are grown and also a great variation in the time required for the seeds to germinate. Some, like weeds, germinate quickly and push forth a vigorous growth in a brief time, while others require special treatment or perhaps require a year or two to sprout. Some seeds germinate more readily if stratified or placed in soil and exposed to the frosts of winter while others must be sown as soon as ripe, and begin their growth within a few days. Some few are benefited by a hot water bath to soften the outer coats, and a few are the better for a surgical operation to pierce the tough enclosing skin or shell.

It should be remembered that quite a number of our seeds, like those of some of the viburnums and others, will not sprout the first year but require the exposure to two winters to prepare them for the duties of this life. Such seeds are better placed in mice-proof boxes and buried in the ground until their time comes. It is usual to sow the seeds of hardy shrubs and trees in frames outdoors, but it often happens that we are short of young stock for lining out or for some other purpose, and then many of the seeds of our common shrubs are sown in winter under glass. We usually sow the seed in flats about two and one-half inches deep and of a length and breadth which will admit of easy handling. A cool house is the place for them and so long as they have a temperature above the freezing point at night and from 50°-60° in the day time, they are all right. After germinating give them plenty of air and not too high a temperature. In a few months they will be several inches high with a nice root system. As soon as the season is far enough advanced they may be transplanted into the nursery and will soon start into active growth again. By this method plants can often be obtained in nine months that will readily pass for two-year-olds.

We like to sow most of our conifers and other delicate or slow-growing plants under glass as they can have better care and the conditions suitable for growth can be better supplied. In preparing our flats we use about one inch of fairly good compost in the bottom, but a very light soil on top for the immediate covering of the seeds. Should there be any danger of damping off, as is frequently the case with acacia seeds, a dip in a weak solution of liver of sulphur will prevent the injury.

It is possible that we may carry the propagation of plants too far by cuttings. While some kinds of plants have become almost seedless and depend for increase on some of the vegetable processes, like suckering or layering, or by throwing off buds or cuttings yet all these processes are theoretically devitalizing, and it is a fact that we get, in most cases, a much more vigorous and shapely offspring by seed reproduction. To my mind we get, even in the case of our common red dogwood (Cornus stolonifera), a much more shapely plant through sexual reproduction by means of seed. So firm is our faith in the seedlings that we grow every year a lot of dogwoods from seeds. And there are others.

JOHN F. COWELL.

V1 Spray Fluids.

As the season is now quite advanced, the matter of the right spray fluids should have immediate attention. Wm. Cooper & Nephews, 177 Illinois street, Chicago, have become actively interested in horticulture and some time back established a research laboratory, with its attendent staff of experienced men, to investigate the spray fluid problem. The culmination of their work is the production of the V1, V2 and V3 spray fluids which are offered to American fruit growers on their merits. It is claimed that these fluids represent the perfect combination of fungicide and insecticide and destroy scale and fungus in active or resting stages. Further advantages are instant mixing with water, freedom from sediment, no clogging of nozzles, entire absence of decomposition, and easy and pleasant application. Each gallon makes 100 gallons of spray mixture by the simple addition of water. This firm has just issued its 1909 booklet containing 32 pages of American, British and Canadian testimony and other interesting matter which is free for the asking. In it the proprietors modestly solicit a comparative trial of their fluids by fruit growers and others, trusting entirely to their superior merits to win their way into popular favor.

Pruning Outdoor Roses.

ED. AMERICAN FLORIST:—

Will you please advise me through your columns the best time for pruning outdoor roses and shrubs, and how?

A. S.

West Virginia.

Owing to the meager information regarding the shrubbery and outdoor roses stated in the inquiry by "A. S," it is hard to answer him intelligently. It would take up several pages to touch on the shrubbery question as a beginner. And we would suggest, if there is a well kept park or private place in his locality, to carefully observe the way the work is handled therein. But if there are any shrubs to prune he should begin now before they start into growth. Regarding the roses, prune them as soon as the eyes show the first sign of swelling, and when there is not likely to be any real hard freezing weather. From March 15 to April 15 is usually about the time to handle the outdoor plants, according to the season, which may be forward or backward, and has a great deal to do with the time to handle this work,

In pruning hybrid roses such as U. Brunner, General Jacqueminot, Paul Neyron, Magna Charta and others in this class, cut them back hard, leaving three or four eyes. For the teas they usually die back close to the ground and where they do not it is only necessary to remove the dead tips down to a good eye and cut away any small twiggy wood leaving only the strong canes. Ramblers can be trained into shape, and can be better pruned in the fall or summer. Of course, if the plants have grown out of shape through improper pruning, especially the hybrid roses, and are large and unsightly, it is a hard matter to tell just how to prune them unless one was on the spot, and in this case, "A. S." must use his best judgment but as stated above, roses pruned properly are usually cut back each season quite hard, to insure a strong, healthy growth, and to keep them shapely.

E.

American Ass'n of Horticultural Inspectors

MEETING AT BALTIMORE, DEC. 29-30, 1908.

The following condensed account of the meeting of horticultural inspectors is of special interest to nurserymen. As is probably well known, this association is made up of all the nursery inspectors in the United States. The seventh annual meeting was held at the Rennert hotel, the first session opening at 8:00 p. m., December 29, 1908, with President Summers in the chair, and the following questions were considered:

How can a national importation inspection law be secured?

Committee of three appointed by the chair to take charge of promoting such legislation during the ensuing year.

Is it desirable for this association to draft an inspection law for adoption by the several states?

Laid on the table.

Is it desirable to change the present method for certification of stock sold by a nurseryman, which was not grown in his state?

In connection with this question the following resolution was offered by Dr. J. B. Smith of New Jersey, and adopted: "That a committee of five members be appointed to formulate a system by means of which the individual members of the association may notify the other members of the association of such views concerning special nurserymen, as it may seem desirable for the inspectors of other states to know." Further remarks showing benefit of the tag system as applied to this subject were made by various members.

What rule should govern the conditions of a certificate to a nurseryman in whose nursery stock San Jose scale has been found?

No definite action.

What is the present opinion regarding the dipping of nursery stock in a contact insecticide, as compared with fumigation with hydrocyanic acid gas?

The following resolution was adopted: "That it is the sense of this body that the present method of fumigation with hydrocyanic acid gas is the most approved method of treating nursery stock where there is danger of infestation from San Jose scale."

What conditions should govern the certification of strawberry plants from nurseries in which the strawberry root louse is known to be present?

The following resolution was adopted: "That it is the sense of this association that where the strawberry root louse occurs in a nursery patch, if the attack be severe, the patch should be destroyed, but if only a slight infestation, the nurseryman should be required to burn off the patch, and dip plants in tobacco water before shipping."

Peach yellows.

Resolved: "That this association recommend that nurserymen, as far as possible, cut scions from bearing healthy trees and urge proper fumigation of all propagated nursery stock used in the nursery with hydrocyanic acid gas."

Crown gall.

Resolved: "In view of the proven facts that this is a bacterial disease, communicated from one raspberry plant (and other plants) to another, that the practice on the part of nurserymen of storing raspberry plants visibly affected with crown gall with unaffected plants is extremely dangerous, and should be discontinued in the interest of fruit growing."

Election of Officers: The undersigned was elected president for the ensuing year, and Prof. T. B. Symons of Maryland, secretary-treasurer.

F. L. WASHBURN,
Inspector for Minnesota.

Farmers and Forest Tress.

We believe it would pay farmers to take advantage of the Iowa forestry law and use five acres of the farm for forest trees, says the Macon City Herald. The farmer is not confined to the use of just five acres but the minimum is five acres on which taxation will be released after the first two years. To comply with the law it will be necessary to plant on each acre 200 or more trees of any of the following kinds: Ash, black cherry, black walnut, butternut, catalpa, coffee tree, the elms, hackberry, the hickories, honey locust, mulberry, the oaks, sugar maple, European larch and other coniferous trees, and all other trees that have been introduced into the state for experimental purposes shall be considered forest trees. Under this law, willows, box elder, cottonwood, soft maple and poplars will be included under the law when they are used for protecting borders.

The law permits the removal of one-fifth of this timber per year after it has grown large enough for timber use. Five acres of fruit tree land may be exempt from taxation for a period of eight years to encourage the growing of different kinds of fruit trees in the state. Iowa is in need of groves and forest trees. This question we hear discussed on every side. It is estimated that the forest area of the country will not last more than 50 years. The time is not far off when the quetsion of tree planting will be on everyone's mind.

The Sea Buckthorn.

The sea buckthorn, or sallow thorn, is found wild in various parts along the eastern seashores of England and Scotland, says the Journal of Horticulture. It appears to covet the sandy seashore, and is very hardy, often growing close up and coming well under the influence of the salt spray. We recollect seeing a remarkable bank of sea buckthorn on the Gosford estate, East Lothian, growing behind a wall, and the spray had shorn or nipped off the young growths so persistently that a perfectly straight, oblique top was formed. The branches are simply roped with the bright reddish-orange berries, which remain on for many months. The silvery-white leaves are narrow and willow-like. The bushes flower in May on the old wood, the male ones minute, in auxiliary clusters; the female flowers solitary, on separate plants. To obtain well-berried bushes it is necessary to have both sexes side by side, or else the female flowers must be dusted with the pollen-bearing male branches. The plants can be propagated by seeds, suckers, or cuttings.

Procuring Peonies.

ED. AMERICAN FLORIST:—

Which is the best firm to procure peonies from? E. R.

There is no best firm and we can only refer you to the many firms that, during the planting season, advertise these plants in our columns.

Some of Our Specialties

	Each	Per 100
Boxwood, Pyramid shape, 2½ to 3 ft. high, very heavy	$1 75	
3 to 3½ ft. high	2.50

Utica, N. Y.

The annual banquet and trade show of the Florists' Club was held at Arcanum hall, February 18. The local members of the club and those from surrounding places including Rome, Whitesboro, Ilion, etc., with their wives and friends, were present and altogether over 100 sat down to the well filled tables. In the center was a special table filled with new varieties of carnations sent mostly by the growers. It was a fine display. After the banquet President Frank J. Baker, called the assemblage to order and acted as toastmaster. He thanked all for their presence and said the club had given evidence of its fitness for existence. He made timely remarks, suggesting that the members might extend their labors and interests by studying the diseases of street trees and leading residents who take a pride in the appearance of their residences to establish handsome lawns. His remarks were heard with interest and were well received.

Wm. Mathews was next called on and he spoke in an interesting and entertaining manner. He was followed by Seward Hakes of Ilion, who took for his subject, "Set Pieces," and talked in a businesslike way, which was highly appreciated by the florists. M. N. Gurry, who represents the Cockroft's of Northport, L. I., made appropriate remarks on business and politics and was heard with interest.

The late Louis Marquisee of Syracuse was a native of this city. Over a year ago he accepted an invitation to speak at the florists' national convention at Indianapolis, and he wrote for that occasion a poem on the carnation, which was a beautiful production. He died November 24 last, but at the convention at Indianapolis several weeks ago the poem was read and was well received. It is one of the best ever written by Mr. Marquisee and has been printed in pamphlet form and on the title page bears his portrait. Last evening the poem was read by Mrs. Spencer with good emphasis and inflection and it was greatly enjoyed by the large company present and enthusiastically applauded. [We reproduce Mr. Marquisee's poem on page 272 of this issue.—ED.] The banquet was in every way pleasant and successful. The members of the committee of arrangements were J. C. Spencer, Jesse Williams and A. R. Wilcox.

LEXINGTON, KY.—Honaker Bros. have begun the erection of three new houses, one 30x100 feet for violets, one 38x200 feet for carnations, one 28x150 feet for carnations.

It takes good, healthy plants, free from rust and other diseases, to produce a crop like this. Our plants have retained their health and vigor since the date of this photograph, which was taken three years ago. It takes healthy plants to produce healthy cuttings, so, if you want cuttings of this kind, send us your order.

SCHEIDEN & SCHOOS, 60 Wabash Ave., Chicago

Louisville.

TRADE SATISFACTORY.

The conditions of business last week on the average were satisfactory. Roses sell well and are now in better supply, with the quality fair. Carnations sell very satisfactorily and are in fair supply. The quality is very good. Violets have become very cheap and were a glut last week. The quality is very good. Lily of the valley is plentiful with a fair demand. The quality is satisfactory. There is too much bulbous stock on the market at present, and some growers no doubt will find a great loss. Green goods are plentiful with the exception of asparagus sprays, which are unusually scarce. Other stock and flowering plants are in good supply and find a satisfactory demand.

Our Pastimes.
Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.
Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At Louisville.

The Florists' bowling club met Monday night and had some very hotly contested games, Capt. Kirch's team defeating Capt. Geo. E. Schulz's three straights. Andy Brand was high with 189 and Jacob Schulz was low with 68. Following are the scores:

	1st.	2nd.	3rd.
Louis Kirch	156	100	101
James Doerr	162	141	134

Henry H. Barrows & Son, WHITMAN, MASS.

Worcester, Mass.

Business continues very good, especially the two weeks before Lent, there being quite a lot of pre-Lenten teas and other social affairs that called for flowers in quantity. Also a large amount of funeral work.

"How to Beautify the Homes of the People by Adorning the Grounds About the House," was the subject of a lecture given February 25 before the Worcester County Horticultural Society in Horticultural Hall. H. D. Hemenway, general secretary of the Home Culture society of Northampton, was the speaker, and his lecture was illustrated with stereopticon views. A musical programme was given, it including a solo by Mrs. H. L. Bryam, accompanied by Miss Louise D. Spinny, of Brockton; a trio by Mrs. L. C. Midgley, Mrs. H. F. Hildreth and Mrs. P. G. Forbes; a solo by Miss Helen Mixter, of West Boylston, accompanied by Mrs. L. C. Midgley, and a piano solo by Miss Ruth White. President Geo. C. Rice presided.

NOTES.

Benjamin W. Childs, a member of the board of park commissioners, has resigned. Mr. Childs has not been in the best of health for some time and has only recently recovered from an illness that his friends feared for a time might prove fatal. His decision to resign from the board is final and no doubt his advice will be missed.

Mark Aitken, of Springfield, has leased the store formerly occupied by W. Lewis, corner of Main and Pleasant streets, and had some very pretty window displays.

H. F. Littlefield reports business good. He has got a white sport from Winsor carnation in its second year that looks as though it would be a winner.

A. H. Lange was judge at the growers' show of the Massachusetts Horticultural Society, February 27.

R.

The Luther Burbank's Products, Inc.

San Francisco, February 26.—In order that his discoveries may be more generally distributed and incidentally that his work may not be hampered by the business worries, the brains and genius of Luther Burbank, the plant wizard, have been capitalized for several million dollars. The men who have secured the sole right to distribute to the world the plant discoveries of the Santa Rosa naturalist are Hartland Law and his brother, Herbert E. Law, two well known millionaires of this city, and Oscar E. Dinner, a wealthy eastern capitalist.

There is no limit to the rights which the men have secured except one or two small contracts which Burbank is fulfilling. Working alone Burbank has not had time to give the result of all of his experiments to the public, but now a systematic effort will be made to distribute both his past and future products to the world. One of the first things undertaken by the new company will be the fulier development of the spineless cactus, which promises to transform the desert wastes into grazing lands for cattle. In this connection it is announced that Burbank has developed a cactus capable of producing saccharine matter which will yield both sugar and alcohol.

Burbank, when asked regarding the formation of the new company, made the following statement: "It is a fact that Herbert Law and his brother and Oscar E. Dinner have secured the sole rights to the handling of my products, with the exception of a few varieties I have already sold. I am glad to be rid of the business end. It will give me so much more time for the development of more fruits and flowers." The company will be called "The Luther Burbank's Products, Incorporated."—New York Globe.

European Horticulture.

FROM THE GERMAN TRADE PAPERS.

STRENUOUS ADVERTISING.—In German magazines appears an advertisement which reads: "The Biggest Bargain ever! Grandest Wonder of Nature! The Resurrection plant! Referred to in the Bible; the prophet Isaiah mentions it! A plant that starts to grow in ten minutes and is fully grown in a day. Unsurpassed in fascinating beauty as an ornament for the parlor, and not equaled in bewitching stateliness as a centerpiece for the dining table! This plant is immortal, lives from century to century; needs neither earth nor water, cares nothing for the fiercest heat or bitterest cold; can be boiled or buried in ice; remains always fresh and green! The plant emits the most deliciously sweet fragrance; it purifies the air, keeps away moths, fleas, spiders, bugs and insects of all kinds; it destroys disease germs and allows no sickness to enter! Truly the most marvelous of nature's blessings, the most lovely of God's creations. Price 1 mark." It would be unfair to expect more of the poor little desert waif, Selaginella lepidophylla, and all for 25 cents

BEGONIA "PATRIE."—V. Lemoine et fils, Nancy, France, are the originators of the new begonia, Patrie, which in habit of growth, profusion of bloom, length of flowering season, color and size of flowers, and ease of propagation and culture is said to be the most distinct as also in every respect the most meritorious of the many new begonias vying for supremacy in the class headed by Gloire de Lorraine. This new one flowers from early in November until April.

IRIS SIBIRICA.—Elegance in growth and shape of its flowers distinguishes I. Sibirica from all other kinds of iris. There are not many varieties of this distinct and most desirable type, the color of the flowers being either pure, snowy white, or, as in some varieties, a delicate light blue. It is a splendid iris for outdoor planting as well as for pot culture and forcing.

No order taken for less than 1000.

Drake Point Greenhouses, Yalaha, Florida

PREPARE FOR EASTER

From Whom Will We Purchase Our Easter Supply?

An Immense Stock of Choice Easter Plants Now Ready for Immediate Shipment. Blooming Easter Week or Before if Desired.

"From whom shall we purchase our Easter supply this season?" That seems to be the cry all over the country. "We have tried so many already. I know what I am going to do," some sensible man says. "I shall go back to Godfrey Aschmann. He is the best and most reliable man in the business. What he advertises he has and there is no bluff about it. I tell you his usual stock of **Azaleas** can't be beat, and the **Lilies** he has this spring are the finest I have ever seen. No wonder. He imports them direct from Japan. He has a friend in Japan who looks after his interests and sends him the cream of Japan's plants. He has enough to supply all, and I tell you no lie when I say that his other plants, such as **Hydrangeas, Cinerarias, Spireas, Ficus, Araucarias, Palms, Hyacinths, Tulips, Daffodils, Etc.,** are of such excellent quality that they will make a man's mouth water, and they are so remarkably cheap that we often wonder how he can do it."

AZALEA INDICA.

We are headquarters for these plants for the past twenty-five years. We make a specialty of importing large quantities of this so well known favorite Easter novelty Grown for us in Ghent, Belgium, by an Azalea specialist. Have now three houses full of the choicest. Only well known American varieties are imported. They are planted in the fall, as soon as they arrive from Belgium, into 6, 7 and 8 in. pots, planted in greenhouses and kept cool during winter. They are now in excellent condition, covered with buds, just right for Easter.

☞ Please bear in mind facts (mostly unknown to some Azalea growers) that fully 30 to 40 per cent of the newly imported Azaleas in dormant state will lose their buds and foliage during the long transportation of the sea voyage and during winter up to Feb. 1 and have to be kept over for another year.

☞ We only ship good stock and full of buds and flowers, and therefore you can't expect Azaleas at this time to be as big and as cheap as if you would buy them in dormant state in the fall.

☞ What is the name of the best double pink Azalea? Mme. Van der Cruyssen is the name. Originated by the well known Azalea specialist, Mr. Van der Cruyssen of Belgium. Millions are raised every year and shipped into every part of the globe from Belgium. We have a big stock on hand of this well known variety. Every plant is as round as an apple, covered with buds, just right for Easter. Have all sizes for 75c, $1.00, $1.25, $1.50, $1.75 to $2.00 each.

Deutsche Perle (double white) 75c, $1.00, $1.25 to $1.50; Bernard Andreas Alba (white) we have mostly big plants of this variety, $1.50, $2.00, $3.00 to $3.50, a few at 75c, $1.00 to $1.25; Niobe (also white), 75c, $1.00, $1.25, $1.50 to $2.00 each

Vervæneana, De Schryveriana (double variegated), 75c, $1.00, $1.25 to $1.50; Dr. Moore and Memorie de Louis Van Houtte (double pink), $1.00, $1.25 to $1.50; Apollo (red), 50c 60c, 75c to $1.00; other good varieties, such as John Llewellyn, Emperor of Brazil, Talisman, Helena Thielmann, Illustre, etc., 75c $1.00 to $1.25.

When we are out of one color we send the next similar color; also if we are out of the size ordered, we send the next size, either above or below the price mentioned.

Easter Lilies. Lilium Multiflorum, the genuine Japanese Easter lily, directly imported by us. We have a friend in Japan who looks after our interests there. He picks out for us only the good, healthy ones, and marks them while they are growing, the 10-in. bulbs, and therefore he ships to us the cream of the plants of Japan. We have Lilies this year to burn; can supply, if nothing happens, every customer and others who want Lilies. If you see them growing in our greenhouses, you must all admit they are "crackerjack9"; we sell them cheap, too. Where other florists get 15c per bud, we only charge you 10c per bud for plants in 6-in. pots, having 5 8, 10 and more buds to the plant. Plants under 5 buds, 12c per bud, 6-in. pots.

Araucaria Robusta Compacta, Glauca and **Excelsa.** Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds same as when we first started. Why the Arsucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variesy, very graceful snd beautiful. Specimen plants 6-7 8 in. pots, 4-5 year old, 4-5-6 tiers 20-25-30-32 in high, same in width, $1.50 $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3-4-5 year old 4-5-6-7 tiers 6-in. pots, 20-25-30-35 in. high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

Hybrid Rose Bushes, 6-in. pots, 35-50c; **Rambler Dorothy Perkins,** etc., 5½-in., 50c; **Hermosa,** 5-in., 35c.

□ **Begonia new improved Erfordi,** 5-in., $2.00 per doz; **Begonia Flambeau** 5-in $2.00 per doz

Spirea Gladstone, 6-in. pots, 40c 50c, 75c, $1.00; Japonica Floribunda Grandiflora, 6-in., 25c to 35c.

Primula Obconica, 5-in. pots, $2.00 to $2.50 per doz.

Double Daffodils, Von Sion, best yellow, 3 bulbs in a 5-6 in. pot, $2.50 per doz. pots.

Hyacinths, 4 best colors, King of the Blues, Grand Maitre (light blue), La Grandesse (best white), Gertrude (best pink), 4-in. pots, $12.00 per 100. Now outside in cold frames. Two weeks will force them into bloom.

Asparagus Plumosus Nanus, 3-in., $5.00 per 100.

Hydrangea Otaksa, in bud, 6-7 in. pots, 35c, 50c, 75c to $1.00 each.

Cineraria Hybrida, best strain, 4-in. pots, $10.00 per 100; 5½ to 6 in. pots, just right for Easter, 25c, 35c, 50c, 75c.

Areca Lutescens, 4-in. pots, three plants in a pot, 25c.

Ficus Elastica (Rubber), 5½ to 6 in. pots, 25c; 30c, 40c to 50c.

Boston Ferns, 6-in. pots 50c; 7-in. pots, 75c; $1.00 to $1.25; 8-in. pots, $1.50.

Scottii Ferns, 5½-in. pots, 40c; 6-in. pots, 50c; 7-in. pots, 75c to $1.00; 8-in. pots, $1.50.

Whitmani Ferns, 7-in., as big as a bushel basket, 75c, $1.00 to $1.25; 9-in. pans, as big as a washtub $1.25 to $1.50.

Neph. Amerpohli, 5¼ 5½ to 6 in. pots, 30c, 40c and 50c; 6-in., 60c to 75c.

Kentia Belmoreana, 5 good leaves, 5¼ to 5½ in. pots, 25 to 30 in high, 50c to 60c; 4-in., 35c.

Kentia Forsteriana, 6 to 7-in. pots, 25 30 40 to 45 in. high, 75c, $1.00 $1.25, $1.50 to $2.00 each.

Kentia Forsteriana, 5¼ to 5½ in. pots, 20 to 25 in. high 50c, 60c to 75c.

Jerusalem Cherries, large plants, full of buds, 6 to 6½ in. pots, 35c, 50c.

Moonvines (Ipomœa Multiflora), best white Moonvine, for which we have a world-wide reputation, now ready, 2½-in. pots, $5.00 per 100.

Have an Immense Stock of Easter Plants.

Please state if in or out of pots.

☞ All goods must travel at purchaser's risk only. Cash with order, please.

Albuquerque, N. M.—Mayor Lester and a number of other prominent business men have formed a company to organize an up-to-date greenhouse plant, and stock has been placed for $25,000, the amount of capitalization. The old Huning mill site has been obtained and work will be started at once on a 15,000-foot greenhouse. Besides growing cut flowers under glass a portion of the grounds, which are very beautiful and will be improved, will be devoted to hardy flowers and nursery stock.

Scollay's Plant Sprinklers

FOR CUT FLOWER TRADE. Also the

Scollay Putty Bulb

FOR GLAZING GREENHOUSES, Etc.

The Scollay Plant Sprinkler is in its 35th year. Thirty-five years of experience should count for something—we have given attention to quality in every respect—making of seams—selection of high-grade rubber. During these 35 years there have appeared more than 35 imitations, all the way from hand levers—tee ends—breakable tops down to Chinese and Boston Blowers—and, after all, the fact remains the same, that we are still the real thing in rubber sprinklers, etc. No one is so new or old in the cut flower trade that he can keep shop without **Scollay's Rubber Plant Sprinklers.** Every sprinkler guaranteed free from imperfection in manufacture.

For Sale by All Prominent Seedsmen.

Southampton, N. Y.

The bi-monthly meeting of the Horticultural Society was held Thursday, February 18. Vice-president U. G. Ager in the chair. After the regular routine of business, B. C. Palmer explained how to grow sweet peas, and a discussion followed. Chas. E. Frankenbach gave a few points about transplanting trees, growing wild in the surrounding woods, such as cedars, mountain laurel, etc. The schedule for the next show to be held in July, was sent to every member of the society. There is hope for a keen competition. G.

PARMA, MICH.—F. G. Hubert has just built a new greenhouse here, using the material of the King Construction Co., of North Tonawanda, N. Y.

WASHINGTON, D. C.—Out of respect to John H. Small, president of the board of trade, whose father died a few days ago, the directors of that body decided February 16 to postpone the next regular meeting until March.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

Handles water at any temperature, never sticks, operation always visible. Works automatically nd absolutely reliable. Sent on 30 days trial.

MOREHEAD MFG. CO., 1047 Grand River Avenue, Detroit, Mich.

Montreal.

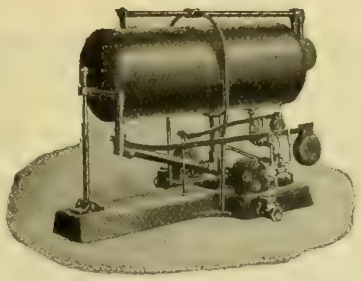
The carnival week was responsible for a good trade in this city, the hotels being crowded with visitors and numerous banquets and other functions called for decorations, both for table and hall. The weather was mostly too severe to allow any flowers to be worn outside but nevertheless the amount of sales recorded was greater by far than the previous weeks. Roses are still scarce but of improved quality: Killarney is still a great favorite with Richmond a close second. Some regard Canadian Queen as their favorite, but it is doubtful if it holds good with the public. American Beauty is considered by many florists as a gamble; they are never sure of a profit on it, as the flowers are often left on their hands; evidently the people of this city are not always inclined to pay the high price which they command. Carnations are not over plentiful but just fill the demand. Enchantress is well liked, also White Perfection and Lady Bountiful. The Lawsons seem to be dwindling away before their superiors.

Easter plants are coming along nicely, such as good lilies, but some poor, mixed lots have again been dumped on the growers this year. Hydrangeas will be nice this year. Growers who listened to Prof. Lochhead's lecture will know a remedy for the yellow foliage so common in forced specimens. The remedy, the professor said, is a lack of iron in the soil. Iron makes green leaves as well as blue flowers. Hyacinths and other bulbous stock sell well this season.

NOTES.

Hall & Robinson, during carnival week, had some blocks of ice in front of their store with tulips, daffodils and other flowers frozen inside of it, a suitable novelty for the occasion admired by many.

"DETROIT" RETURN TRAPS



"Detroit" Return Trap. (Patented)

Will keep any Steam heating system free from water making every foot hot and efficient, returning automatically all water of condensation directly into the boiler—**hot**—and without a pump.

The Greatest Fuel Saver ever Offered any Florist.

to collect an account is to place it with the

National Florists' Board of Trade

56 Pine Street, NEW YORK,

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

Indianapolis.

VERY LITTLE DOING.

Business the last week has been almost at a standstill, but flowers of all kinds are good, plentiful and cheap. Considering that Lent is upon us, the outlook is not very rosy. Bulbous pot plants have made their appearance on the market in unusual numbers.

NOTES.

Messrs. Schreiber and Ellis, of the Bertermann Floral Co., and Hyatt, of Stuart and Haugh, Anderson, made a trip to New Castle to inspect the rose-growing establishments.

Roepke & Reiman, who make a specialty of summer roses, have fine prospects for this season. Varieties grown are Kaiserin, Liberty and La France.

Bertermann's new yellow carnation is making a hit with foreign florists. E. G. Hill has a new yellow rose to match it.

Meyer Heller has left the hospital after a very successful operation.

Another new flower store has been opened on North East street.

Pecky cypress is quoted at $15.50 per 1,000 feet in this city. J.

MARLBORO, MASS.—Winthrop L. Lewis has been petitioned into involuntary bankruptcy at the instance of four creditors with claims aggregating $500.

BROOKLYN, N. Y.—A fire, February 24, in the rear of Edward Mucko's store caused a loss of nearly $500 on furniture and stock. The losses are covered by insurance. It is probable that the blaze resulted from a defective flue.

Attention!! Glass Buyers!!

—Buy Now. Next Week May Be Too Late—

Prices have advanced at factories, but we still have a large stock of fine quality GREENHOUSE GLASS bought on old basis, and which we are offering this month at ATTRACTIVE PRICES.

If you do not need glass at once, you can send a cash deposit with order, and we will reserve the glass for you.

Our Prices on Hotbed Glass Will Surprise You.

Louisiana Red Cypress

As described by Bassett & Washburn, Chicago.

"Replying to your favor requesting our experience with Pecky Cypress, we will say we have been using this grade of Cypress in our greenhouses and plant benches for the last ten or twelve years and so far have not found any of this wood that has all rotted out. We formerly used Hemlock and Pine, but found that two-inch stock only lasted about four years, while so far we have had no Pecky Cypress rot out in ten or twelve years. We use clear Cypress for all our roof work, ventilators, etc., and it is very satisfactory. We think it is the only kind of lumber for the purpose."

IT IS THE MOST DURABLE WOOD KNOWN. Ask about it at your local lumber yard or write

LOUISIANA RED CYPRESS CO. HIBERNIA BUILDING, **New Orleans, La.**

Cincinnati.

STOCK MOVING WELL.

Trade is about the same as last report. A nice line of stock is available and moving well, the only glut being in bulbous stock; sweet peas are also more plentiful and the same may be said of lily of the valley. Green goods, such as Asparagus Sprengeri and A. plumosus are shortening in supply and, as is usually the case, a good demand for same.

Weiland & Olinger's roses are coming into crop nicely and they now receive two shipments a day from their greenhouses at New Castle, Ind. Particularly worthy of mention is the fine color of Bridesmaid and their flowers of Bride are world-beaters. Any person under the impression that these two varieties are playing out ought to have a peep at this firm's roses.

John Evans, of ventilator fame, was a caller this week and Will Murphy had him in tow. Between visits to the different greenhouse establishments Will and John were keeping the pin boys busy on the different alleys. It seems as though there was a new arrival at John's home, the fourth boy, and maybe he was only celebrating.

We have a new florist in our midst, although sorry to say, only temporarily, as Miss Anna Weiland, of Evanston, Ill., is on a visit to her sister, Mrs. P. J. Olinger, of Belleview. While resting the other day Miss Weiland showed some of the boys how to make a floral piece, a la Chicago.

Wm. H. Gear, the genial over-the-Rhine retailer, is generally the early bird in the wholesale district in the morning. Billy as a rule is done with his buying and going back to the store when the other buyers arrive. He is some hustler, that boy.

Will Murphy is cutting the finest carnations of his career. To see a day's cut from his place is good for the eyes. As a side line Will is handling mushrooms and we might add that he is selling them, too.

Will Gardner and Charley Critchell are going to do the elegant at the next club meeting. It has been hinted that deviled crabs are on the bill of fare.

Wm. C. Hollstein, formerly with Hardesty & Co., is now the head decorator for the Walnut Hills Floral Bazaar. A good man in the right place. S.

Nashville.

Spring has so far opened up that the growers who have no up-town stores are coming into the market-house, where they have stalls, with fresh and vigorous looking plants and cut flowers.

McIntyre Bros., who are in the market with flowers whenever the weather is favorable, had a beautiful display.

Arnold Schmidt is a familiar figure in the market, and he deals in both flowers and vegetables. M. C. D.

Have You Heard About the Sash Bar Hinge?

It is the only hinge to use on your greenhouse if you have ventilators opening at the ridge.

CROSS FERTILIZATION OF THE CARNATION.

By the Originator of Enchantress and Beacon.

A paper read by Peter Fisher, Ellis, Mass., before the Massachusetts Agricultural College, Amherst, February 24, 1909.

Suitable Houses and Aspects.

I presume you have already been addressed on the subject of the best types of greenhouse construction and as this plays a very important part in the improvement of carnations, I will merely touch upon the subject. My preference is for a span roofed structure, with continuous ventilation, on each side of the ridge, and on sides, with raised benches, thus insuring a free circulation of air. The house may be built running north and south or east and west, as location and other circumstances permit. The east and west aspect has the advantage for about six weeks in mid-winter; the north and south about equal during early spring and fall, with a decided advantage during hot weather.

Selection of Varieties for Crossing.

Only the healthiest and most vigorous stock procurable should be used, and such varieties as embrace a wide range of self-colors are most desirable. To obtain the best results, the colors should be classified, keeping the different shades of light pink, dark pink, whites, crimson, reds, etc., together. By following up this method, a much larger percentage will come true to color in crossing than where this is done promiscuously or hap-hazard.

High Standard of Culture Necessary.

If the plants at the period of cross fertilizing, are in robust health, producing strong, vigorous shoots, which usually mean correspondingly large blooms, the seeds will invariably be large, of much greater vitality, producing strong and vigorous seedlings, from which one may naturally expect something phenomenal. On the other hand, if the parent plants are poorly grown, weak, spindling, and lacking in stamina, their seedling progeny is sure to be of like quality. The most decided results and greatest advances in my experience have always been obtained from parent plants exhibiting unusual strength and vigor.

There is not, as far as I know, any means of ascertaining before hand, just what the result of a cross will be. If crosses are made between colors of a like shade, and their progeny year after year, by continuing this method, the seedlings will, to a large extent, be a reproduction of the parents as to color. The habit of plant will often resemble either parent, or be exactly intermediate, but there is no certainty in the matter, as the most unlooked for colors appear at times, such as a pure white from the crossing of two reds, or vice versa. We can only hope and work towards the desired end, and if we stick to it long enough success will ultimately crown our efforts. One can invariably attain to anything they make up their minds for, providing they have the staying qualities, which defeat only spurs on to greater effort, and here let me tell you is the explanation for the "good luck" of many. It comes simply by "sticktoitiveness." By some I have been termed "lucky" in the production of some desirable varieties. I leave this to your own judgment.

Plenty of Patience Needed.

For instance, I worked six years, without satisfactory results, to procure a worthy successor to Daybreak. During those years I raised hundreds of a similar color, but, as the song says: "There was always something wrong." Flowers too small or too large and split, or stems too weak, plants lacking in constitution—something out of balance. In these efforts I had been using the pollen of Daybreak on other varieties. It occurred to me that I might be working along the wrong lines, so I reversed my tactics. By using the pollen of the Lawson color cerise on the variety Mrs. Bradt, a white ground variegated with red, I procured Enchantress. Lawson was raised from Daybreak, a flesh-colored variety, pollen from Van Leeuwen, a dark pink.

You see the color of Daybreak cropping out. Was this simply chance or was it the working out of Mendell's theory? There is food for reflection and careful study along these lines. Again I may say that, from a batch of first

year seedlings tested three years ago, we retained 250 scarlets for a test in the greenhouse, and today we have three left of the 250 varieties, with the possibility of disseminating one. Of the remaining 3,250 we retained four, with a possibility of disseminating two or three at most. Think of it, four out of 3,500; then tell me where the luck comes in! Yet a few years ago hundreds of those varieties so discarded would have been called wonders. It is owing to the present high standard of the carnation that it becomes more difficult each year to produce a decided acquisition. Yet, looking backward through the earliest years of my experiments, I can see where I discarded many a fine carnation through this critical sifting down. Still it is much better to be on the safe side.

Time to Commence.

The best time to commence cross fertilization is during late October or early November, that is, just after the disappearance of flies and bees that usually come into the greenhouses on the approach of cold weather. Pollen at this season is also more plentiful than during December, January or February. The best time in the day to cross-fertilize is from 11 a. m. to 2 p. m., the earlier the better (providing, of course, that the day is warm and sunny and the pollen perfectly dry). In transfering the pollen, some use a magnifying glass, camel's hair brush and pair of tweezers. I have never used either, until recently when I found it necessary to use eye glasses. I do not believe in the method practiced by some in removing the petals of the flower when half developed, as I think it injurious to the normal development of the other important parts of the flower, so essential to success. My custom is to split the calyx in three or four places, so that the petals can drop down around the stem, thus leaving the pistil, stamens, anthers and stigma fully exposed to light and air. The stamens can in this way be easily removed between the thumb and finger (forefinger) with the anthers and pollen intact, and transmitted as desired.

In using the camel's hair brush for conveying the pollen there is danger of getting it mixed, as it is difficult to clean the brush before using on a different cross. In crossing, one should always have a definite object in view—an ideal to work up to. Keep in mind the very best of the various types now in existence, also their defects; then go to work with a determination to excel. The first requisite, and one to be always kept in mind, is a healthy, vigorous constitution, that means disease resisting. Next comes color, always indispensable, for no matter if all other points have been obtained and the color is undesirable, the plant is only good for re-crossing, because of its desirable habits. Then one must work for the necessary stem and strong calyx to hold the flower erect. Size, form, substance and, last but not least, fragrance, must all be considered. Fragrance I regard as indispensable. The process of cross-fertilization is so simple that I need not go into it in detail.

Proper Stage for Crossing.

One must study the various varieties to be used, and fine judgment is sometimes required to know when the flowers have reached the proper stage for the experiment. In some varieties the pollen is perfectly ripe and ready for use as soon as the flower expands, while in others it does not appear for several days after the bloom develops. On the ends of the stamens are the anthers which, when they burst, produce the pollen. When ripe it is in the form of a powder. The stigma is the part to which the pollen is applied, and as it reaches the proper stage for fertilization the upper surface assumes a rough, hairy appearance. It is now ready for crossing, and upon this surface the pollen should be spread, being careful that it is properly ripe and dry, when it will be seen to adhere easily. If fertilization has taken place, the petals of the flower will wilt and fade within from one to two days, and often in a few hours, which is a sure indication that the operation has been a success.

After the petals dry up, they may be removed without danger of injury to the seed pod forming, and to prevent accumulation of moisture which might otherwise cause the pod to decay. Flowers fertilized early in October and November will usually ripen their seed in about six or seven weeks. Those crossed in December and January and February require eight to ten weeks, and those in March about six weeks.

Hat Trimmed with Natural Flowers.

Gathering and Sowing the Seed.

The seed pods should be picked with four to six inches of stem attached, carefully wrapped in paper, or enclosed in envelopes and allowed to dry thoroughly. This usually requires about two weeks. The seed should then be carefully removed and planted at once. Flats thoroughly drained with a layer of one to two inches of ashes, over which a like quantity of sifted loam of a light sandy nature has been spread, makes an ideal compost. Level off carefully, press moderately firm, sow in rows one to 1½ inches apart and ⅛-inch deep, which can be made by pressing a narrow strip of wood into the soil—cover carefully with about ⅛-inch soil, water with a fine sprinkler and place upon a shelf in a light situation out of the reach of mice, who are extremely fond of carnation seed. One mouse, if he gets busy, will destroy hundreds of seeds in a night. This happened to me one season when I had sown the seeds in 4-inch pots, which were placed on a bench, and I had omitted to cover them with a sheet of glass, as was my custom then. I lost almost an entire season's seeds by my neglect, in one night, and I confess I did not feel very kindly toward that mouse next morning.

After Treatment.

Great care should be taken to keep the soil moderately moist. If the sun is bright, a paper should be spread over the flats during the day, and removed towards evening. This prevents too rapid evaporation. The seed will usually germinate in from four to ten days, when all shading should be removed and the flats kept in a light airy position free of draughts. It requires good judgment in watering to prevent damping off by excess of moisture, or injury by becoming too dry. When the seedlings have developed their second leaves, they should be transplanted into small pots or flats; I prefer the latter, as there is less danger of a check by becoming too dry. They should be kept in a light airy position to insure a compact growth, in a night temperature of 45° to 50°. Then they can be planted in the field during May, when danger of check from frosts has passed. Plant in rows similar to general varieties. Those making a compact, bushy growth should not be stopped back but allowed to bloom, to determine whether they are worthy of being transplanted into the greenhouse later for a further test. Those inclined to run up with a single stem and no side growths should have the centers pinched out, so as to induce a bushy growth, so valuable later, should the variety prove an acquisition. The idea of encouraging the seedlings to bloom early is to be able to select from the field those worthy of further trial in the greenhouse. This enables one to save much valuable space that might otherwise be taken up by worthless sorts.

Selecting the Seedlings.

In selecting seedlings from the plants that have flowered in the field, only those developing desirable characteristics should be taken into the greenhouse. The usual results from a batch of seedlings raised from the ordinary commercial varieties is 50 per cent singles, 35 per cent splits or abnormal blooms, 15 per cent non-spliting. These figures sometimes vary to less singles and more split blooms. It is often desirable to save single varieties exhibiting profuse blooming qualities and healthy, vigorous constitutions. Select those with a strong, well-formed calyx, and wide petal; make the single variety the seed bearer, using pollen from extra double and even split varieties. Later I may be able to give more definite data from experiments in this direction. Beacon is the first variety I have disseminated, raised from a single yellow variety crossed with a double scarlet seedling. The selection of desirable colors is a very important matter. One is apt to get enthused about some particular shade, prejudiced in favor of his own, so to speak, for you know every fellow usually "thinks his own crow the blackest."

The buying public are, after all, the real critics, and I have found it to be a pretty safe rule to abide by the taste and selection of the ladies, as they inspect and comment upon the various shades of color, in the seedling house. I can well remember when Enchantress was in its second year with some 35

plants in bloom, the ladies used to stop and exclaim "Magnificent," "Exquisite." Of course a smile of satisfaction on my part was the result, as I thought, "Here is a winner." In conclusion, let me urge upon you to get all the theory you can, put it into practice, but don't stick to any man's "say so." Work with a definite object in view. Keep careful notes, watch results, and keep before you as a watchword and guide to success, first, last and all along, the word "selection."

THE RETAIL TRADE

WITH this issue appears our sixth supplement. Are you placing them in a folder where they will make a useful and valuable album for your counter sales?

Cross and Crown.

SEE SUPPLEMENT WITH THIS ISSUE.

The design figured herewith is one that has been popular for many years and is likely to be so for many more for when well carried out it is very beautiful. The individual cross and crown figured was made of Bride roses and adiantum and contains some very good work. We may suggest as an improvement to those about to construct such a design that the upper arm should have been lengthened a little while a few less roses on the lower arm would have given a rather better outline and a more artistic finish. As will be noted, the artist has kept his flowers well apart so that each rose tells and this is good policy as it saves stock and gives a better effect.

Various combinations may be used in this design. We have had a splendid effect by using cattleyas and Adiantum Farleyense on the cross, the crown being of solid violets. This gives a sharp distinction between the two and is effective and rich. The base was filled with ivy and Adiantum Farleyense with a cluster of cattleyas in the left corner. Another lovely design was made of Lilium longiflorum on the cross and the crown of Marie Louise violets both made solid. The base was of green galax and Asparagus Sprengeri with a cluster of lilies on the left and a clump of mignonette on the right. Pansies again may be used in many delightful combinations and there are fine effects to be had from carnations and various roses, but these will vary with the season and will at once suggest themselves to the florist of taste who has the stock at hand. S.

Hats With Natural Flowers.

Ladies' hats trimmed with natural flowers are among the novelties displayed in Chicago, Marshall Field & Co. having taken this means of attracting attention to their spring millinery display. As the suggestion may be of some value to retailers in the way of advertising their own craft, we show herewith one of the hats displayed and will describe some of the features of the exhibit.

Three ordinary, upright glass cases were used and arranged to give a woodland effect. The first one showed, beside the bonnets, a floral parasol. This was made up of the so-called air plant and Asparagus plumosus with violets and pink azalea blooms to add color. On the handle were the same flowers attached with a long white ribbon.

The hat shown in our illustration is an effective design with a ground work of air plant and Asparagus plumosus. The pink and white roses are well foliaged and the color effect is heightened by a sparing use of Trumpet daffodils and Paper White narcissus. As in the parasol and the hat just described the air plant is most liberally used as the ground work for practically all designs. Asparagus plumosus or A. Sprengeri are used in conjunction with the same to vary the effect. Another hat was trimmed with white roses, white sweet peas and purple pansies.

Very effective was one design with white and Enchantress carnations, those in front standing erect with a gradual rise from the rear. Another was of tradescantia with sweet peas circling the hat like a band with two bunches of violets at one side. Another hat in which tradescantia was used with the air plant showed a single bunch of violets with small sprays of Roman hyacinths.

A hat showing the use of a growing plant was trimmed exclusively with pink primulas on the usual ground work of air plant. A long pink ribbon trailed behind to heighten the general pink color effect. Somewhat on the same order of hat was one using well fruited strawberry plants, Paper White narcissus and red carnations. This was the only hat in the exhibit using the traditional bird in the trimming.

It will be recalled that a Merry Widow hat design was shown as a supplement in the AMERICAN FLORIST, issue of February 20. Such a design, or possibly an arrangement of two, or three, or four, as described above, could be used as a very effective window attraction for the approaching Easter season. And it may also be possible to secure good advertising results by arranging such an exhibit in some well located milliner's window, a neat card giving name and location of the florist furnishing the flowers or decorations as the case may be.

BRIDE'S SHOWER BOUQUET.

By Graser & Humphreys, Mt. Sterling, Ky.

Fine Bridal Shower Bouquet.

Roses, lily of the valley and orchids are the principal flowers used in the well arranged bridal shower bouquet herewith illustrated, and they are effectively and well put together. Graser & Humphries, of Mt. Sterling, Ky., were the makers of this shower, which was used

at an important local wedding. This firm has quite a good repute for high class work of this kind and the natural and pleasing arrangements it puts up give great satisfaction to its patrons.

La Grange (Ill.) Floral & Seed Co.

One of the tastiest and most attractive flower shops in northern Illinois is that of the La Grange Floral & Seed Co., Walter Scott, manager. La Grange is one of the largest of the Chicago suburbs and on a prominent street and in a new building, not yet quite completed. Mr. Scott opened his store on February 19. In his first window decoration he showed a life size wax figure, carrying a well made-up basket of white carnations, Bride and Richmond roses and adiantum. At one side of the figure was a large plant basket containing an arrangement of primulas, latanias and Asparagus plumosus. A couple of vases of roses, a vase of Enchantress carnations, a few plants of Otaheite orange, and a background of palms, ferns and araucarias, completed the arrangement. This window was a constant attraction to the people of the town, especially on Sunday, February 21, the bright sunny day being particularly favorable to the purposes of any well arranged window display.

The wax figure shown was one of the best money could buy, and instead of being a constant feature will only be used for special occasions, as, for instance, showing a typical spring girl in an Easter arrangement soon to come. Mr. Scott has demonstrated in this window what might be called a form of cooperative advertising, the wax figure being able to obtain the tastiest and most fashionable hats and gowns for the mere placing of a small card giving the name of the tradesman or tradeswoman supplying the same, and the ladies of the town, while admiring the millinery, etc., become interested in the flowers.

And the beholder, in the event that he or she has been given such an impulse by the display to step inside and buy, is not disappointed by the interior arrangement. Here the 12½x50 feet of space has been laid out with a view to the greatest possible convenience and attractiveness. A case with glass sides and top serves as a counter for the effective display of cut flowers or plant novelties. About the room are shown various designs of plant boxes, many of them appropriately filled with ferns, palms, Otaheite oranges, etc. Quite a large aquarium, well furnished and well stocked, is also included among the appointments of the store. At this season of the year appropriate space is devoted to the seed department of the business.

Sweet Peas and Asters for Market.

ED. AMERICAN FLORIST:—

What are the best varieties of sweet peas and asters in solid colors for selling in the market? E. R.

Among the best varieties of sweet peas the following easily head the list: White, White Spencer; shell pink, Countess Spencer; lavender, Lady Hamilton; red or scarlet, Queen Alexandra. In asters the list below will fill the bill for early midseason and late: Early Wonder in white and pink, Crego's Giant Comet, white and shell pink; Late Branching, azure blue, deep rose, white, shell pink and lavender. F. B.

Gardenia Culture.

A paper read by Wm. Kleinheinz before the Florists' Club of Philadelphia, March 2.

The best time for propagation is January and February. Select cuttings from strong growing, healthy plants. I have experimented with propagating in sand, in half peat and half sand, and in a mixture of fine chopped sphagnum moss, peat and sand in equal parts, and have found this latter mixture the best, producing the strongest roots. It is very important to give sufficient heat, say 75° to 80° bottom heat and 70° to 75° on top. Syringe two or three times a day, protect from the sun, and never allow any draught to strike the cuttings.

Under this treatment the cuttings will be rooted in from 20 to 25 days. Then the young plants must be potted into 2-inch pots in a mixture of half peat and half well-rotted compost. Never allow them to get dry, and protect from the sun for three or four days. Keep the house at a temperature of 68° to 72° at night and 75° to 80° by day, for about one week, until the young roots are coming through the soil, then commence to reduce the temperature to 65° to 68° at night and 72° to 75° by day, and the young plants will soon begin to grow. In from three to four weeks they will be ready for a shift into 3 or 3½-inch pots, and the shifting must be continued as often as necessary. Never allow the plants to get pot-bound. All the buds must be removed to secure a good, healthy growth.

In July the plants should be in 5- or 6-inch pots, and this is the time to plant on benches. Be sure to have good drainage in all cases, especially in the benches, as this is a very important item. The soil must be one part rough peat and two parts well-rotted compost, with a little sand. I find it well to mix a little pulverized sheep manure with it. The distance to plant is about 12 to 15 inches each way, but great care must be exercised in planting, to see that it is not done too deeply, as the young, fibrous roots always run on top and these are the ones to take care of. Plant solidly, but not too firmly, and leave a little drain around each plant, so that every one can be watered separately. Two weeks after this the bench can be leveled off and packed some, but not too firm, to give the water a chance to run through the soil quickly.

From September on the critical time begins, as the plants will now show buds, and we all know that the most difficult part of flowering gardenias in winter is to keep the buds. Great care must be exercised from then until February. The falling of buds is caused by irregular temperature, over-watering, running too dry, and by syringing with very cold water. Great care must be taken to avoid these mishaps. The night temperature should be 65° to 68° as nearly as possible, but never below 65°, and by day should be about 10° higher. As soon as the fibrous roots show on the surface a light top dressing of half compost and half sheep manure must be applied, and repeated as often as necessary. This is one treatment under which I have grown gardenias with success, but I have tried another way also, with good results.

I have been growing my plants up to 7-inch pots under glass all summer. By August 1 I removed the glass and kept

FLORAL EMBLEMS AT FUNERAL OF THE LATE E. V. HALLOCK, MARCH 6.

Lilac, Lily of the Valley and Croton Leaves. From the Executive Board, S. A. F. (By Young & Nugent.)

the plants without glass until September 15. This ripens the wood and the flowering buds can be found at the end of each growth by this time. The plants have to be moved under the glass again when the nights get cooler. I have planted a bench, when the plants have been treated in this manner, by October 1 and cut a very fine crop of flowers from December 15 on. This method gives anyone the chance to have gardenias in succession if they have different houses to plant in rotation, as you can hold them in a cool house at about 52° to 55° at night, until wanted for forcing.

By planting in the bench, it is understood that I mean to give them the same treatment as in the first method. The varieties grown are principally Veitchi or Florida and Floribunda. Gardenia Fortunei produces larger flowers, but is more suitable for summer flowering. All plants have their enemies, so, also, has the gardenia. The worst of all is the mealy-bug. Syringing with a mixture of Lemon oil and Rose-leaf keeps them in check, but the best and surest remedy is prevention. This can be accomplished only by heavy syringing with a good force of water, in summer three times a day, and, as the days get shorter, one or, on bright days, two applications.

WITH THE GROWERS

Emil Buettner, Park Ridge, Ill.

We recently visited the range of Emil Buettner at Park Ridge, Ill., and it is a very long time since we saw a neater, cleaner, or more prosperous looking lot of houses. Everything was in the pink of condition and the color on the carnations was remarkable. About 60,000 plants are benched here and some of the varieties were hardly recognized, so much finer in color were they than some we have recently seen. The old Lawson, for instance, was simply magnificent and a great mass of fine flowers and buds. Winsor, too, was in excellent shape, the characteristic stiff stems being topped with flowers of the most delightful pink and of great size for this variety. Other varieties, such as White Perfection and all the more popular kinds are grown, but we were particularly interested in Lady Bountiful. The flowers were the purest white of any we have ever seen and in such order it is certainly a grand variety. Whether it is the pure air of Park Ridge, the soil or the treatment, we are not prepared to say, but certainly the stock is magnificent in every respect.

About 15,000 Easter lilies are grown here for that holiday, but no attempt is made to keep up a succession at other times. The plants looked fine and they were being sorted into the different sizes when we were there, the most favored being taken to a cool structure, those behind being given more heat. Multiflora is the variety grown. Bulbous stock, outside of these and a few narcissi, is not much grown. We were much interested in the houses devoted to lilac. The plants are grown in small, narrow structures and heavily shaded at first. As the flowers show color they are brought to the lighter, unshaded parts of the house and given more air and a lower temperature. It is interesting to see the plants in all stages, from the swelling buds to the finished flowers and the time taken is about one month. Roses, principally Killarney, Richmond and Bridesmaid, were in excellent order, flowering freely and with flowers of extra fine color, like the carnations. Not a dead leaf or bit of rubbish is allowed about the place, which is a marvel of order and tidiness from end to end.

FLORAL EMBLEMS AT FUNERAL OF THE LATE E. V. HALLOCK, MARCH 6.
Cycas Leaves, Carnations, Violets and Freesias. From the New York Florists' Club. (By Meyer.)

Mrs. Mary A. Reissig, Riverside, Ill.

A fine new range of glass in the pink of cultural condition is that of Mrs. Mary A. Reissig of Riverside, Ill. On July 6 last, Mrs. Reissig took over the personal charge of the place she had long leased to other growers and her remarkable energy is evidenced by the fact that within three weeks time she had started to pull down the houses and in good time before the first frost had a range 140 by 175 feet completed and planted, and the new Number 14 Kroeschell hot water boiler installed ready for firing. The range consists of six 150 feet houses, of material furnished by the Foley Manufacturing Co., one 20 feet wide, one 26 feet wide, three 15 feet wide and one 32 feet wide. Along the ends of these houses run two leantos, one being 15 feet wide and that on the other end being 10 feet wide.

This new range is on the identical site of one erected in 1873 by the late Charles Reissig, who at that time built five houses to which additions were subsequently made until his glass surface reached 50,000 square feet. In 1891 he retired from the active management of his business and rented his greenhouses, which arrangement continued until his death on February 24, 1892. Mrs. Reissig continued the same policy, leasing her greenhouses to various growers. About 10 years ago she tore down the old range and rebuilt, with Schmidt & Meyer in charge.

Last summer she determined to re-enter the business and rebuilt once more as stated above. The place throughout is in the best of shape. A notable sight is that of one complete house of callas, there being in this house over 1,000 plants, and such success is being had with these that they will easily average four flowers to each plant, some running as high as six flowers to the plant.

Sweet peas for spring flowering are also a feature here, two benches being devoted to this crop. The principal varieties grown are Blanche Ferry and Gladys Unwin (pink), Emily Henderson (white) and Lady Hamilton (lavender). These are looking fine for Easter cutting. Close by is a bench of candytuft, the young plants coming along nicely for flowering by Doceration day. The principal crop is carnations, there being about 10,000 plants, Lawson, Lady Bountiful, Enchantress and Red Lawson being the varieties grown. O. P. Bassett will be grown next season, 1,000 plants of this fine new red seedling having been ordered. Some White Enchantress and White Perfection will also be grown.

Mrs. Reissig grows about 3,000 bulbs, including Roman hyacinths, Narcissus Paper White and N. Von Sion (single daffodils). The daffodils have all been cut out. About 2,000 freesias were also grown, the season being from about the

middle of January to the middle of February and they were fine while the season lasted. There is also a miscellaneous stock of palms, ferns, geraniums, begonias, vincas, pansies, etc., for planting outdoors. In their season chrysanthemums are also grown. Asparagus Sprengeri occupies some bench room for cutting.

This range of glass and the old home which Mrs. Reissig still occupies is set in the midst of a plot of 15 acres of land, part of it is the well known Reissig grove, of oaks, walnut, hickory, etc., the scene of many florists' picnics, and other kindred events. Just outside the greenhouses are grown asters and peonies. The place was once famous for its imported hybrid roses which Mr. Reissig had selected in Europe and were long the finest of their kind in this part of the country.

Chas. Ehrhardt, Park Ridge, Ill.

At Park Ridge, Ill., Chas. Ehrhardt has a neat and well arranged plant principally devoted to violets. When calling on him recently he was picking fine Princess of Wales and California, the principal single varieties grown. Mr. Ehrhardt has three new houses, altogether 71½x100 feet, built last summer, of material from the John C. Moninger Co., of Chicago, and he speaks highly of the excellent fit and quality of this material.

After the violets are over the houses will be planted to asters, some of the early benches being already planted. He grows about 30,000 of Carlson's White and Carlson's Pink and these produce fine flowers with 14-inch stems. Double violets are not much grown, but we noted a few Farquhar. Mr. Ehrhardt does not consider his soil suitable for the double varieties. It seems a fairly good holding soil and we can answer for it that it sticks well to the shoes, the day we visited here being a "soft" one. The place is well arranged, and it is a clean and well managed little plant, the proprietor himself being actively engaged.

Verbena Cottage Greenhouses, Westfield.

The Verbena Cottage Greenhouses at Westfield, N. Y., is an enterprise that has grown rapidly. W. B. Woodruff is the proprietor and when a mere lad in 1867—he commenced raising early vegetables and plants in a 3x6 hotbed, disposing of his produce to neighbors. He always found a ready market and, by means of book canvassing and other methods, he gradually increased his sash and eventually secured a greenhouse, his total of glass in 1870 being 180 square feet which he practically built himself. After many disappointments, squarely met by the young horticulturist, he found himself on his feet and has now about half an acre under glass, eight acres of land, a fine dwelling and large barns, coal sheds, etc.

Violets at one time were grown but the spot got so bad that he had to relinquish their culture and he turned more largely to pot plants. Verbenas—as may be gathered from the name of the place—were largely grown during the time they were popular, as many as 8,000 each year being shipped all over the United States. Mrs. Woodruff is greatly interested in the business and her innate love for flowers makes her a splendid hand at all kinds of decorations and designs of cut flowers of which there are seldom enough to meet the ever increasing demand. Besides looking after his home business Mr. Woodruff has charge of many private places and parks and is noted for his geniality and good business ability. The water supply is from two deep wells pumped by a windmill and hot air engine. Cattle are kept to provide manure and the place is heated by hot water. Coal is purchased annually in April, at the cheapest time, and the soil is stacked in August, a maxim of Mr. Woodruff's being "always be ahead of time."

R. B. Hayes, Shelby, O.

The establishment of R. B. Hayes at 68 to 71 South Gamble street, Shelby, O., is composed of eight houses, 100 feet long and 15 to 20 feet wide. He has 16,750 square feet of glass, all 16x16, and the houses are all cypress construction. The houses are connected and the gutters are 6½ feet in the clear. A gravity steam system is used, and natural gas for fuel. A Standard pumping engine with a Kewanee tank attached furnishes the water supply for greenhouses and residence. By connecting the cooling cylinder from the discharge back to the suction pipe it tempers the water for use to 60° in the coldest weather.

The benches are solid, except 20 feet at the east end, where they run over a basement story that has the boiler, coal room and store room under. Mr. Hayes certainly has a very up-to-date place, as he keeps abreast of the times and is considerably ahead of most growers. Everything is in the pink of condition, carnations, roses, lettuce and other crops growing in soil that, he tells me, has been in the houses 15 years. Mr. Hayes does some hybridizing of carnations and has several good ones. No. 93 is a white, three inches and over, a cross between Flora Hill and Enchantress, a non-burster, good constitution and fine keeper. No. 1061 is a fine red, 3 to 3½ inches, a good grower, good keeper; 32 plants last year produced more flowers than 250 Flamingo in the same bed for Christmas. No. 96 is of the color and habit of Enchantress, and does not burst, and 1105 and 1103 are pinks of the Lawson shade. He also grows Enchantress, Rose Pink Enchantress and Boston Market, besides his seedlings, and they are all looking fine. He does a wholesale and retail business, and his stock has a good reputation over this part of the state. Shelby being located at the junction of the Big Four and B. & O. railroad the shipping facilities are good. His latch string is always out to visiting florists. C. W.

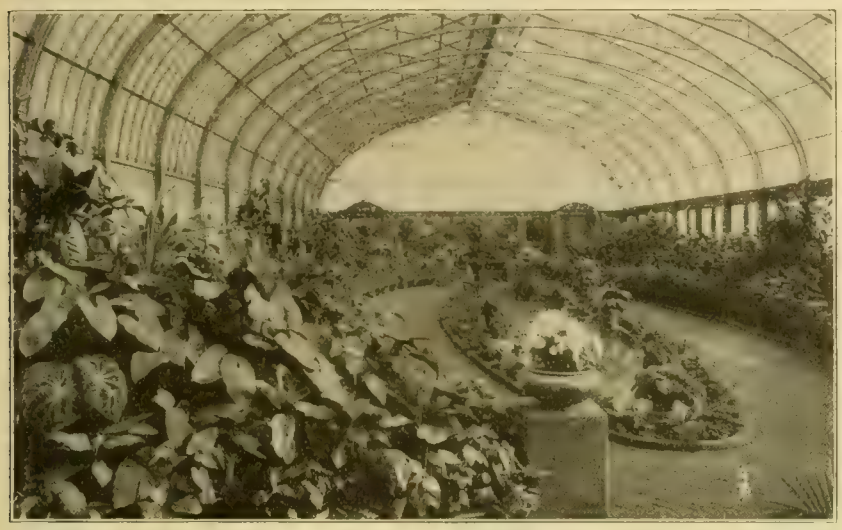
FLORAL EMBLEMS AT FUNERAL OF THE LATE E. V. HALLOCK, MARCH 6.
Violets, Lilies and Leucothoe. From the Chicago Florists' Club. (By Young & Nugent.)

Garfield Park, Chicago, Conservatories.

The large conservatories at Garfield park, Chicago, are now very attractive, the plantings of palms, ferns and other subtropical and temperate plants having made a good growth during last summer and fall and a large number of ornamental foliage and flowering plants having been grown in the adjacent propagating houses for purposes of decoration. It is of course much too soon as yet for the full beauty of the planting scheme to be seen. Time only is needed, however, as the plants have been well laid and Gardener Sells has his plants well in hand. Many of the smaller palms will have to be taken out later when they begin to get crowded and then the fern

vistas and the pretty views of the fernery through the large house will be at their best.

There will be considerably more variety in the plants here than is usual in such places and it is to be hoped that as they develop their proper size and habit, which they have plenty of room to do in this immense structure, that a good system of labeling will be kept up so that the public may see and take an interest in the many plants of economic value as well as decorative such as the bananas, cocoanut palms, various rubbers and others. Entering the large house from the east side there are fine banks of flowering plants such as azaleas, cinerarias and bulbous stock that give a very bright bit of color here, while winding walks lead to the sunken fernery and indoor water garden where various water lilies and lotuses are flowering finely.



FOLIAGE PLANTS AT THE CONSERVATORIES, GARFIELD PARK, CHICAGO.

In the other house figured there is a very varied collection of all the leading fine foliage plants and in the house devoted to flowering plants alone, there are many beautiful orchids and other seasonable flowers. Of the former, Cattleya Trianæ, Calanthe vestita, Oncidium sarcodes, Dendrobium Wardianum, Phaius maculata, Phalænopsis Schilleriana and others are flowering freely, but we would like to suggest a few more ferns of graceful habit being introduced as a foil to the orchid flowers. The New Holland and semi-hardy plants and conifers in another annex are growing into shape nicely and will be an interesting feature. We only had time for a hurried look into the propagating houses but here everything was in first class order. Large numbers of foliage and flowering plants, bedding stock and orchids are being prepared to keep up the display in the large structures and the need of these houses is now only too apparent. While everything outside is dull and dreary these fine houses are a splendid place for the public to visit and that they are appreciated is shown by the number of visitors one can always see there.

TRENTON, N. J.—Local posts of the G. A. R. have united for the purpose of sending a floral boat down the river from this city on Memorial day, following the example of the veterans of Easton, Pa. The boat will be named New Jersey, and on its trip will be kept close to the New Jersey shore.

HARDY HERBACEOUS PERENNIALS.

The Iris and Its Culture.

While the genus iris is confined almost exclusively to the northern hemisphere ranging from the Atlas mountains in northern Africa to a latitude of about 40° north, the iris family is closely represented in the tropics by the moræas and maricas, similar in effect but botanically distinct; while crocus, gladiolius, freesia, tigridia and ixia are familiar genera and serve to represent the family in all parts of the temperate and tropical world.

The genus iris, or, as popularly known, the fleur de lis, rainbow flower or poor man's orchid, contains more than 170 described species, according to J. Woodward Manning in a paper read by him before the Massachusetts Horticultural Society, of which about 100 have been cultivated at times by American horticulturists, while somewhat more than 130 species are grown by English iris fanciers, but some of these fail to combine sufficient distinction, beauty or ease of culture to warrant their extended use. While, perhaps less than 100 species are to be recommended for cultivation in American or particularly New England gardens, this is but a fraction of the number of varieties which by selection or cross fertilization have been produced and contribute most advantageously to garden ornamentation.

The question of the best species, their peculiar requirements, if any, their ornamental and color effect, the improvement of their varieties and their season of bloom are matters of interest to the flower lover. It is possible, too, to very materially extend the period of bloom as compared with the usual results attained. Such irises as figure in horticultural uses are divided into two classes, those of bulbous nature and those with rhizomes, the latter varying in this character from the conspicuous surface rhizomes of the very familiar German iris to very narrow, inconspicuous, subterraneous types of rhizome in which the roots are the more conspicuous.

The bulbous irises are most familiarly known as English and Spanish, both of which have been very greatly improved by selection. The English iris (I. xiphioides), grows 18 to 24 inches high and bears two or three flowers on a stalk. These vary in color from the purest white form, Mont Blanc, through shades of lavender, blue and purple, of which later color Lord Palmerston, with deep rich crimson purple falls and purple-claret standards, is perhaps the best. Many too are showily striped, flaked and blotched with shades of richer colors than the general tone of the flowers. The Spanish iris (I. Xiphium) has taller and more conspicuous standards than the last and the markings are more clearly defined on the falls than is the case with the English iris; possibly the improvement by selection has covered a longer period with the Spanish

VIEW IN THE LARGE NEW CONSERVATORY, GARFIELD PARK, CHICAGO.

iris. In any event such a variety as Thunderbolt is very noteworthy in its comparatively large flower and it grows two feet or more high. The flowers are richly colored bronze, with a remarkably broad signal patch of yellow on each of the falls. The better varieties of this class are Blanche Superba, of purest white, Golden Cup, a very popular yellow and Cantab, of ultramarine blue, with orange blotch and dark blue standards.

Both English and Spanish irises are of easy garden culture, planted in autumn, the English iris requiring the greater moisture of the two, the bulbs being planted at a depth of from three to five inches while a mulch is an advantage. There are a few other species of tall growing bulbous irises, such as I. juncea and the rare I. Boissieri, but they probably are seldom imported and do not compare horticulturally with the selected varieties of the last two species.

The dwarf bulbous species are most familiarly represented by I. recticulata, a native of Palestine, varying somewhat in type but gorgeous in coloring with its brilliant shadings of purple and gold and a delicious violet fragrance. Flowering as it does naturally in March our climatic conditions require its cultivation in frames to protect the flowers from staining by dampness, though it is hardy and can be used very advantageously in rockeries or in protected, sunny situations within easy access to the house. The Armenian iris (I. Bakeriana) is even earlier, but less showy, though of rich markings of purple and orange in connection with its general blue tone. I. Vartiana is another species from Asia-Minor, but more difficult to manage than the others and more tender.

Another class of bulbous species are known under the name of Juno irises, natives of the Caucasus, Afghanistan and northern India. They have comparatively large bulbs and require well drained situations and a thorough sun baking in summer to insure their continuance and future flowering. They have generally leafy stems with several flowers closely set to the stalk and combine all the ranges of coloring in the family. They closely follow the last group in their flowering period, but their inadaptability for cutting and the peculiar cultural conditions they demand without particular increase in their color range fails to promise much for their culture in American gardens except to the fancier. Of them I. Rosenbachiana, I. Sindjarensis and I. Assyrica are perhaps the best.

ELKHART, IND.—Henry Schenk, proprietor of the greenhouse north of the city, Charles Schenk and their sister, Mrs. W. H. Troyer, who left here for Dayton, O., March 2, in response to a message that their mother was dead, received a second message just before starting that their brother was also dead at the same place.

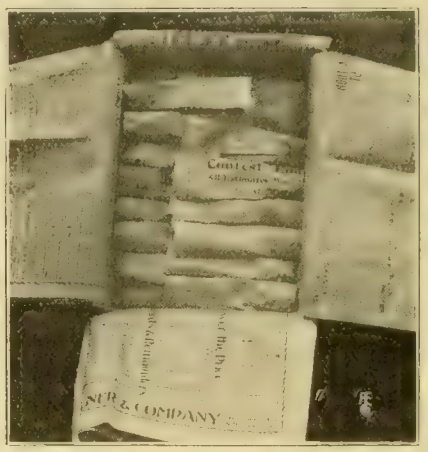
WHITMAN, MASS.—Under a foreclosure of mortgage the Barrows greenhouse property passed March 2 into the possession of J. R. Callahan & Co. of Bridgewater. Negotiations are now in progress to take care of the interests of H. H. Barrows, and it may be possible that the property will again come into his possession. The property has been the subject of some contention of late.

CHRYSANTHEMUMS

Packing Plants.

This subject may be of little interest to the majority, yet it is just as important to have the plants reach the customer in good condition as it is to produce good plants. When there is danger of freezing, the box in which they are to be packed is lined with old newspapers to keep out the cold. How many thicknesses to use will depend upon the severity of the weather, but usually from 6 to 12 will be sufficient. We receive many packages which reach us in good condition, when they have not been securely lined, but sooner or later such a shipper will sustain a loss.

When a package is turned over to an express company the shipper has little



Chrysanthemum Plants Properly Packed.

conception of what route, how many times it is to be transferred from one road to another, how long it may be on the trucks waiting for a late train and the weather conditions at distant points. For this reason it is wise to be on the safe side. We lined a mail package with six thicknesses of paper, wrapping the whole with cotton wadding and this package is the only one reported frozen this winter. The same party sent us a package by express using but three sheets for lining and it arrived safely. We merely mention this to show how little we know regarding the conditions which exist after the shipment leaves our hands.

Plants to be shipped should be thoroughly watered, turned out of the pots, wrapped tight in pliable paper to keep the earth intact. They are placed in rows close together on their sides with the ball of earth next end of box. This is followed by another row in which the ball is placed next to that of the first row. This operation is repeated until the bottom of the box is covered. The next tier is reversed by beginning at the other end of the box. The main object is to pack so closely as to prevent them from shifting. The illustration shows how the box will appear after the plants are in position. Should there be an intervening space between plants and lining, fill it with excelsior, sawdust or some other light material, so that the plants cannot move if the package is turned upside-down.

We find there are many who evidently fail to recognize this most important factor. Of the few details incident to this operation this is really the one upon which success or failure depends. They may be wrapped loosely and a little dry or wet without great loss provided they cannot shift. Expressmen are not always careful in handling such packages, and if there are intervening spaces between the plants they are sure to suffer in transit. The soil in which they are grown is heavy and when transported a great distance these air spaces are disposed of by the weight of the soil.

Should the package be turned over several times before reaching destination the contents will doubtless be in confusion, with the soil off the roots as well as many broken plants. When several varieties are put into one box they are usually separated by sheets of paper. When danger of frost is over the wrapped plants are set upright in shallow boxes, which are provided with a post in each corner, extending above the plants, to which cleats are nailed, to the two end posts. These cleats form a support for the cover which consists of thin slats that are nailed about an inch apart to admit air. This method of open packing is the most satisfactory when the weather will permit. It also allows the expressman to see the contents, and is thus not usually handled as roughly as when the closed system is employed. Do not use cut flower tags on a box of plants. The former are billed at merchandise rates and the latter is favored with 20 per cent discount.

ELMER D. SMITH.

Raising Chrysanthemums from Seed.

Chrysanthemum seeds germinate very readily. A temperature of about 50° in any glass structure will answer the purpose admirably, and if the boxes or pots in which the seed is sown can be placed where a little brisk bottom-heat can be obtained, the seed will germinate very rapidly and successfully, says Gardening Illustrated. We prefer to sow the seed in shallow pans or shallow boxes, crocking these carefully, and filling them with a mixture of light soil, loam, and leaf-mould in equal proportions. Add thereto a free sprinkling of coarse silver-sand, and mix the heap thoroughly. If the boxes and pans be filled with this compost, the seeds sown very thinly thereon, and subsequently just lightly covered with some of the finer particles of soil, and a sheet of glass placed over them, germination will quickly take place.

The soil should be thoroughly moistened at the time of sowing the seed. This is best done by holding the boxes or pans in a vessel of water, allowing this to percolate up through the holes in the bottom of the different receptacles until the soil is thoroughly saturated. If this be done in the first instance, it is possible no more water will be required until the seedlings are well developed. In the course of a month or so, the seedlings may be pricked out into other shallow boxes. They should be dibbled out in rows about two inches apart, and a similar distance observed between each seedling in the rows. If the soil be pressed firmly about the roots, growth of a sturdy character will subsequently develop, and to keep young seedlings sturdy the boxes or pans should be stood on shelves near to the glass. As soon as the severe weather is past stand these receptacles in a cold frame where the seedlings could be gradually hardened off, and ultimately the lights should be entirely removed, preparatory to planting them outdoors in well-prepared soil

in early May. Those who have time and opportunity, rather than wait until May to plant out these young plants, would possibly prefer to prick the seedlings off again into larger boxes, or into any rough cold-frame outdoors.

When planting the seedlings outdoors in early May, observe a distance between each plant of about two feet, and about two and one-half feet between the rows, taking care always to plant firmly, in order to keep the plants stocky. A stake must be inserted as soon as the plants begin to make progress, and should any of them show a disposition not to branch out into lateral growths, the tops of the shoots should be pinched out, as this will make the plant bushy and branching.

Outdoor Chrysanthemums.

ED. AMERICAN FLORIST:—

What are the best chrysanthemums for growing outdoors for early flowering in British Columbia? Is the new Golden Glow suitable and, if so, what treatment should it receive? E. R.

Success in growing chrysanthemums outdoors largely depends on climatic conditions and for this reason it is difficult to give advice. In southern Michigan there are very few of the early pompons such as Mlle. Elise Dordan or Tono, which are in flower early in September. It is possible that other varieties would flower earlier in British Columbia than they do here, in fact, we think it quite probable. Many varieties which flower in England during August and September are six weeks later with us and the climate of western British Columbia ought to be similar to that of England.

Golden Glow was planted outdoors last season for the first time, but it did not make flowers as early as those planted inside. It was a very dry season and this may in part account for this difference. If we had to select varieties for this purpose we would use Polly Rose, Glory of Pacific, Midge, Golden Glow, Carrie, Opah and Comoleta, for these are the earliest of the Japanese section. There is no special treatment required for Golden Glow. Rich soil, liberal cultivation, ample moisture, restricting the plants to four or five branches and disbudding them is all that would be necessary. This should give good bloom, provided they will set bud early enough to develop flowers before frost.

ELMER D. SMITH.

A Census of Floriculture.

Every member of the trade is, or should be, interested in obtaining a correct census of floriculture, and the following schedule has been sent us by the chief statistician of the bureau of the census, Washington, D. C., owing to the good offices of the Society of American Florists. This schedule should be taken as suggestive and it has been issued with a view of eliciting criticisms and other suggestions by the trade. The preparation and collection of this class of data is very troublesome work and it behooves everyone to assist as far as he possibly can. The information given is used for census purposes only, and has nothing to do with taxation or any other matter. All are invited to offer suggestions as to how these questions can be improved and should address L. G. Powers, chief statistician of the Bureau of the Census, Washington, D. C. Their suggestions will be looked forward to as an aid to the bureau in its work and will be given every consideration.

FLORIST'S ESTABLISHMENT.

1. Name of person, firm, or corporation conducting this establishment .....
2. Location of greenhouses: street and number.....
city or town ..... county ..... state .....

Note.—Inquiry 2 calls for the location of the greenhouses, while a corresponding inquiry on the first page refers to the business office. When the office is at the greenhouses the answers should be identical; otherwise, different.

3. Is this establishment owned or rented by person, firm, or corporation conducting same? .....
4. In renting, what is the amount of annual rental paid? $.....
5. Value of establishment: *a.* Land covered by greenhouses and by residence of operator (provided the latter is a part of this establishment) $..... *b.* Greenhouses and fixtures $..... *c.* Residence of operator (if a part of this establishment $.....; *d.* Equipment $.....; *e.* Live stock $.....
6. Total ground area in the establishment, including land covered by greenhouses, residence, etc. (square feet) .....
7. Total square feet of ground covered by greenhouses in the establishment .....
8. Total square feet covered by sash for hotbeds and by frames .....
9. Average number of persons employed in the establishment in 1909 .....
10. Total amount paid for labor in 1909 ..... $.....
11. Total amount paid for advertising, catalogues, and postage in 1909 $.....
12. Total amount paid for soil, stable manures, chemical fertilizers, and tobacco and other insecticides in 1909 ..... $.....
13. Total value of fuel consumed in greenhouses and office $.....
14. The number and value of field grown and pot grown plants and the amount received from the sales of those plants, and flowers cut therefrom, in the year 1909.

Note.—After this inquiry report only those plants which are grown by yourself; omit any bought for immediate sale. Do not make any entry in the spaces marked X.

Name of plant.	Number of plants grown and sold.	Amount received from sales of plants grown and sold.	Amount received from sales of cut flowers.
a. Roses		$.....	$.....
b. Carnations		$.....	$.....
c. Violets		$.....	$.....
d. Chrysanthemums		$.....	$.....

THE VIOLET.

Commercial Varieties.

Respecting the comparative merits of the double and single varieties, in a few of the larger cities the doubles are more popular with the dealers; this is entirely a local condition, due to the facts that in those localities the doubles are exceptionally well grown and the singles are not. When we reflect that in but a few restricted areas of this great country, it is possible to produce, at a profit, really fine double violets, while the single varieties seem to do well almost everywhere, the comparative value of singles and doubles to the trade is very apparent. It also seems to be evident that on those markets where both are shown in equally good form the singles have the preference and soon dominate the trade. For long distance shipping, however, the doubles will always lead, for although they lose the greatest charm of the flower—fragrance—they do keep their shape.

Of doubles we really have but two distinct varieties: Marie Louise and its various sports—all very similar in appearance and culture to the parent—and Lady Hume Campbell. The profitable culture of the former type is, I think, restricted almost entirely to the Hudson river section and some parts of the Pacific coast, while Campbell does nicely in many places. Most of the varieties of doubles brought out recently by European growers (and they are few in number) seem to be of the Marie Louise type and of little value in this country

The real beginning of the single violet industry in this country dates from the introduction, by a California grower, of a French variety, re-named by the introducer, California. This was the first winter blooming single violet of a respectable size of flower, and its introduction created quite a sensation. It was a

ESTABLISHMENT OF F. R. GILLMANN, RHINEBECK, N. Y.

big advance and is still largely grown in some sections. This introduction must have been about 18 years ago. Some five years later the list was enriched by the addition of two grand varieties from the same source (southern France) Princess of Wales and La France. The latter variety proved fine for early and late bloom, but inclined to be sleepy in midwinter. Princess, however, quickly took its position as the best single violet in cultivation, which place it has maintained to date. It is too well known to require description or criticism here.

During the past 10 years a number of American varieties have been partially introduced to the trade. Most of these originated from a single flowering deciduous type, quite common in the upper south. They were almost odorless, of comparatively small size, and of little value commercially. The only exception was the variety Boston, put out in 1908. This is a supposed sport of Princess of Wales, varying a little in color, but with quite distinct foliage. Reports of its behaviour vary greatly with different growers. It is only fair to the variety to withhold judgment until it has had a more thorough test in different sections and under varying conditions of culture.

During the same period the growers of France, Italy and Germany have introduced a number of varieties, most of which the writer has had under test. A majority of these kinds it is not necessary to mention by name as they proved of no value under our system of cultivation. In this list I would place Italia, Mlle. Pages, Perle Rose, Souvenir de Jules Josse and many others.

The two that stand out pre-eminent in the whole list, and that have proved of value commercially, are Kaiser Wilhelm and Baronne Rothschild. The Kaiser is of the Princess of Wales type, with flowers of better substance, long, stout stem, and with vitality equalling Princess when first introduced; fragrance not pronounced. Flowers as freely as the old favorite. Briefly described it is an improved Princess of Wales.

Baronne Rothschild with us has proved the best single violet ever tested, flowers of improved California type, larger, and with broader petals; keeping qualities of the best. It is the most fragrant variety—single or double—we ever handled, and retains its fragrance for a number of days. Color darker than Princess, stem long and strong. But it is in its free blooming qualities that it leads the whole procession. The foliage is small for a single and the whole vigor of the plant goes to the production of flowers. Coming into flower September 1, it keeps up the good work continuously until May 1—a month earlier and a month later than Princess. The originators claim that it will give two flowers to one of Princess. This seems a fair claim as with us it has done even better. Perhaps, like other of our emigrants, it does better in America than at home.

VIOLA.

Ornamental Bedding.

ED. AMERICAN FLORIST:—

Please tell me how I can cut out the correct form for a shield about 20 feet long on a lawn. Also how to make a crescent.

S.

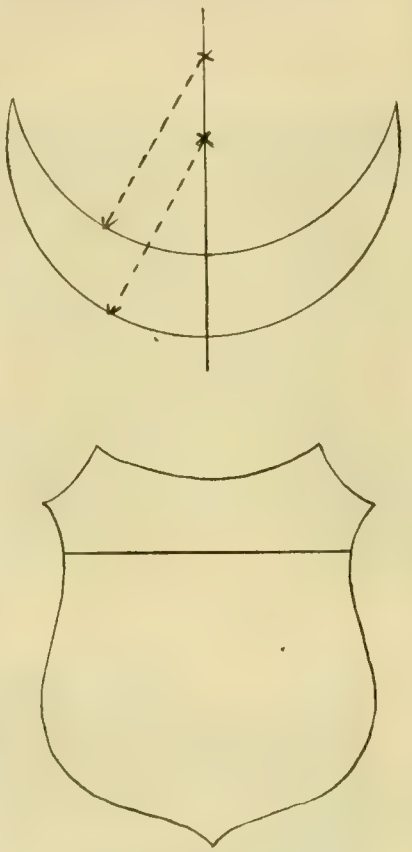
Enclosed designs will give "S." an idea how to make a shield and a crescent. The shield is drawn to scale one inch =10 feet. To make a crescent use the same radius for both lines, but from different points, which are both at right angles with the crescent and are governed by the width of the bed desired.

ALOIS FREY.

Lincoln Park, Chicago.

Clerodendrons.

There are very few greenhouse shrubs or hard wooded plants so easily cultivated as the clerodendron and when well grown there are not many that will so fully repay the attention given to them. Years ago clerodendrons (especially specimen plants of C. Balfouri) were frequently seen at exhibitions in the classes calling for stove or greenhouse plants in bloom, but of late years the growing of them, even for this purpose, seems to have fallen off. Their merits as bright, useful flowering plants are such, however, that there is no doubt but they will again be grown extensively. C. Balfouri, the variety mostly grown, is of a climbing habit producing its flowers on laterals put forth from the buds of the previous year's growth, and, in order to be sure of having the plants in condition to flower, it is necessary to ripen the young wood.



Designs for Crescent and Shield.

Dotted Lines Are Radii for Describing Crescent.

Clerodendrons may be grown from cuttings or seed, but the best results are usually obtained by putting in cuttings any time in the spring when they will root readily either in sand or sand and leaf mould. If each cutting is given a small pot to itself then plunged in a gentle bottom heat there will be but few failures in rooting and less liability of losing any in repotting. When the cutting pots are partially filled with roots the plants should be shifted to a larger size and their after success largely depends on the soil used in potting them. This should consist of two parts fibrous loam, the remaining third charcoal, and ½-inch bones in about equal proportion; the loam should be used in a lumpy state without the vicious process of screening. The potting compost should always be dry, that is, properly dry for potting. Clerodendrons in their growing season require a great deal of water and in order that they may get plenty of it and still have the soil in the pots sweet, careful attention should be given drainage; this applies to all hard wooded plants as well as to clerodendrons. If the young plants are kept growing vigorously throughout the season, repotting them whenever needed, the second season they should flower profusely.

It is absolutely necessary in order to have an abundance of flowers, to ripen the wood of the current year, and to do this, water should be given the plants sparingly in the winter months and the temperature of the house wherein they are kept not much over 50°. In the spring the plants may be started into growth the time to be regulated according to the time when they are wanted to be in full bloom; thus, if wanted in May and June they ought to be started early in February in a temperature of 65° to 80°; again, if wanted to be at their best in July, March will be time enough to start them by an increased temperature. In the spring C. Balfouri should be shortened not pruned in the way necessary for C. fallax and C. paniculatum; these flower better if they are cut back to within a short distance of the old wood. Repot the plants when they have started in growth.

D. M.

Civil Service Examinations.

ASSISTANT CURATOR WANTED.

The United States civil service commission announces an examination on March 30 to secure eligibles from which to make certification to fill a vacancy in the position of assistant curator (male), Division of Plants, National Museum, at $1,200 per annum, and vacancies requiring similar qualifications as they may occur. Applicants for this examination should have a general knowledge of systematic botany, Latin, and preferably also of French or German; general clerical ability, neatness, and accuracy; and experience in collecting, preserving, identifying, classifying, cataloguing, mounting, and labeling plants. College graduates are preferred. Age limit, 20 years or over on the date of the examination.

LABORATORY AID (MALE).

The commission also announces an examination at the same time to secure eligibles from which to make certification to fill a vacancy in the position of laboratory aid in agricultural technology (male), at $50 a month, in the Bureau of Plant Industry, Department of Agriculture, and vacancies requiring similar qualifications as they may occur in that department. Men only will be admitted to this examination. The duties of the appointee to this position will include aiding to secure and report scientific data in connection with various projects, such as cotton standardization, fiber investigations, examination of paper and pulp, the technology of wheat and other grains, and also general laboratory work. The questions in physics will be such as a person who has had a high school education may be able to answer. Age limit, 17 to 25 years on the date of the examination.

Applicants for either position should at once apply either to the United

States Civil Service Commission, Washington, D. C., or to the secretary of the board of examiners at any place mentioned in the list printed thereon, for application form 304. No application will be accepted unless properly executed and filed with the commission at Washington. As examination papers are shipped direct from the commission to the places of examination, it is necessary that applications be received in ample time to arrange for the examination desired at the place indicated by the applicant. The commission will therefore arrange to examine any applicant whose application is received in time to permit the shipment of the necessary papers.

To Be Done Now.

Cannas which are still dormant should be kept a little on the moist side, to sprout slightly; they resent the dry side and should never be sold as dry roots in shops, but if offered for sale should be in flats sprouting in a mixture of light soil with leaf mould or moss.

Gladiolus keep best tied in paper bags of 100 or less, or if on shelves or crates it is well to put newspapers under as well as over them.

Watch for decay in centers or under surface skin of tuberose bulbs; store in a temperature above 55°.

The Late E. V. Hallock.

The following resolutions on the death of President Edward V. Hallock were adopted by the New York Florists' Club at the meeting on March 8, 1909.

Whereas: We, the members of the New York Florists' Club, are overwhelmed with grief at the sudden demise of our friend and president, Edward V. Hallock, who was stricken down on the night of March 2, while apparently in the full possession of his health and faculties and

Whereas: This club has sustained a great loss in the death of its president at the beginning of his term of office when the prospects of a brilliant year seemed most promising. He was an able executive and earnest worker in the club's behalf and exerted his best energies for its upbuilding. Mr. Hallock stood for all that was elevating in horticulture, lending his speech and pen for its advancement. Not the least of his efforts were directed to the introduction of a course of practical horticulture in our public schools. He was a man whose attractive personality appealed to all. Generous, sympathetic, of fine impulses, kind and considerate of the feelings of others, he leaves many friends to mourn him. Therefore be it

Resolved: That these minutes be spread upon the record of the club and a copy be forwarded to his bereaved family, to whom we tender our deepest sympathy.

Signed:

WALTER F. SHERIDAN,
FRANK H. TRAENDLY,
Committee.

Scott Memorial Fund.

At the Niagara Falls convention the undersigned were appointed a committee to receive subscriptions for a memorial to the late William Scott. At that time the committee received a large number of subscriptions and many individuals, florists' clubs, business houses and the trade press interested themselves in the movement, turning over to the committee the sums raised by them, together with the names of the contributors. Consultation with the family of the late Mr. Scott, and with others interested, indicated that possibly the best form that the memorial could take would be a monument to mark the grave in Forest Lawn cemetery, Buffalo, N. Y. It seemed desirable to complete the matter with as little delay as possible, but considerable time was consumed in that the block of granite must needs be quarried specially in Vermont, for the stone selected. The memorial is now in place, however, and the unexpended balance of the fund has been turned over to Mrs. Scott for the maintenance of the plot.

OBITUARY.

J. B. O'Neil.

J. B. O'Neil, of Elgin, Ill., son of B. O'Neil of the same place, died at his home on Saturday, March 6. He was

The Late J. B. O'Neil.

only 28 years of age, but in spite of his brief career could number a very large circle of friends in the trade. His first experience was gained working with his father in store and greenhouse, and when only 10 or 12 years old was sent to Chicago to buy stock for his father's place. With the exception of a brief period in 1903 or 1904, which he spent in Des Moines, Ia., he has been employed for the past 10 years by Vaughan's Seed Store, Chicago, both in the store and on the road. A funeral service took place at the residence on Monday morning, at 9:30 o'clock and at the church at 10 o'clock, and was in charge of the Woodmen. Elaborate floral designs were sent by friends both in and out of the trade. Geo. Asmus, J. B. Deamud, C. Cropp, A. Henderson and John Degnan represented the Chicago trade at the funeral.

J. J. Nussbaumer.

J. J. Nussbaumer of San Angelo, Tex., died at his residence on Koberlin street February 28. Mr. Nussbaumer was born in 1860. He moved to San Angelo from Okawville, Ill., in 1895 to regain his health. He was a druggist by trade, but after moving to San Angelo he decided that outdoor work was what he needed and started a greenhouse in East Angelo. The mother, Mrs. Annie M. Nussbaumer, the wife, Mrs. Ella N. Nussbaumer, and son, Morgan, survive. Mr. Nussbaumer had been identified with the growth of San Angelo for 13 years, and he was one of its most highly esteemed citizens.

Joseph Metz.

Joseph Metz, one of the oldest florists of Harlem, died at his home, at 316 East One Hundred and Sixteenth street, February 27, of pneumonia, aged 81 years. He was born in Germany and came to New York 50 years ago, opening a store at One Hundred and Sixteenth street and Third avenue in 1886. He retired a short time ago. A widow and five children survive him.

Meetings Next Week.

Boston, Mass., March 16.—Gardeners' and Florists' Club of Boston, Horticultural Hall.

Boston, Mass., March 20.—Boston Co-operative Flower Market, Music Hall place, spring flower show.

Buffalo, N. Y., March 17-19.—American Rose Society, annual meeting and exhibition.

Detroit, Mich., March 15, 8 p. m.—Detroit Florists' Club, Cowie building. Paper on "Bulb Forcing," by Chas. H. Plum.

Grand Rapids, Mich., March 15.—Grand Rapids Florists' and Gardeners' Club, Board of Trade rooms, Pearl street.

Lake Geneva, Wis., March 20, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

Montreal, Que., March 15.—Montreal Gardeners' and Florists' Club, Royal Guardians building, 211 Sherbrooke street.

New Orleans, La., March 18, 8 p. m.—New Orleans Horticultural Society, Kolbs hall, 127 St. Charles avenue.

New Orleans, La., March 14, 2 p. m.—Gardeners' Mutual Protective Association, 118 Exchange alley.

Newport, R. I., March 17.—Newport Horticultural Society.

Pasadena, Calif., March 19, 8 p. m.—Pasadena Gardeners' Association, G. A. R. hall, East Colorado street.

Philadelphia, Pa., March 16, 8 p. m.—Florists' Club of Philadelphia, Horticultural Hall, Broad street, below Locust.

Providence, R. I., March 15, 8 p. m.—Florists' and Gardeners' Club of Rhode Island, 96 Westminster street.

Salt Lake City, Utah, March 16.—Salt Lake Florists' Club, Huddart Floral Co., 114 East Second South street.

San Francisco, Calif., March 20.—Pacific Coast Horticultural Society.

Scranton, Pa., March 19, 7:30 p. m.—Scranton Florists' Club, Guernsey building.

Seattle, Wash., March 16.—Seattle Florists' Association, Chamber of Commerce, Second avenue and Columbia street.

St. Paul, Minn., March 16, 8 p. m.—Minnesota State Florists' Association, 510 Snelling avenue, North.

Toronto, Ont., Can., March 16, 8 p. m.—Toronto Gardeners' and Florists' Association, St. George's hall, Elm street.

Important Foreign Exhibitions.

May 19-21.—National Horticultural Society of France, annual exhibition, le Jardin des Tuileries, Paris, France. Abel Chatenay, secretary, 1 Rue St. Aubin, Vitry-sur-Seine, France.

May 25-27.—Temple show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. E. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

SECRETARY HAMMOND, of the American Rose Society, writes: "The Buffalo people send their best wishes. Tell Chicago and all the other folk to come to the rose exhibition and bring their best."

A JOINT meeting of the tariff committee of the Society of American Florists, American Seed Trade Association and the Nurserymen's Association has been called for March 18, at noon, at the Iroquois hotel, Buffalo, N. Y., in order, if possible, to harmonize the new tariff schedules which are being proposed that these three national associations in horticulture may unite in recommending a uniform schedule to congress.

ROSE SHOW next week.

LESS than a month to Easter—be ready.

TRADE offers, printed on postals, form a very objectionable method of advertising for obvious reasons.

FREIGHT shipments of dormant trees and bulbs without use of refrigerator cars may generally begin with safety after March 15.

A STORM of remarkable severity for the season covered most states east of the Ohio March 4, leaving snow and ice, the effects of which will remain some time.

THE increasing importance of the gardenia, rivaling the orchid and cutting deeply into violet sales, renders the paper on its culture by Wm. Kleinheinz, elsewhere in this issue, of especial interest to cut flower growers.

THE premium list of the third spring flower show of the St. Louis Horticultural Society to be held in the Grand Avenue Masonic temple, St. Louis, Mo., March 24-26 contains a number of good cash prizes, especially for shrubs, table decorations and bulb stock. Otto G. Koenig, 6473 Florissant avenue, St. Louis, is secretary.

American Carnation Society.

CARNATION REGISTERED.

By The Chicago Carnation Co., Joliet, Ill. Conquest—Parentage, Daybreak, Lawson and unknown seedling; color, light pink overlaid with deep rose pink; size of flower, 3 to 3½ inches; habit, like Lawson with a stem as long as Enchantress and very stiff.

ALBERT M. HERR, Sec'y.

Society of American Florists.

MEETING OF THE EXECUTIVE BOARD.

The regular mid-Lent meeting of the executive board is called for Saturday, 8 p. m., March 13, at the Sinton hotel, Cincinnati, O., by order of President Valentine.

WITHDRAWAL OF REGISTRY APPLICATION.

Under date of March 1, 1909, C. G. Roebling, by James Goodier, gardener, withdraws his application of February 5, 1909, for the registration of Cattleya Eureka, stating that he has been informed by Mr. Orpet, of South Lancaster, Mass., that the same hybrid was exhibited by him under the name of Lælio-Cattleya Johannson.

W. N. RUDD, Sec'y.

[The apparent disparity in the name is, of course, accounted for by the fact that the plant frequently known and listed as Cattleya crispa is, correctly, Lælia crispa.—ED.]

MEETING OF TARIFF COMMITTEE.

The legislative and tariff committee of the Society of American Florists met February 24, at 35 Cortlandt street, New York. Benjamin Hammond, Frank R. Pierson, Patrick O'Mara, J. D. Eisele and Patrick Welch were present. E. A. Mosely reported inability to be present on this date. There was a mass of correspondence and Mr. Hammond suggested that F. R. Pierson act as chairman and he would act as secretary. The entire committee settled down to business. The following motion was moved and seconded:

Resolved: That it is the sense of this committee that the Society of American Florists recommend wherever possible that a specific duty upon bulbs and plants be imposed. Carried.

Resolved: That the schedule be by count and not by measure. Carried.

Resolved: That this committee do recommend that the following specific duty be levied on a ratio per 1,000, namely:

Hyacinths	$ 4.00
Tulips	1.50
Narcissi	1.50
Liliums, all kinds	7.50
Lily of the valley, pips	1.50
Lily of the valley, clumps	10.00
Iris, Spanish and English varieties	.60
Iris, all other varieties	10.00
Oxalis	.25
Crocus	.25
Jonquils (Narcissus Jonquilla)	.50
Ixia	.50
Montbretia	.50
Galanthus (snowdrop)	.50
Ranunculus	.50
Chionodoxa	.50
Freesia	.50
Gladioli	1.00
Scillas	.50
Anemones, bulbous sorts	1.00
Begonias	2.00
Gloxinias	2.00
Colchicum	1.50
Astilbe	3.00
Callas	10.00
Dahlias	15.00
Peonies	15.00
Amaryllis	15.00
Arums	5.00
Richardia	5.00
Zephyranthes	.50
Crown Imperials	5.00
Cyclamens	5.00
Muscaria	.50

All bulbs, bulbous roots or corms which are cultivated for flowers or foliage not specially provided for in this act, 50 cents per 1,000. Plants to be taken up at next meeting.

Resolved: That collected orchids be placed on the free list but that orchids established be subject to a duty of 25 per cent ad valorem. The committee proposes to seek a conference with the seedsmen and nurserymen upon all points of mutual interest so as to present the case before the ways and means committee with suitable unity.

BENJAMIN HAMMOND, Sec'y.

Tributes to the Late E. V. Hallock.

W. Atlee Burpee writes: "E. V. Hallock was one of nature's noblemen and loved by all who knew him. Our friendship has been of 30 years' standing and only last November we both remarked that we had not seen enough of each other of late years and must 'get together' at each other's country homes the coming summer. How little did I think then that never again should I see him living, never again enjoy his genial smile nor feel his warm hand clasp. His close friend, J. C. Vaughan, wrote last week as he was coming from Chicago to his funeral and said of his death: 'It leaves a great vacant space around New York for me' and this vacancy will be deeply felt by many other friends who, while not seeing him so frequently, felt always that in E. V. Hallock they had a friend true as steel,—one entirely free from self-seeking and whose very presence was uplifting. As a young man I well remember how free and open he was in giving of his knowledge and how deeply I regretted his selling out his bulb business as there are few men I have ever known with whom it was such a uniform pleasure to have business dealings. His host of friends will miss him keenly, but how terrible is the sorrow that so suddenly darkens the lives of his two daughters."

E. G. Hill, Richmond, Ind., writes: "It was with very deep regret that we heard of the death of our friend, E. V.

Hallock, of Floral Park, N. Y. For fully 30 years we have enjoyed his acquaintance in the trade and have only the very kindest memories of our relations with him. His letters, throughout all these years, have been an inspiration when they came to hand, for he was always in a cheerful frame of mind and fully assured that no matter how dull prospects might be at the moment they would very soon be very much brighter. His many friends will miss his cheery, kindly greetings."

H. G. Berning writes: "Though my acquaintance with Mr. Hallock was not an intimate one, I sincerely regret his untimely death. Our society and horticulture generally has sustained a great loss, and he will be sadly missed in our gatherings."

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—As salesman, designer and decorator; salary considered if position good. Address J. S., care American Florist, 1133 Broadway, New York.

Situation Wanted—In up-to-date flower store, by an experienced man; can furnish best of references. Key 810, care American Florist.

Situation Wanted—By a first-class designer and decorator; 18 years' experience; age 36; best reference given. Address Key 809, care American Florist.

Situation Wanted—By practical gardener and florist; private or commercial; life experience; good reference. Address J. HODGE, 210 N. Tod Ave., Warren, O.

Situation Wanted—In a greenhouse where I can learn the florist trade; young man, 19; Iowa or Illinois preferred. Address Key 792, care American Florist.

Situation Wanted—A young general all-'round greenhouse man wishes position near Chicago; eight years' experience; state wages in first letter. J. HANLON, No. 2056 Gratiot Ave., Detroit, Mich.

Situation Wanted—By all-'round florist and practical landscape gardener; twelve years' experience three years in Europe and nine years in the United States. Address Key 813, care American Florist.

Situation Wanted—As assistant on first-class commercial or private place; single, aged 23; eight years' experience; best of references; near Chicago preferred. Address Key 791, care American Florist.

Situation Wanted—By an all around general greenhouse man as assistant gardener; six years' experience; eastern states or New York preferred; state wages in first letter. RICHARD KRAUS, 15 Allen St., No. Cambridge, Mass.

Situation Wanted—By a young man, 23 years of age; speaks three different languages; 10 years' experience; able to take charge of a small or private place; south or western states preferred; first-class references. Address Key 818, care American Florist.

Situation Wanted—By an intelligent, industrious young married man, aged 28 Hebrew; considerable experience in general greenhouse work; capable of taking care of ten or twelve thousand feet of glass. Please give particulars and wages. Key 819, care American Florist.

Situation Wanted—Head gardener or superintendent for country estate; understands everything connected with such a position greenhouses, lawns, vegetable garden, etc.; salary $1,200 a year and cottage and fuel; married; best references. Key 816, care American Florist.

Situation Wanted—By a young man of good character; wants position as traveling salesman for florists' supply house or bulb house; with some experience; florist by trade; can furnish A1 references; N. Y. or Pa. preferred; ready any time. E. M. DUSINBERRE, Corning, N. Y.

Toronto.

TRADE INCREASING.

Increasing activity in all branches of the business is the decided opinion of the trade generally. Inclement weather was responsible for the growers' small output, but now that we are favored with brighter weather, there are better prospects, especially for roses. Bridesmaid and Bride have responded to the calls of sunshine quicker than the other varieties, though Killarney and Richmond are fast coming in. American Beauty is still scarce, but the growth of the plants promise a good cut soon. Carnations were never better and good blooms are in evidence, the fancies being shown in most stores, though it is very noticeable that Rose Pink Enchantress is going back and less space will be given this variety. Violets which have been off crop most of the season are now in their glory and the single Princess of Wales, for which this section is noted, is in very fine shape. Lilies are plentiful; asparagus is scarce.

THE RETAILERS.

The windows of the different establishments about the city show more than the ordinary display of flowers. Simmons has begun to specialize, and the last few days has shown the table decorations in orchids. Chas. Tidy always shows the very best of stock, and his sweet peas and lily of the valley in hamper arrangements are fine. J. H. Dunlop has an elegant display of flowering plants. His lilacs are about the only ones grown in this vicinity.

A meeting of the agricultural committee of the floral section for the National Exhibition was held the other day for the reconstruction of the prize list. A number of changes, mostly of a technical character, are noticed, the particular aim being to bring in more uniform exhibits and which also include the amateur as well as the professional. A resolution was carried that the different parks and private growers be allowed to compete.

CARNATION EXHIBITION.

The annual carnation exhibition of the Toronto Agricultural Society and Gardeners' and Florists' Association at St. George's hall was probably the most successful among the 13 similar events of the past.

As one entered the hall his gaze was at once arrested by a most lavish and beautiful display of roses, carnations, lily of the valley and violets. On three sides of the room were ranged the flowers, with a fine group of pot plants interspersed. One of the special features of the exhibition was the fine collection of carnations which have never been seen in Canada before, sent by American firms. The gold medal awarded by the Toronto Horticultural Society for the vase of best carnations was won by H. Weber & Sons Co., of Oakland, Md., with Toreador. It is pink with a white stripe, and is particularly large and vigorous. Baur & Smith, of Indianapolis, Ind., sent their new Shasta. It is pure white, and is strongly perfumed. J. D. Cockcroft, of Northport, L. I., sent his Georgia, which is white and very pretty. The Chas. Knopf Floral Co., of Richmond, Ind., was represented by a new light pink variety called Mrs. Charles Knopf. Another specimen of their culture is ruby-colored flower, with rich odor, resembling to some extent the old garden carnation.

The Dale Estate, Brampton, had upon exhibition two immense bunches of roses, which the officers of the society claim have never been surpassed in this city for beauty and excellence. On one hand was seen a brilliant display of Bridesmaid and Bride. This company also sent a grand vase of the new pink carnation, Winsor; one of Enchantress of a light pink color; one of Beacon, a light red; also Princess violets as large as pansies, and lily of the valley. Wm. Lawrence, of Eglington, had a fine assortment of carnations on exhibition, including four well-known varieties. A vase of New York Express mignonette attracted much attention, for each spike of this fragrant flower was upwards of a foot long, and seemed to have reached the limit for size. A. E. Crowhurst, of Mimico, had four vases of carnations. Harlowarden was of exceptional quality. James Morgan, of Hamilton, had a vase of Princess violets, which were particularly fine.

A collection of orchids from T. Manton, of Eglington, commanded attention. It contained a pure white cattleya. Dendrobium Wardianum lent an interest to the group. The Steele-Briggs Seed Co. had a fine display of primulas from its own seed. Wm. Jay & Son had a beautiful display of Boston and lace ferns, and J. H. Dunlop, the president, a collection of white lilacs in bloom, with azaleas and croton foliage, which were much admired. In the evening there was a very fair attendance. A good orchestra rendered popular airs.

H. G. D.

Montreal.

BUSINESS GOOD.

Business during Lent so far shows very little sign of a decrease; in fact, there is a noticeable increase in the sale of pot plants, especially bulbous stock. Good roses are plentiful now and find a ready sale. Carnations and violets more than fill the demand and are very good. Lily of the valley is well liked during March and orchids are handled by almost all the stores in the city. In pot plants besides bulbs, there are azaleas, cyclamens, primulas, rhododendrons, lilacs, and many others to be seen in very good shape. Two snowstorms following each other have delayed spring operations; it will take a long time to thaw the amount of snow and the crust of ice is of considerable thickness caused by the many rains last January. Trees and shrubs have suffered severely by ice forming on the branches and causing breakage to an alarming extent. There will be a lot of planting in trees and shrubs this spring; partly replacing broken ones and partly of planting new grounds as the building operations in the suburbs are very active.

The lecture by Dr. Snell, St. Anne de Bellevue, given before the Gardeners' and Florists' Club March 1, proved to be very instructive to every member present. The subject was "The Chemistry of the Garden." The lecturer dwelt at great length on the subject and thought that horticulture required intelligence of the highest order for the production of crops, for the protection and for the utilization of same. The advisability of holding a chrysanthemum show next fall was discussed but it was held over till next meeting; in the meantime, the growers are advised to prepare for same. A committee was appointed to interview the parks' committee of the city council and recommend that a larger amount be set aside for the keeping of the parks and squares, also to enforce the by-law to keep dogs on the line in the public parks.

LUCK.

CLEVELAND, O.—Lafayette A. Gates, 60, retired florist, died at the Grand hotel, Cincinnati, February 22, shortly after his arrival there. Gates had been suffering from Bright's disease. He was returning from Florida, whither he went a month ago in search of health. Mr. Gates is survived by a widow and one daughter, who live at 3521 Memphis avenue.

Greenhouses, NEW CASTLE, IND.

St. Louis.

PRICES LOW.

The second week of the Lenten season opened up with very little doing. There were quite a few flowers in the market and prices were forced down, especially on carnations. Roses as yet, have not been over plentiful and the prospects are they will not be until after Easter. Violets have become somewhat scarce and are now quoted at $3 per 1,000. Very few American Beauty roses are in and many of these are shapeless and bull headed. Sweet peas, when good, are easily disposed of, the only ones left over being very short stemmed. Ferns are somewhat scarce and are bringing $2 per 1,000. The plantsmen are all busy and getting ready for Easter. A goodly supply of bulbous stock is looked for, also all varieties of flowering plants.

NOTES.

A. F. Longren of Desplaines, Ill., was with us this week. He is very enthusiastic over the new carnation, Lucille. He disposed of quite a few cuttings while here.

Park Commissioner Scanlon has sent a protest against the Historical Society erecting a building within Forest park as against the ordinance.

Henry Ostertag has been nominated by the democrats for the house of delegates for the Twenty-eighth ward.

The meeting of the Florists' Club next Thursday will be a busy one; many important questions have to be answered.

Foster Floral Co. has discontinued the sale of fruit, and now confines itself only to the sale of flowers.

Will Osseck is still very lame and is not able to get down as early as he would wish.

Fred Alves, manager at Geo. Angermueller's, is expected to be married shortly.

Walter Retzer of the St. Louis Seed Co. will sever his connection with this firm.

ALBUQUERQUE, N. M.—John Woodward is making considerable additions to his greenhouse plant and is increasing his cultivated acreage from six to 14 acres.

SAN FRANCISCO, CALIF.—A well dressed young man tricked three retailers recently, and tried the same scheme at Wickstrom's Floral Depot, 804 Eddy street, where he was detained until the police arrived and placed him under arrest. He gave his name as Lewis Larsen, 20 years old. He called at the store of Podesta & Baldocchi, 1206 Sutter street, saying he wanted to buy $5 worth of flowers for his father's grave. He gave a check for $16.50 and got $11.50 change. The same trick was played on G. B. Antonini, 2001 Sutter street, and Pelicano, Rossi & Co., 1343 Sutter street. All the checks were worthless. The police say that altogether about 15 checks have been passed by Larsen.

A. L. RANDALL CO., 19-21 Randolph Street, Phone Central 1496. Private Exchange All Departments. **Chicago**

In saying our special **Killarneys** are the fanciest stock in the country, we are only voicing the opinions of the best flower buyers on the Chicago market and and Eastern growers who have seen them,

Our **White Lilac** in now of the larger variety—especially fancy stock and the crop is large enough to warrant the special low price we now offer it.
$1.00 per bunch.

Also large supply of all other Seasonable Cut Flowers. Headquarters for both Single and Double Violets.

Carnation Green Fluid Dye, For St. Patrick's Day, 50c per pint; 75c per quart; 10 quarts for $6.00.

Chicago.

MARKET CONTINUES VERY QUIET.

The market continues very quiet with little change from the conditions of a week ago. It is always a matter of remark that trade in the first week of Lent is a little duller than subsequently and so it has proved this year, though with the exception of a little spurt on Saturday and Monday the market has been practically featureless. The weather has been extremely freakish with sudden changes from spring conditions to those of winter and back again but has affected the production of stock little, if any, all growers' establishments rapidly coming into shape for a large Easter output. American Beauty roses continue practically off crop with little to be said for quality in the main. The miscellaneous roses are in large supply with excellent quality obtainable. Carnations are in very heavy supply and it takes considerable effort to move the stock to say nothing of cleaning up at night. The price of white carnations has advanced rather sharply owing to the demand for dyeing purposes for St. Patrick's day.

CHICAGO FLORISTS' CLUB.

A good attendance was out for the regular monthly meeting of the Florists' Club at the Union restaurant the evening of March 4, with President Geo. Asmus in the chair. Several important topics of interest came up for discussion including the matter of the next flower show. No action was taken in regard to this. The resignation of J. H. Pepper as recording secretary on account of intention of shortly removing from this city was presented and accepted. Louis Winterson was elected to fill the vacancy. Chas. E. Morton, of the Redondo Floral Co., Los Angeles, Calif., formerly of this city, was present and told of the organization of a florists' club in Los Angeles, and the interest that is being taken in it. The committee for the good of the club reported suggesting that a card party for a ladies' night be given by the club in the near future. The committee was authorized to forward these plans and to make the necessary arrangements. Allie Zech, who was elected a member at this meeting, was appointed by President Asmus to serve on the sports and pastimes committee.

It was decided that the club send a wreath to the funeral services of the late E. V. Hallock in New York, and a committee consisting of J. H. Pepper, J. C. Vaughan and F. F. Benthey was appointed to draft suitable memorial resolutions.

Ten names were proposed for membership, including G. H. Pieser, Jr., Michael Fink and Max Ringler, all of Kennicott Bros. Co.; Walter Adams, of Ernst Wienhoeber Floral Co.; W. S. Schofield, 184 North State street; Michael Matchen, 414 Summerdale avenue; R. E. Kurowski, of J. C. Moninger Co.; S. W. Baker, of La Grange; Peter Olsem, of Joliet, and John Pell, of Glencoe. Those elected to membership included: Allie Zech, 51 Wabash avenue; Geo. Ambrust, Oak Park; Chas. Zapfl, 753 Thorndale; R. F. Simons, 848 W. Harrison street; F. Merker, 1603 W. Twenty-second street; Chas. Bemish, 45 Wabash avenue; Chas. S. McCauley, Geneva; Emil Maerz, 242 N. Winchester; Paul Kubish, 45 Wabash avenue; F. Ayers, 396 Ontario street; F. Haage, 718 N. Leavitt street; F. Krause, 62 Racine avenue.

DEATH OF MRS. J. F. KIDWELL.

We regret to have to record the death of Ida M. Kidwell, wife of J. F. Kidwell, on March 9 at her home, 3804 Wentworth avenue. The funeral will take place from the residence Friday at 1 o'clock, interment at Mount Hope. Mr. Kidwell and family have the sincerest sympathy of a large circle of friends in the trade both in this city and in Washington, D. C., where he attained some little prominence as a grower before moving west.

NOTES.

Emil Buettner's Easter lilies are coming along finely and promise an excellent crop of exceptionally fine blooms for Easter. Practically the entire cut of Mr. Buettner's place goes to the A. L. Randall Co.

On Wednesday the condition of Earnest Oechslin was considered so favorable that it was expected that he could be taken from the hospital to his home by Saturday of this week.

The Fleischman Floral Co. is showing some magnificent rhododendrons in its window and a fine lot of bulbous stock. Lenten dullness is an unknown quantity here.

Peter Reinberg is showing a salmon pink seedling carnation of last season's origination. It is of a slightly deeper shade than Enchantress.

Geo. Reinberg is cutting quantities of cattleyas, principally C. Schroederi with some C. Trianæ, also Dendrobium Wardianum.

C. L. Washburn, of Bassett & Washburn, is at West Baden, Ind., recuperating from the effects of a very bad cold.

The bowlers are asked to meet at Bensinger's alleys, 118 Monroe street, Friday evening of next week.

The death of J. B. O'Niel at his home in Elgin on Saturday last, is noted elsewhere in this issue.

O. J. Friedman is to move from 1 Van Buren street to 185 Michigan avenue.

Frank Beu is showing some excellent wallflowers on the Flower Growers' Market.

Visitors: H. P. Scherer, Fort Wing, Ind.; Chas. Morton, Los Angeles, Calif., on his way east; J. W. Lawrence, Toronto, Ont.

TRADE QUIET.

The inclement weather that visited this city and vicinity March 4-5, cut down the rose supply to some extent. Good roses were scarce on March 6, but the demand not being heavy there was enough to go around. The week, as a whole, was a quiet one in the cut flower business, but considering the great exodus from the city to witness the inaugural and the very bad weather, there seems reason for thankfulness that business was no worse. Lilies, particularly callas, move slowly. The skirmish line of the southern narcissus is already in sight and doubtless in a week or 10 days the hosts will appear. Special American Beauty roses have brought 60 cents each, but there is no great demand for the short grades.

FLORISTS' CLUB MEETING.

The club met in the Grand Opera House building on the night of March 8. Vice President Turner called the meeting to order. Ex-president Weathered moved that regular business be suspended as a token of respect to our late beloved president, Edward V. Hallock. Seconded by Ex-President Traendly and adopted. Patrick O'Mara made a brief address. In an eloquent and sympathetic vein he extolled the high qualities of our late beloved president. He said he had no doubt that every member of the club felt that we have lost one of the best of men in the death of President E. V. Hallock, who had a smile and a kind word for every one. Benjamin Hammond followed, speaking along similar lines. He said President Hallock had been one of the most straightforward men in everything he did and was sincere in all his doings; he always seemed to be master of his business and was beloved by all with whom he had dealings. Wm. Hendrickson said that he owed much of his success to Mr. Hallock, as he was always kind and helpful and had an encouraging smile and word for all. Brief remarks were made by Ex-presidents Traendly and Totty. On motion of Patrick O'Mara, it was voted that all business be adjourned to the April meeting. It was a very sad and quiet night and every member seemed to realize the great loss the club has sustained. There was a fine exhibition of roses but the awarding of certificates was also postponed till the April meeting.

EXHIBITS OF ROSES.

Vase of White Killarney from Waban Rose Conservatories, Natick, Mass.

Vase of White Killarney from F. R. Pierson Co., Tarrytown.

Vase of My Maryland from A. N. Pierson, Inc., Cromwell, Conn.

Vase of My Maryland from Myers & Samtman, Chestnut Hill, Pa.

Vase of Richmond and one of Killarney from Adolph Farenwald, Hillside, Pa.

Vase of Bride and one of Bridesmaid from Henry Hentz, Jr., Madison, N. Y.

Rosa Sinica (Cherokee rose) and South Orange Beauty (Wichuraiana X American Beauty) from W. A. Manda, South Orange, N. J.

Vases of Bride, Bridesmaid and Killarney from W. G. Badgley, Chatham, N. J.

Vase of 25 Bridesmaid from Valentine Hamann, Summit, N. J.

Vase of Kate Moulton and one of Mrs. Jardine from Robt. Simpson, Clifton, N. J.

Vase of American Beauty from Henry Hentz, Jr., Madison, N. J.

Prominent visitors were: Harry A. Barnard, representing Hugh Low & Co., Royal Nurseries, Bush Hill Park, Middlesex, England; Michael Barker, editor AMERICAN FLORIST; Adolph Farenwald, and Wallace R. Pierson.

NOTES.

A large delegation from the Florists' Club attended the funeral of the late President Hallock, at Queens, L. I., March 6. Among those who attended were Ex-President Traendly of the S. A. F., Ex-President Weathered of the club, W. C. Rickards, John Scott, Marshall Duryea, Louis Schmutz, Sr., Henry Weston, Chas. Lenker, F. R. Pierson, Tarrytown, and Wm. J. Stewart, Boston. From Chicago were J. C. Vaughan and wife, Leonard Vaughan and M. Barker. Impressive services were held at the family home. Many fine floral tributes from the horticultural societies and individuals were laid on the last resting place of their departed friend.

Four ex-presidents of the New York Florists' Club attended the funeral of the late President Hallock. They were James Dean, Frank Traendly, John Scott and Chas. B. Weathered.

The second annual ball of the Greek-American Florists' Association was held at the Palm garden, Fifty-eighth street near Lexington avenue, on the night of March 2. The affair was a pronounced success and creditable to the Greek-American Association and the various committees in charge.

August Millang of Twenty-eighth street was married March 4 to Miss Emma Trojan of Elmhurst, L. I. The bride was bookkeeper for the firm of Millang Bros. during its existence and has for the past six years been a bookkeeper in the wholesale district.

Some changes have recently been made in the Growers Cut Flower Co.'s board of officers, whereby Jacob Hauck succeeds J. Vonder Linden as president and J. J. Brozat succeeds Aug. Kramer as treasurer.

Julius Roehrs, Sr., of Rutherford, N. J., has returned from his trip to Cuba and southern waters, much improved in health.

The many friends of Lyman B. Craw, of the Lord & Burnham Co., will regret to learn that he is seriously ill.

Visitors: H. N. Bruns, Ernst Wienhoeber and M. Barker, editor of the AMERICAN FLORIST, Chicago; T. D. Long and wife, Denver, Colo.; Benjamin Hammond, Fishkill-on-Hudson, N. Y.; E. A. Seidewitz, Baltimore, Md.; S. S. Skidelsky, Philadelphia, Pa.; J. D. Eisele, Riverton, N. J.; J. F. Bradshaw, Wallace, N. C.

Cincinnati.

BUSINESS GOOD.

We have had a week of good business. Plenty of work to sell the stock received, of which there was a good supply in practically all lines with the exception of American Beauty roses. Carnations, especially colored, were in over supply all week while there were not nearly enough white for orders. The best grades brought $3 per 100. At closing time each evening there always was a surplus of colored on hand, and these found an outlet the next day by the fakir route, and, of course, the grower will be a little ruffled when the returns are received. Bulbous stock was a glut all week, and it took some hustling to unload. Prices went glimmering. The one redeeming feature was the good call for lily of the valley, callas and Lilium Harrisii, these being sold out clean every day. This may be attributed to the immense amount of funeral work at the present writing. Violets, at the beginning of the week, were slow sellers, but as the week advanced there was a good call, especially for singles. There was an abundance of green goods of all kinds and a good call.

NOTES.

The next regular meeting of the Florists' Society will be held March 13 in the club rooms, Jabez Elliott Flower Market. At this meeting we expect to have President Valentine, Secretary Rudd and the balance of the executive committee of the S. A. F. with us. It is the desire of the officers to have all that possibly can attend this meeting. After the meeting there will be lunch, refreshments and cigars, with Charley Critchell and Billy Gardner doing the elegant. We might also add that the banquet to be tendered the aforesaid by our society will take place at the Sinton hotel on March 15 at 7:30 p. m. If you contemplate attending and have not notified the committee do so at once by sending your name to E. A. Forter, 232 West Fourth street, and he will make provisions for you.

The Blecher Floral Co., which succeeded W. K. Partridge at 148 East Fourth street, and began business in a very auspicious manner, has been forced to seek other quarters and has removed the stock and fixtures to 134 East Fourth street. Mr. Blecher was unwilling to part with the old store, but the landlord wanted to increase the rent, and Mr. Blecher did not feel inclined to work for the landlord, consequently the next best thing to do was to vacate. However, the company will do business wherever located, as Mr. Blecher is an artist and has a nice following of customers.

Ernst Wienhoeber and H. N. Bruns of Chicago were in the city a few hours the past week calling on the president of our society, J. A. Peterson. You can wager that the gentlemen saw a whole lot of our city in the few hours spent here, and undoubtedly left with a good impression of local hospitality.

Miss Adar Kresken, who, since her mother's death, has been down with nervous trouble, is able to sit up, and the doctors' reports are very encouraging, stating that within a week or 10 days the patient will be able to get to the store.

Nearly every retailer of prominence had something for the Alms & Doepke opening, this company having distributed its orders among 10 of the leaders. A very nice custom which is to be commended.

Coulthard & Pogue supplied the carnations for the spring opening of the Fair. Some 15,000 blooms were used.

Bob Ruttle, who has been down with the grip, we are glad to report, is convalescing. S.

Buffalo.

BUSINESS POOR.

March entered like a lamb, but soon changed, consequently we had snow, rain and cold which was not conducive to the sale of stock. Bulb stock is in profusion with a limited call only at reduced prices, while roses and violets are in no demand. The Lenten season has stopped all society functions, and even funeral work has been quiet. The automobile show last week and the sportsmen's show this week called for very pretty windows by the principal retailers.

The regular meeting of the Florists' Club was held on Tuesday evening, when Benjamin Hammond, secretary of the American Rose Society, addressed the club on what the Rose Society proposed to do. He and W. F. Kasting looked over the space at the Iroquois hotel which he thought was well adapted for the meeting, and in every way was pleased with what the committee was doing. After his remarks, the club got down to business of which the most important was the election of officers. It was the most spirited of any ever held by the club, and resulted in almost an entirely new board of officers. The selections were as follows:

Edward Slattery, president.
C. G. Guenther, vice president.
Wallace Eiss, treasurer (re-elected).
Wm. Legg, secretary.
D. B. Long, financial secretary.
Trustees: W. J. Palmer, Chas. Sandiford, L. H. Neubeck.

The newly elected officers are all good hard workers and it is safe to say that the club will have another year of prosperity. It is needless to say that Mr. Slattery will do all in his power to make the club a success, and will be ably assisted by his subordinate officers.

WEATHER HINDERS TRADE.

Business the past week was handicapped by the stormy weather; there was a fair amount doing, however, when the Lenten season is considered. Stock of all kinds is plentiful with the exception of American Beauty roses, which are still off crop. All good flowers of the special class appear to sell readily for 75 cents each and it has often taken the entire product of two or three commission houses to make up a dozen. The teas are becoming much more plentiful and prices have fallen 20 per cent from those of a week ago. Some excellent Bridesmaid has been offered recently, the strong bottom shoots developing into canes with enormous buds. Carnations are in good supply and sell readily at $3-$4 per 100. Sweet peas appear a bit off crop; growers say another week will bring in some new stock. Violets are a trifle overstocked; the quality of Princess is extra fine and prices rule low. Lily of the valley is in fair demand, the supply being light at present. Gardenias are more plentiful and cheaper. Orchids (cattleyas) are coming a little more freely but prices rule high. Daffodils and tulips are seen everywhere and are largely used for cheap boxes and by the curbstone merchants. Southern arbutus sells fairly well. Adiantum is always in demand and the old A. cuneatum is preferred by some to A. Croweanum. There never seems to be enough Asparagus plumosus. The local grown, together with the imported southern stock, all goes, and still the cry is for more. A. Sprengeri, when strictly fresh, is all right for decorations and made up work, but A. plumosus is the only kind asked for over the counter.

NOTES.

Robt. Craig reached home from his trip to the Isle of Pines last Wednesday. He reports, as did Mr. Westcott, that he had the time of his life. The tropical atmosphere and growth of the island was a revelation to them. In speaking of the well known palms and other familiar plants that are seen growing outside there with such luxuriance, Mr. Craig says they are not found outside of the lawns or points adjacent to dwellings where they were planted by the occupants. They appear, however, to like the climate and it would seem as if all plants of a similar nature would thrive here. The principal industry is the raising of grape fruits which are produced in quantity and possess a flavor that is said to be far superior to those grown in Florida. Mr. Craig purchased an estate of 170 acres and will plant a large acreage in grape fruit which will grow into profit in five years. Wm. P. Craig and John Groff, Mr. Craig's son-in-law, sail on Saturday to put the place in order for the first planting.

James J. Karins, the genial traveling salesman of the Henry A. Dreer Co., has just returned from a most successful trip to the Pacific coast. Two very fine Rhapis flabelliformis over nine feet in height and which when packed weighed 1,500 pounds each were a part of one of the orders which started on their journey to the far coast this week. Business at Riverton is most satisfactory. The sale of the new crested Nephrolepis Scottii is, Mr. Eisele says, proving a record breaker.

The Pennock window last week was a study in one color. The double cross of red immortelles of the Anti-Tuberculosis society was suspended in the center and flanked on either side with small flowered, dark red azaleas. These were arranged in a bamboo lattice frame work which filled up the entire background. Choice baskets of flowers were displayed on the bottom, the whole making a very beautiful decoration.

W. E. McKissick & Bros. are busy shipping special lots to out-of-town buyers for bargain sales. This is a practice grown up of late with the retailers in which certain lots of surplus stock are offered at a special price which, while low, still leaves them out with a fair profit and increases the use of flowers amongst those who are tempted to buy because of the low figures.

Fox, at the Sign of the Rose, features this week azaleas in one window and in the other Dutch hyacinths. Holland wooden clogs give a home touch to the bulbs which are planted in birch covered tubs with long handles. The azalea pots were all Vervæneana, nicely covered with pink tinted paper; both lots were priced, which is very important from a selling point.

Business in the commission houses is good for the season. The Leo Niessen Co. says it could do more but these people are so insatiable that the volume of trade, no matter how large, instead of satisfying only spurs them on. Extra Killarney and Richmond are the features this week and a special St. Patrick's day solution for carnations cheap enough for everybody.

Wm. K. Harris celebrated the seventy-first anniversary of his birthday, March 10, by an informal dinner at a well-known Broad street resort, the guests including John Westcott, John Burton, Edwin Lonsdale, George Anderson, Dennis Connor, Chas. H. Eimerman, U. G. Rowley and M. Barker.

The Century Flower Shop had as a special for last Saturday gardenias, offering them at 25 cents each. A large sale was the result.

K.

Boston.

STOCK OVER PLENTIFUL.

The effect of the Lenten season has to be endured. Engagements and weddings are rare occurrences this year, the few that have graced the calendar being carried out with unusual simplicity. Funeral work is at present the chief means of consumption and offers an outlet for but a small portion of the varied stock flooding the market. Notwithstanding the increase of all sorts of marketable stock prices have remained about the same; an occasional bargain is found, but the bulk of first class stock demands good figures. Bulb stock is shown no consideration and vast quantities are dumped out at first bids without hesitation. American Beauty roses are still at a premium and have been dropped from the list. Efforts have been made to realize from other markets but without success. Killarney is without a peer, and Richmond is also in good standing.

NOTES.

The details of planning the exhibition to be held at the Music Hall Market March 20, are rapidly being completed. The enthusiasm shown by all of the stockholders has greatly encouraged the members of the committee in charge, who are sparing no time or efforts to successfully stage the show. A full list of entries, wherein will be shown a complete collection of the products of commercial growers, insures deep interest and keen competition for the numerous prizes offered.

James F. Quinn of Brookline, during the past week, was nominated for the office of selectman. Mr. Quinn is among the best known men of this town and his popularity was well attested by the vote, he receiving more than any other candidate and is practically assured of election.

Visitors: Paul Berkowitz and A. Zeikman, Philadelphia, Pa.; Albert Pochelon and Walter G. Taepke, Detroit, Mich.

NO LENTEN QUIETNESS HERE.

The Lenten quiet has not been very noticeable, and will hardly be so until normal conditions return. The visitors as well as the new officials, are being given a round of entertainment, and hospitalities of one kind or other for which the winter season was not long enough are on the programme for the next two or three weeks, hence the retailers are all rushed and working early and late, to keep up with the various functions.

The regular monthly meeting of the Florists' Club took place at Eagles hall on the evening of March 2. The election of officers was the main business of the evening, and resulted as follows:

F. H. Kramer, president.
John Robertson, vice president.
Wm. Gude, treasurer.
O. A. C. Oehmeler, secretary.

Geo. H. Cooke and Theo. Diederich, directors for three years.

John Bollinger of Bethesda, Md., was admitted to membership of the club.

On the evening of March 3 it started to rain and blow, and by daylight of March 4 there were at least six inches of snow covering the ground, and a gale from the west that at times mounted to the velocity of 20 miles an hour. Readers will have noted by their local press the havoc wrought to telephone and telegraph wires and the gay decorations that lined Pennsylvania avenue on Tuesday night were soaked, beaten out by the wind and borne to the ground by the weight of the snow. On the whole, it began to look as if all the inaugural exercises would have to be postponed. However, while poles and decorations were falling down, the court of honor in front of the White House, where it had been planned to have President Taft review the parade, stood the terrific storm intact. As the day progressed the storm quieted down, the sun began to shine, and the national programme was carried out without further delay.

The sale of flowers for those who attended the inaugural ball was not as great as in former years, but business increased about 50 per cent and flowers which were not used were easily disposed of the following day. Everyone who saw the decorations at the inaugural ball room claimed them to be the most magnificent in the history of such affairs.

NOTES.

Geo. C. Shaffer showed a very appropriate and patriotic window setting for the inauguration. The feature of the window was a wax figure dressed to represent Columbia, an eagle carrying a sash, inscribed with the words E Pluribus Unum, and the picture of Taft on one side, and Sherman on the other. The pictures were placed in an oval shaped frame of leucothœ, Roman style.

Z. D. Blackistone showed an oil painting of the president and vice-president set in a bank of azaleas and maidenhair fern, with the national colors as a background.

Marche & Co. displayed silk banners artistically arranged, and vases of American Beauty roses and orchids.

The opening of the wholesale house makes it very convenient for local retailers to secure good stock. G. S.

The Seed Trade.

American Seed Trade Association.
Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

AUBURN, N. J.—William England's seedhouse was burned to the ground March 4.

THE Wyoming Seed Co. will erect a large warehouse and store near Cheyenne in the spring.

CHICAGO.—Wholesale onion set growers say their warehouses should be well emptied by the last of March.

VALENTINE BEANS and several other kinds are proving very scarce as the southern planting time arrives.

ROCKY FORD, COLO.—The Ebbert Seed Co. has been incorporated with capital stock $25,000. A. W. Cowager, H. Van Buskirk and R. S. Beall are the incorporators.

AMONG those who attended the funeral of the late E. V. Hallock, at Queens, N. Y., March 6, were W. Atlee Burpee, Philadelphia, Pa.; J. C. Vaughan and wife and Leonard H. Vaughan, Chicago; M. H. Duryea and W. C. Rickards, New York; and H. M. Wall, Brooklyn, N. Y.

GARDENA, CALIF.—John Bodger & Sons write: "Everything looks fairly promising to us, excepting in some places where the water laid a little long in the lowlands at the time of the heavy floods in January. We have been delayed quite a little in our planting and have had to replant in some places but, on the whole, the prospects are better than they were last season."

Jubilee Flower Show, Haarlem, 1910.

The complete schedule has now been published. It is a volume of 80 pages in the Dutch language, because the competition is only open to Dutch exhibitors. It is expected that many special prizes of honor will be given by patrons, societies, etc. The premiums offered in the schedule are 75 gold medals and about 2,500 other prizes. The judges will be chosen among the horticulturists of all nations. The permanent show in the open (from March 23 till May 16) according to the schedule, will consist of 200 classes for beds and groups of hyacinths, tulips, narcissi, crocuses and other bulbous plants; herbaceous perennials, rockeries, conifers, aucubas, azaleas and rhododendrons, buxus, ilex, prunus and other shrubs.

The first special show (March 23-31) contains 275 classes, principally for hyacinths, tulips, narcissi, crocuses, amaryllis and other bulbous plants in pots. A special feature will be the class for bulbs and plants, retarded in ice, and there are also very important classes for Azalea mollis and rhododendrons, roses, lilacs and other forced shrubs, stove and greenhouse plants and cut flowers.

The second special show (April 15-24) will have 300 classes of the same general character as those of the first show, but the third special show (May 4-12) will not afford an opportunity for showing hyacinths, but will probably have the character of a special show of orchids and decorative floral art. The regular meetings of the committee judging new bulbous plants will also be held in the show buildings every week.

The permanent exhibition in the open will doubtless be of the highest interest to foreign visitors and although the artistic and suitable arrangement of bulbous stock is a rather difficult task, there is every chance of obtaining good results, because already four local exhibitions of the same nature have been organized before in the bulb district. The Noorduijk section of the Bulb Growers' Society has done so twice already; the Sassenheim section quite recently, and the Hillegom section is this season preparing a local show, which may be considered as a valuable trial for the large jubilee show, to be held next year.

Damages for Untrue Seed.

A jury in Judge Brennan's court, Des Moines, Ia., awarded $471 damages against E. J. Hohberger February 25 because he sold Geo. T. Schlenker seed of yellow tomatoes when the latter ordered seed of Large Red. Schlenker sued for $1,700. He claimed he planted an 8-acre field of plants from seeds purchased from Hohberger, believing they were of the red variety. He did not discover the error, he said, until the plants grew and the yellow fruit made its appearance. He asserted there was no market for the yellow tomatoes and that he lost the profits from the 8-acre tract.

Pineapple Seed For Michigan.

The distribution of garden seeds by congressmen at government expense, is a custom that has outlived its usefulness, remarks the Manistique Pioneer-Tribune. The average householder has sufficient money to purchase his own vegetable seed, and he prefers to purchase them from a reputable seed firm rather than run the chances of losing a year's crop by experimenting with the ofttimes worthless seeds donated by the government. When a person in this latitude receives cantaloupe and pineapple seeds, he is doubly certain that the money is wasted.

They Make Good Soup.

It has remained for a "back-of-the-yards" constituent of Congressman James T. McDermott of the Fourth district, Chicago, to find the most original use for the seeds which congressmen distribute by the grace of the Department of Agriculture. The stock yards representative made up a list of all the voters in his district who have yards and lots large enough for home gardens and sent each a consignment of seeds for spring planting. Recently McDermott received a letter from one of the lucky ones containing thanks and the following request for more seeds: "Please send some more of them seeds. They make good soup."

Varieties of Cucumbers.

The beginner is sure to ask: What variety shall I plant? while the experienced man is sometimes led astray by glowing descriptions of new kinds to change his planting, or a great part of it. We have choice between three types, namely, the English, the American and their hybrids. The English type is a long cylindrical fruit, almost seedless, of fine quality, but unpopular in most American markets. It is too large a fruit and hence too expensive to meet the average wants. It is the great standby in Europe. Among its desirable features is an inclination to set fruit without pollination.

In the American type we have the White Spine as the best of its class. Most successful growers use this, and very many have a private selection of their own, which they guard jealously, so much so, that such seed is not in the market. They realize fully the advantage they have in a productive, uniform variety. The fact is that, under glass, one must make each and every foot of space produce the utmost, which is only possible by using perfected seed-stocks. Our markets demand a cucumber of medium length, good even color, and great uniformity. Every grower should endeavor to produce his own seed if he cannot buy satisfactorily.

In the hybrid class, Davis' Perfect is the best known today. It is a rank grower, longer than White Spine, but not as productive, nor as uniform, and probably slower to come into bearing. It is too long for some markets and, lacking uniformity, does not bring the highest returns. It may produce one of our best forcing strains by further selection. European growers prefer seed of several season's age, to fresh seed, of all cucumbers, claiming the old seed produces less vine and more fruit. Cucumber seeds are good for many years, hence one need run no risk whatever; he can try his stock one year and if good, plant heavily the next.

MARKETMAN.

Green Fly in Lettuce.

ED. AMERICAN FLORIST:—

Enclosed please find a leaf of lettuce, which has some kind of lice or bug on it. Please notice a little fly too, which is with it. It also attacks Asparagus Sprengeri and ferns. How can I get rid of it? Would hydrocyanic acid gas affect coleuses, moon vines, tomatoes, cabbage or other vegetable plants if used when they are dry at about ½ ounce to 1,000 cubic feet? Would it not be better to use it in the day time? L. D. P.

The insects on the lettuce leaves sent are green fly or aphides and tobacco in some form is the remedy for them. Lettuce, owing to its curly, crinkly leaves, offers so many retreats to the insects, that they are not easily reached. While tobacco dust is very desirable for any insects in the crown of a plant, it will not reach the under side, nor will a spray, hence the great popularity of smoking. Here is where the newer forms of tobacco—such as Nikoteen and Nicoticide, are a little lame. They are too expensive for the vegetable grower. In order to reach the last bug, a smoke must be mild but continuous, until the remotest bit of air is thoroughly poisoned. A quick, hot burning of tobacco is almost useless. It will hurt the crop before it reaches the pest.

The best method we have yet seen is to dry tobacco stems and cut in a feed cutter; then provide a 7-inch common stove pipe with bottom screen and handle and use these as smokers. Place some live coal in the bottom and pack full of the cut tobacco. Stand in the walks or suspend from roof. For a 20-foot house use one pipe every 50 feet at least, and as soon as one charge is burnt, replenish, and keep this up all night. If necessary, continue on cloudy days, all day, until the last fly is dead. Repeat this once a week. However, the remedy must go hand in hand with prevention. Be sure to give plenty of water at the root and keep the temperature down. Where soil is allowed to dry out and temperatures run high, green fly will breed on lettuce almost faster than they can be destroyed, while well grown lettuce is almost immune. MARKETMAN.

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points March 6 were as follows: New York, cucumbers, 75 cents to $2.25 per dozen; lettuce, $1.25 to $1.50 per strap; mushrooms, 20 cents to 50 cents per pound; mint, 40 cents to 50 cents per dozen bunches; radishes, $2 to $3.50 per 100 bunches; rhubarb, 30 cents to 60 cents per dozen bunches; tomatoes, 15 cents to 35 cents per pound. Cincinnati, cucumbers, $2 to $2.25 per dozen; mushrooms, 40 to 45 cents per pound. Boston, cucumbers, $12 to $15 per box. Chicago, cucumbers, $1.50 to $3 per dozen; lettuce, $3 to $3.50 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 15 to 25 cents per pound; radishes, 40 to 60 cents per dozen bunches; asparagus, $2.75 to $7 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.75 per pound; peppers, 40 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound, extra fancy, 14 cents; French endives, 25 to 40 cents per pound.

Huntington, N. Y.

The fifth annual carnation exhibition of the Horticultural and Agricultural Society took place on March 5. Owing to bad weather the exhibition was small. Carnation Bay State attracted much attention and received first prize in its class. This was exhibited by A. Roper, Tewksbury, Mass. They were splendid flowers on magnificent stems. White Bros., Gosport, N. Y., were awarded first for light pink with Winsor and first for 25 Beacon. H. T. and A. H. Funnell won first for 25 white with White Enchantress and the Huntington Nursery Co., first for 25 assorted. August Heckscher (A. Alins, gardener), won first for roses, both classes, for violets single and double, for mignonette, flowering plant, foliage plant, bulbous flowers and greenhouse vegetables. H. L. Pratt, Glen Cove, N. Y. (H. Gant, gardener), won first for freesias and sweet peas. A. H. F.

BEAUMONT, TEX.—C. J. Axelson, formerly of St. Louis, Mo., has built up quite a modern and extensive greenhouse and floral business here having erected two houses 24x162 and 14x110 feet, respectively.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-Presdent; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

TRADE in some of the eastern Canadian sections is said to be very brisk.

PENDELTON, ORE.—F. J. Prann intends starting a nursery here and he has arrived on the ground.

READING, MASS.—Chas. S. Pratt, has filed a petition in bankruptcy. Liabilities, $3,751; assets, $573.

LINCOLN, NEB.—W. M. Bonnewell and Earl Cooper have purchased a 10-acre tract of land for the nursery business.

BOISE, IDAHO.—Hume & Bryan, proprietors of the Wendell nursery, now have 20 acres prepared and part of it set to nursery stock. Their present quarters are already found to be too small and they are now planning on adding another 20 acres to it.

Spirea Van Houttei.

There are few shrubs to equal the spireas for a fine display and possibly none among the early flowering section that can compare with the subject of our illustration, S. Van Houttei. Its beautiful flowers are so freely produced that the bushes appear to be covered with snow and a large block of it in a park or garden makes a splendid display. It is also excellent as a single specimen on a lawn, and, being strictly hardy and not particular as to soil it may be planted anywhere without fear as to the result. But keep the man with the shears away from it in spring. The proper time to prune is after the flowers are past when the older wood can be removed to make room for the forming new shoots.

Herbaceous Phloxes.

The plants of herbaceous phloxes as usually seen in gardens are but a poor imitation of what they could be if good culture, rich soil and careful attention were given and the plants were divided or otherwise propagated regularly every year. Old, starved clumps with their centers burned out by the hot sun in summer and their roots vainly seeking moisture and feed are but caricatures of the fine plants, carrying noble spikes of flower, that result from well considered treatment. As the time is approaching for propagation growers will be wise to keep this in mind and, while retaining their old plants for this reason, if necessary, prepare a lot of young vigorous stock for next year.

As soon as the young shoots are about three inches high, take off the requisite number for stock and use them for cuttings. Cut just below a joint and remove the lower leaves; insert in sandy soil in a frame or cool house and keep moist until rooted. By the end of May these will be nice plants and may be planted out in nursery beds at about nine inches apart when they will grow into good stock for next season's planting and to take the place of old and worn out plants. A sufficient number should be grown annually and a similar number of the old ones destroyed, three years being about the period of their usefulness.

Division of the plants is another simple and excellent method of propagating and may be carried out rather earlier than propagation by cuttings. As soon as the shoots are well above ground take up the plants and divide them into several pieces according to the size of the clumps, allowing four to six good young shoots to each division. Throw away the hard, useless centers of the plants; they are not worth the trouble of handling. The divisions may be planted at once where they are to grow and will flower abundantly the first season. Three to five plants set out in a clump give a far finer effect than single plants, but care is needed that the same variety is used in each. A border treated this way is always a fine feature in a garden not too much exposed. Hot sun is one of the worst trials to phloxes. They delight in a cool, moist soil and a sheltered and semi-shaded position. But if the shade is cast from adjacent trees the position is not good as a rule, as the tree roots rob the phloxes of their nutriment. There are numberless varieties in many differing shades of color, and pure white and a selection is easily made.

Nurserymen and the Tariff.

At the recent meeting of the tariff committee of the Society of American Florists considerable comment was made on the fact that the tariff committee of the Nurserymen's Association, instead of recommending a tariff schedule in line to produce approximately the same revenue as the old schedule and to relieve some of the technical difficulties in the administration of the law had, on the contrary, on several items, recommended radical increase. For instance, they recommended that the duty on roses instead of the present rate of 2½ cents each, be made four cents each, thus proposing an increase of 60 per cent. It was said, by a member, a well-posted horticulturist, that, with the present disposition of congress not to increase import duties but rather to slightly lower them, that such attempts as this, on behalf of the nurserymen or any similar attempt by any industry must result in a failure to get any consideration or to remedy the numerous red-tape difficulties which really need adjustment, at this time. It is to be hoped that the conference proposition, mentioned elsewhere in this issue, will make some of these matters clearer to the nursery trade committee than they now seem to be.

Golden Leaved Trees.

The judicious use in parks or gardens of trees whose leaves are of other colors than green is of considerable advantage from an artistic standpoint, for such trees make distinct breaks of color, and if planted tastefully blend beautifully with the prevailing hue, and serve to brighten up the landscape at a period when the flowers of most trees have fallen. A comparatively wide selection of trees is at hand for the purpose, and their leaves may be golden, purple, bronze, silver, or variegated. It is, however, with the former only that we are dealing at the present moment, and a considerable number of such trees to select from are at hand.

Golden leaved trees comprise both deciduous and evergreen subjects, and examples may be obtained for almost any position. They may be used in a diversity of ways, each having its peculiar merit. The larger-growing kinds may be placed in conspicuous positions in large or small groups, whilst as isolated specimens they are equally advantageous. Such groups formed on hillsides are frequently effective, for, in an elevated position, they can be seen from a considerable distance, especially when backed up by green-foliaged trees. Isolated examples are also commendable, especially for lawns and other conspicuous places. The smaller-growing kinds may be requisitioned for the neater parts of the garden, where they are equally at home

SPIREA VAN HOUTTEI.

mixed with purple, silver, or bronze-foliaged subjects, or planted to form simple golden masses, whilst some may be used successfully as dot plants in shrubberies, especially where the prevailing hue is of a somewhat somber character.

The group may be roughly divided into two divisions, evergreen and deciduous. The former is composed largely of conifers, the only other family which produces suitable material being the holly. Coniferous trees may be divided again into two groups, golden and golden variegated. In the former group the leaves are golden throughout, assuming a more or less greenish tinge towards winter, whilst in the latter the leaves may be striated with green or gold, as in many yews, or the gold and green may be in patches. The latter condition is very noticeable in some of the cupressuses, and varieties exhibiting this character should be avoided, for they rarely behave satisfactorily. The golden patches frequently die, and the variegation gives the trees a more or less diseased appearance. In the following notes varieties of this description are not mentioned.

Cupressus Lawsoniana provides several golden varieties, which assume the same habit as the type, and grow to a considerable size. They are increased by means of cuttings in autumn, or by grafting on to stocks of the type in spring. Good varieties are aurea, lutea, and gracilis aurea. The latter is of very elegant habit, and a distinct acquisition. The Japanese C. obtusa provides several varieties, good forms being aurea, tetragona aurea, and Crippsi. The latter is a strong-growing, richly-colored variety of good habit, whilst tetragona aurea is of slow growth, rather low stature, and good color.

In the retinospora group (C. pisifera) the best golden variety is plumosa aurea. This forms a distinctly beautiful specimen of plumose habit, with delicate golden leaves. It is well adapted for a conspicuous place on a lawn. The American arbor-vitæ (Thuya occidentalis) provides several golden varieties; aurea and lutea are the best, but they are inferior in merit to the various varieties of cupressus. Thuya plicata aurea is a strong-growing form of the "canoe cedar," whilst zebrina, a variety of the same species, has foliage curiously barred with green and gold. A golden variety of the Chinese arbor-vitæ (Thuya orientalis) is in cultivation. This is of rather dense, compact habit, and of slow growth. In addition to these there are golden varieties of Pinus sylvestris, Pinus cembra, and the common spruce. The various yews are very ornamental, but more frequently assume a bush-like habit than tree-like proportions. Good ones are T. baccata elegantissima, Barroni, Dovastoni aurea variegata, adpressa aurea, and fastigiata aurea.

For general purposes the deciduous section of the group is possibly of greater value than the evergreen set, for the various varieties thrive in places where coniferous trees would not have much chance. Catalpa bignonioides aurea is one of the best-colored trees we possess, the color being a rich gold, whilst it remains good from the time the leaves appear until they fall. Unfortunately, it is of low stature, growing in width more rapidly than in height. Amongst the sycamores and maples there are several golden-leaved and golden-variegated varieties. A few of the most conspicuous are Acer Negundo Californicum aureum, also known as A. Odessanum, a conspicuous and strong-growing tree of good color; A. Negundo aureo-variegatum, a variegated form of the same type; A. Prinz Handjery, a golden-leaved form of the sycamore, of rich color when the leaves expand, but fading to a yellowish-green tinge towards midsummer; a golden-variegated form of the sycamore, known as flavo-marginatis, is conspicuous, and keeps its color throughout the summer and autumn, while lutescens, a golden-leaved Acer platanoides, is very pretty.

A set of three elms provide change, one of them, a form of Ulmus campestris, known as Louis van Houtte, being specially worthy of notice. It is of strong growth, and rapidly forms a fine specimen. A form of the same species, known as antarctica aurea, is recognized by its weak growth and small golden leaves, whilst U. montana fastigiata aurea is a golden form of the fastigiate mountain elm. Two oaks are of value, Quercus pedunculata Concordia and Q. rubra aurea, both having rich golden foliage. For damp ground Alnus glutinosus aureus and Populus deltoidea aurea are both useful trees, the latter being a particularly fast grower, and a good subject to plant for a quick effect. Amongst ashes, a golden-variegated form of Fraxinus Americana, called aucubæfolia, is showy, and worth a place. In addition to the above-mentioned, there are several of inferior merit, a few of which are Ptelea trifoliata aurea, Pyrus Malus aurea, Laburnum vulgare foliis aureis, Acer dasycarpum lutescens, and Pyrus aria chrysophylla. As a miniature tree the golden form of the Japanese maple, Acer Japonicum, is very beautiful, while the golden-leaved varieties of Acer palmatum are equally desirable.—Gardeners' Magazine.

Helianthus Laetiflorus.

Last season I was much impressed with the serviceableness of Helianthus lætiflorus in a broad border in my garden, says a correspondent of the Journal of Horticulture. The year 1907 was disappointing for late-blooming perennial sunflowers, but in 1908 the weather conditions were better for these flowers. In 1907 even H. Miss Mellish did not flower with me, the frost coming so early that its buds were destroyed ere they could open. H. giganteus was also injured, while H. lætiflorus did not open either. There are several things being sold or grown under the name of this plant, but I believe that mine is the true plant. As stated in some works of reference, it resembles some forms of H. rigidus, but it seems free to a great degree from the running tendency of the varieties of H. rigidus, although erect growing and of the general appearance of that sunflower. With me it is about four feet or five feet high, and gives a great number of smallish yellow flowers. It is said to bloom in August, but it has never flowered with me so early, and last year it was in the very end of September when the first flowers opened.

Some of Our Specialties

	Each
Boxwood, Pyramid shape, 2½ to 3 ft. high, very heavy	$1.75
3 to 3½ ft. high	2.50

FREMONT, NEB.—The plans for the improvement of C. H. Greene's greenhouse plant call for the enlargement and reconstruction of all the present houses from 18x120 feet to 18x139 feet and the erection of a new one of the same dimensions. All of the present houses will be raised from a height of four and a half feet to six and a half feet. The reconstruction will commence about May 1.

It takes good, healthy plants, free from rust and other diseases, to produce a crop like this. Our plants have retained their health and vigor since the date of this photograph, which was taken three years ago. It takes healthy plants to produce healthy cuttings, so, if you want cuttings of this kind, send us your order.

THE DINGEE & CONARD CO., West Grove, Pa.

Providence, R. I.

Business remains steady but not brilliant. Carnations and roses hold at the usual winter rate, and are improving in quality.

A delegation of 10 members from the Florists' Club recently visited the Boston club and were entertained with speeches and luncheon. The night was stormy and the local delegation was justly proud of its numbers. The Boston club promised to be represented at one of our local meetings in the near future. Last Friday Messrs. Craig, White, Finlayson, Duncan and Cooper of the Boston club, accompanied by Messrs. McCarthy and Macnair of this city, visited the extensive grounds of Senator Aldrich at Warwick. Despite a windy day, the visitors made a thorough inspection of the beautiful property and voted it the best thing along our New England shore. Mrs. Greene prepared a splendid lunch which was served in the new stone house. The party also visited J. A. Foster's, but lacked the company of Manager Burke, who was down with grip that day. By 4 p. m. the party were at the Budlong rose farms in Auburn, where, in charge of Mr. Pritchard, they were shown over this amazing enterprise, with its great houses of Killarney, Bride, Bridesmaid, Chatenay and Richmond, all in the pink of condition and flowering well. One house of Bridesmaid looked like a streak of pink ribbon, so abundant were the blooms. The delegation on the way to the station stopped off long enough to see the store of Macnair-Florist and were given a very good working idea of the establishment, with its salesroom, designing department and flower-coolers. M. M.

PREPARE FOR EASTER

From Whom Will We Purchase Our Easter Supply?

An Immense Stock of Choice Easter Plants Now Ready for Immediate Shipment.
Blooming Easter Week or Before if Desired.

"From whom shall we purchase our Easter supply this season?" That seems to be the cry all over the country. "We have tried so many already. I know what I am going to do," some sensible man says. "I shall go back to Godfrey Aschmann. He is the best and most reliable man in the business. What he advertises he has and there is no bluff about it, I tell you his usual stock of **Azaleas** can't be beat, and the **Lilies** he has this spring are the finest I have ever seen. No wonder. He imports them direct from Japan. He has a friend in Japan who looks after his interests and sends him the cream of Japan's plants. He has enough to supply all, and I tell you no lie when I say that his other plants, such as **Hydrangeas, Cinerarias, Spireas, Ficus, Araucarias, Palms, Hyacinths, Tulips, Daffodils, Etc.,** are of such excellent quality that they will make a man's mouth water, and they are so remarkably cheap that we often wonder how he can do it."

AZALEA INDICA.

We are headquarters for these plants for the past twenty-five years. We make a specialty of importing large quantities of this so well known favorite Easter novelty Grown for us in Ghent Belgium, by an Azalea specialist. Have now three houses full of the choicest. Only well known American varieties are imported They are planted in the fall, as soon as they arrive from Belgium, into 6, 7 and 8 in. pots, planted in greenhouses and kept cool during winter. They are now in excellent condition, covered with buds, just right for Easter.

☞ Please bear in mind facts (mostly unknown to some Azalea growers) that fully 30 to 40 per cent of the newly imported Azaleas in dormant state will lose their buds and foliage during the long transportation of the sea voyage and during winter up to Feb 1 and have to be kept over for another year

☞ We only ship good stock and full of buds and flowers, and therefore you can't expect Azaleas at this time to be as big and as cheap as if you would buy them in dormant state in the fall.

☞ What is the name of the best double pink Azalea? Mme. Van der Cruyssen is the name. Originated by the well known Azalea specialist, Mr. Van der Cruyssen of Belgium. Millions are raised every year and shipped into every part of the globe from Belgium. We have a big stock on hand of this well known variety. Every plant is as round as an apple, covered with buds just right for Easter. Have all sizes for 60c, 75c, $1.00, $1.25, $1.50, $1.75 to $2.00 each.

Deutsche Perle (double white) 75c, $1.00, $1.25 to $1.50; Bernard Andreas Alba (white) we have mostly big plants of this variety, $1.50, $2.00, $3.00 to $3 50, a few at 75c, $1 00 to $1 25; Niobe (also white), 75c, $1.00, $1.25, $1.50 to $2.00 each.

Vervæneana, De Schryveriana (double variegated), 75c, $1.00, $1.25 to $1.50; Dr. Moore and Memorie de Louis Van Houtte (double pink), $1.00, $1.25 to $1.50; Apollo (red), 50c 60c, 75c to $1.00; other good varieties, such as John Llewellyn, Emperor of Brazil Talisman, Helena Thielmann, Illustre, etc., 75c $1.00 to $1.25.

When we are out of one color we send the next similar color; also if we are out of the size ordered, we send the next size, either above or below the price mentioned.

Easter Lilies. Lilium Multiflorum, the genuine Japanese Easter lily, directly imported by us. We have a friend in Japan who looks after our interests there. He picks out for us only the good, healthy ones, and marks them while they are growing, the 10-in. bulbs, and therefore he ships to us the cream of the plants of Japan. We have Lilies this year to burn; can supply, if nothing happens, every customer and others who want Lilies. If you see them growing in our greenhouses, you must all admit they are "crackerjack9"; we sell them cheap, too. Where other florists get 15c per bud, we only charge you 10c per bud for plants in 6 in. pots, having 5 8 10 and more buds to the plant. Plants under 5 buds, 12c per bud, 6-in. pots.

Jerusalem Cherries, large plants, full of buds, 6 to 6½in. pots, 35c, 50c.

Moonvines (Ipomœa Multiflora), best white Moonvine for which we have a world-wide reputation, now ready 2½-in. pots, $5.00 per 100.

Araucaria Robusta Compacta, Glauca and **Excelsa.** Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds same as when we first started. Why the Arsucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta. Specimen plahts, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3 00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variesy, very graceful snd beautiful, Specimen plants, 6-7 8 in. pots, 4-5 year old, 4 5-6 tiers, 20-25-30-32 in. high, same in width, $1.50, $1.75, $2.00, $2 50 to $3 00 each.

Araucaria Excelsa, 3-4-5 year old 4-5-6-7 tiers 6-in. pots, 20-25 30-35 in. high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

Hybrid Rose Bushes, grafted, long plants, 30 inches to 3 feet high, John Laing Brunner, Magna Charta etc. 6-in pots, 50c, 75c to $1.00. **Rambler Dorothy Perkins,** etc., 5½ in., 50c; **Hermosa,** 5 in., 35c.

Begonia new improved Erfordi, 5-in., $2.00 per doz ; **Begonia Flambeau** 5-in $2.00 per doz

Spirea Gladstone. This variety, owing to the dry summer in Holland last year, is very scarce this Easter, but we were fortunate enough to secure sufficient to fill our usual house, and the plants are now in fine condition, full of buds, just right for Easter, 6-7 in. pots, 75c to $1.00 each. Spirea Floribunda, Japonica and Superba, 6-in. pots, 25c, 35c to 50c.

Primula Obconica, 5-in. pots, $2.00 to $2.50 per doz.

Double Daffodils, Von Sion, best yellow, 3 bulbs in a 5-6 in. pot $2.50 per doz. pots.

Hyacinths, 4 best colors, King of the Blues, Grand Maitre (light blue), La Grandesse (best white), Gertrude (best pink), 4-in. pots, $12 00 per 100. Now outside in cold frames. Two weeks will force them into bloom.

Asparagus Plumosus Nanus, 3-in., $5.00 per 100.

Hydrangea Otaksa, in bud, 6-7 in. pots, 35c, 50c 75c to $1 00 each.

□ **Cineraria Hyb. Graddiflora,** H. F. Michell's new improved strain. Our plants of this strain are twice the size of those of other years, with perfect, large, green foliage. Some of the plants are almost as large as a bushel basket. 6 in. pots, 25c 35c, 50c 75c to $1.00 each.

Areca Lutescens, 4-in. pots, three plants in a pot, 25c.

Ficus Elastica (Rubber), 5½ to 6 in. pots 25c; 30c, 40c to 50c.

Boston Ferns, 6-in pots 50c; 7-in. pots, 75c; $1.00 to $1.25; 8-in. pots, $1.50.

Scottii Ferns, 5½-in. pots, 40c; 6-in. pots, 50c; 7-in. pots 75c to $1.00; 8-in. pots, $1.50.

Whitmani Ferns, 7-in., as big as a bushel basket, 75c, $1 00 to $1.25; 9-in. pans, as big as a washtub $1.25 to $1.50.

Neph. Amerpohli, 5¼ 5½ to 6 in. pots, 30c, 40c and 50c; 6-in., 60c to 75c.

Kentia Belmoreana, 5 good leaves, 5¼ to 5½ in. pots 25 to 30 in high 50c to 60c; 4-in., 35c.

Kentia Forsteriana, 6 to 7-in. pots, 25, 30, 40 to 45 in. high, 75c, $1.00 $1.25, $1.50 to $2 00 each

Kentia Forsteriana, 5¼ to 5½ in. pots, 20 to 25 in. high 50c, 60c to 75c.

Have an Immense Stock of Easter Plants.

Please state if in or out of pots.

☞ All goods must travel at purchaser's risk only. Cash with order please.

If a pane of glass cracks it feels more comfortable between the bars; disagreeable indeed—but if you slip a Glass Repair Clamp over the crack you can see yourself smile.

$1.00 a 100 by dealers or by

A. KLOKNER, WAUWATOSA, WIS.

Albany, N. Y.

Among the very creditable designs lately by local retailers was a large shield by W. C. King for the funeral of Frederick J. Kingsbury, for many years an employe of the local office of the American Express Co. The shield was in the form of the company's well known trade mark and was made up of Bride roses, orchids and violets. The Masonic fraternity also had Mr. King make up a large standing cross of galax and callas, and friends contributed two pillows of Bridesmaid roses, orchids and violets.

Otto Burkhart, 399 Quail street, for many years in the employ of Whittle Bros., has resigned his position and will start in business as a grower. He will erect on his large lot at Quail street and Woodlawn avenue this spring a carnation house 30x150 feet.

Edward P. Tracey of the Rosery and Philip Warner of Newtonville are enthusiastic over their recent visit to the exhibition in Horticultural Hall, Boston. Both agree that if you want to learn what is going on in the trade that is the place to go. R. D.

WATERBURY, CONN.—Truman S. Lewis, of Woodlawn terrace, will build a greenhouse 20x50 feet.

WIZARD BRAND MANURES

TRADE MARK

Dried, screened and packed in bags of 100 lbs. each

Mention the American Florist when writing

Hartford, Conn.

There was a fine display of carnations February 26, at the meeting of the Connecticut Horticultural Society in the county building. On a long table in the center of the room were large vases filled with pink, red and white carnations. Among the varieties exhibited were Enchantress, Red Lawson, Rose Pink Enchantress, White Lawson, Beacon and Pink Lawson. Miss Helen Whiting of West Hartford was given first award for her exhibit, A. N. Pierson of Cromwell second and J. F. Huss third. W. H. Shumway of Berlin was given honorable mention for his exhibit.

A paper on carnations was read by Howard A. Pinney, tracing them back 300 years before Christ and describing the evolution in modern times. In behalf of the Historical Society, Geo. W. Smith presented to the retiring secretary, Alexander Cumming, Jr., a purse of money. Mr. Cumming goes to Seattle, Wash., and this was his farewell to the society of which he has been secretary for two years. Geo. W. Smith was appointed secretary to succeed him.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

Minnesota State Florists' Association.

The monthly meeting was postponed from February 16 to 23. The night being stormy the attendance was smaller than usual, but this was more than made up by the enthusiasm shown by those present. A. Swanson gave a very clear explanation of the word "rarity" as used in connection with judging plants and on request agreed to furnish a set of rules to be used in connection with the cards in judging exhibits.

The state fair committee reported the prospects poor for receiving increased premiums or additional space for exhibits at the next fair. Messrs. Olson, Swanson and May were appointed a committee to confer with the St. Paul Institute of Arts and Sciences and endeavor to enlist its co-operation and assistance in holding a fall flower show. Carl Haugen was awarded a diploma on Princess of Wales violets scoring 96 points and a certificate of merit on three distinct varieties of cyclamen scoring 83 points. E. Nagel & Son were awarded an honorable mention on Lawson and Winsor carnations. The next meeting of the association will be held Tuesday evening, March 16, at the hall, 510 Snelling avenue, St. Paul. Mr. Frasier of the State Agricultural School will address the meeting on "Fertilizers."

S. D. DYSINGER, Sec'y.

VREDENBURG & CO.,

ROCHESTER, NEW YORK

Kalamazoo, Mich.

The Lenten season is having its effect as trade has dropped off, but this is always the case. March opened with glorious spring weather which helps the trade some. The quality of stock is excellent throughout the market. Carnations are coming in so heavily that they are accumulating in spite of the best efforts of the wholesalers. American Beauty roses have increased largely so that prices have declined about 30 per cent. The cut of Bride, Bridesmaid, Killarney and Richmond has so increased that all grades are cheaper and the short stock has suffered the most. Bulbous stock is in good supply and selling at prices that can hardly be profitable to the growers. Lily of the valley, violets, sweet peas and freesias are abundant. Lilies are also very plentiful.

FEBRUARY BUSINESS.

February was an excellent month. Roses were in light supply and commanded excellent prices. St. Valentine's day was much better than last year and made a good record and Lincoln and Washington's anniversaries each contributed their share.

NOTES.

H. A. Fisher Co. reports that wholesale orders came in so fast last month that many orders had to be cut in two on account of goods being so scarce. H. A. Fisher has been under the weather for the past week and expects to go to Mt. Clemens for about 10 days. Jack Fisher, formerly manager of this company, is now in Battle Creek, in charge of the branch store.

The Central Nursery & Floral Co. is doing a nice business and advertising quite freely in the daily papers.

VENTILATING APPARATUS.

Louisiana Red Cypress

As described by Bassett & Washburn, Chicago.

"Replying to your favor requesting our experience with Pecky Cypress, we will say we have been using this grade of Cypress in our greenhouses and plant benches for the last ten or twelve years and so far have not found any of this wood that has all rotted out. We formerly used Hemlock and Pine, but found that two-inch stock only lasted about four years, while so far we have had no Pecky Cypress rot out in ten or twelve years. We use clear Cypress for all our roof work, ventilators, etc., and it is very satisfactory. We think it is the only kind of lumber for the purpose."

IT IS THE MOST DURABLE WOOD KNOWN. Ask about it at your local lumber yard or write

Brampton, Ont.

The Dale estate's elaborate shipping rooms were the center of attraction March 5, when the firm gave a supper to their employes, and the growers, under the direction of W. G. Peacock, provided an entertainment of a very high order. About 150 employes, wives, and sweethearts, partook in the merrymaking and did justice to the supper so nicely got up by Mrs. E. Dale. We consider this kind of gathering worthy of imitation, as it brings the men into closer contact with one another, and gives them a good feeling towards their employers. The Dale Estate provides trade papers, newspapers, magazines, etc., for the use of the employes, as well as a fine recreation room suitably furnished. Manager T. W. Duggan is to be congratulated on his thoughtfulness for his men by whom he is held in high esteem. C.

Lent seems to interfere less this year than usually with the quantity or quality of the cut flower business. The Dale Estate stock has picked up after the heavy Christmas clearance, and although it is difficult to supply the trade with carnations in all grades, the rose crop is exceedingly good for the time of year. The Difference.

"A primrose on the river's brim
A yellow primrose was to him"—
So, in his idle hours,
Old Wordsworth sang, but, oh, the rose
That in the florist's window grows,
Means all the money in your clothes
If Maud is fond of flowers!

The Rose.

"When nature shaped her rustic beauties
The bright-eyed daisy, the violet sweet,
The blushing poppy that nods and trembles
In its scarlet hood among the wheat

"She paused and pondered; and then she fashioned
The scentless camellia, proud and cold,
The spicy carnation, freaked with passion,
The lily pale for an angel to hold.

"All were fair, yet something was wanting
Of freer perfection, of larger repose;
And again she paused; then, in one glad moment,
She breathed her whole soul into the rose."

American Rose Society.

Tenth Annual Meeting, Buffalo, N. Y., March 17-19.

OFFICERS ELECTED:

August Poehlmann, President. | **Benjamin Hammond, Secretary.**
F. R. Pierson, Vice-President. | **Harry O. May, Treasurer.**

NEW YORK NEXT MEETING PLACE.

A Great Show of Eastern Cut Blooms.

The display of cut flowers at the tenth annual exhibition of the American Rose Society held at the Iroquois hotel, Buffalo, N. Y., March 17-19, was of exceptional merit. Only two of the western growers staged exhibits, the Poehlmann Bros. Co., and Bassett & Washburn, both of Chicago. It was felt as a great disappointment, however, that there was not a single rose plant in the show. It was claimed by some of the growers that exhibition plants were backward this season on account of the dull, sunless weather, which appears to have been general east and west.

The F. R. Pierson Co.'s magnificent display of White Killarney was the feature of the exhibition. About 500 superb blooms were artistically arranged in seven handsome glass vases on three round tables, plants of nephrolepis being used as a groundwork. The vases were shipped from Tarrytown specially for the occasion and this exhibit demonstrated beyond doubt that it pays to spend a little time and money for effective display. The two adjoining dining halls of the Iroquois hotel afforded ample space for as many more exhibits and the courtesy of the hotel staff and the local trade left nothing to be desired. The judges in the general classes were Peter Bisset, Geo. Asmus and Lawrence Cotter, while A. Farenwald, Chas. Guenther and A. Benson scored the novelties.

The Business Meeting.

President Poehlmann called the first session to order soon after the schedule time. There was a good attendance and much interest was taken in the proceedings. The reports of the various officers having been presented, the name of Peter Crowe, Utica, N. Y., was added to the list of life members. F. R. Pierson on behalf of the Horticultural Society of New York and Charles B. Weathered, representing the New York Florists' Club then presented invitations for New York as the next meeting place and these were accepted.

A brisk discussion followed on premiums offered for specific exhibits, some claiming that such prizes should revert to the society for general use when not awarded as the donor intended, while others held that the donor should retain the right to name the object for which his premium may be awarded at future exhibitions or withdraw it altogether if he so desires. The subject was referred to F. R. Pierson, J. A. Valentine and A. Farenwald as a committee for consideration. The matter of uniform vases for competitive exhibits brought out considerable discussion, but the question was left unsettled for the present.

H. A. Barnard, representing Hugh Low & Co., Bush Hill Park, London, Eng., was next called on for a few remarks, and referred in glowing terms to the superiority of American indoor roses and carnations. Mr. Barnard thought, however, that English outdoor roses were without a rival, but was speedily put right on this point by a number of those in attendance, Connecticut, Massachusetts and the Pacific coast being cited as producers of outdoor stock of the highest quality.

In the election of officers, President Poehlmann, Secretary Hammond and Treasurer May were chosen to succeed themselves, and F. R. Pierson was elected vice president. Wm. F. Kasting and Peter Bisset were elected members of the executive committee for three years, the latter succeeding himself. The session closed with W. W. Coles' excellent paper, "Why so Many Small Growers Fail With Roses."

Thursday's Proceedings.

On assembling on Thursday morning, Secretary Hammond presented the report of the judges, which was adopted.

F. R. Pierson, for the committee on the regulations of premium offers appointed the previous day, presented the following: "Your committee recommends that no special prizes should be advertised until they have been deposited with the society, and that all special premiums offered should be accepted on condition that they revert to the premium fund of the society unless the donor otherwise specifies." The recommendation of the committee was adopted.

Peter Bisset read a telegram from Mrs. G. M. Hubbard, Washington, D. C., offering the society a gold medal free of all expense, the medal to be awarded to the raiser of the best new rose every five years. The offer was accepted with a hearty vote of thanks and Mrs. Hubbard was tendered the honor of life membership in the society.

G. D. Leedle, Springfield, O., next presented his able paper on "Roses as Popular Home Flowers and How to Grow Them." Leonard Barron, New York, on behalf of the publishers of the Garden Magazine, tendered the society three medals, gold, silver and bronze, to be offered for the best new types of garden roses or for progressive work in that direction. The offer was accepted and referred to the executive committee.

The excellent paper on "The Rose Garden," by J. F. Huss, Hartford, Conn., was then read by President Poehlmann in the unavoidable absence of the author.

Resolutions on the deaths of E. V. Hallock and L. M. Noe were presented and adopted previous to the banquet tendered the visitors by the Buffalo Florists' Club at the Iroquois hotel in the evening, instead of Friday evening as scheduled. A telegram was sent to Robt. Craig, Philadelphia, Pa., congratulating him on the sixty-second anniversary of his birthday. The banquet was followed by Leonard Barron's illustrated lecture, which closed the business of the convention.

President Poehlmann's Address.

Following previous custom, it devolves upon me to address you at this, our tenth annual convention. Through the courtesy and cordial invitation extended to this society by the Buffalo Florists' Club, represented by its able leader William Kasting and his associates, we find ourselves here to-night. What these men have accomplished to make us feel welcome, no one can fail to see.

Buffalo, lying as it does, almost midway between the large rose growing centers of the east, west, north and south, is ideally situated for our convention and exhibition. It is only eight months ago, since the Buffalo Florists' Club, in conjunction with the Niagara florists, participated in entertaining the Society of American Florists most royally, ample proof, that we are indeed in the hands of friends, who appreciate our coming, and whom we in turn can but thank most heartily for their brotherly, generous, hospitable spirit.

Here then, are past friendships renewed, new friendships formed, and opinions exchanged,—all of which serve to make us enjoy this old world, and enrich us in the knowledge of the beautiful. From these gatherings, inspirations are given to something more lofty—more divine; something in the future superior to what we had heretofore. Here we find the real enthusiast, wrapped in wonder at the progress made in the growing of the queen of flowers, the rose.

Who, that has any material interest or love for roses, can help but admire the beautiful specimens arrayed here for our inspection. Who of you, lovers and growers of the rose, but came to this gathering with a certain object, that object—to improve yourself in your chosen profession. In the matter of outdoor

August Poehlmann.
President American Rose Society.

roses and other subjects, so many valuable suggestions have been submitted in former conventions, which appear in the annual bulletins, that I hardly know what more to offer.

To my mind, the field for and sale of outdoor roses is unlimited wherever

F. R. Pierson.
Vice-President-Elect American Rose Society.

good rose soil is located or obtainable. Study well your varieties, their habits, wants, and hardiness, the soils and localities wherein they will thrive best, and then proceed. Comparatively little has been done in this line, when we consider the immense, unbounded resources at our hands, and the society's aim, which is: "A rose for every home, a bush for every garden."

This branch of the work is left almost entirely to the nurserymen, many of whom have established immense businesses and who, like the commercial rose growers, are ever on the alert for something new with which to delight their customers, and thereby advance their own interests. By placing the roses best adapted to the different localities, past the experimental stage where good results are obtained, you will do much toward discrediting the doubts and fears of the investing public, and create an unprecedented demand.

In this connection, it occurs to me that a good plan to bring outdoor roses more prominently before the public, would be to obtain permission from public officials to plant plots or individual bushes in public squares, gardens or parks, without charge, showing the names of the varieties and of the party who supplied them, in small yet plain letters. One of the principal attractions at these annual exhibitions is to see these new creations of the floral world, these new wonders of the rose kingdom. We see, we like, we buy, we try. They make good, or we lose out. On first failure, we may try again.

A race-horse is good only when he makes good. He may be a good looker but be out of the running. So with many of our pets. They are relegated to the background if the renumeration is not sufficient. The ambitious grower is never satisfied to leave the trial of new varieties to his neighbor, but will try himself to find a winner. Often these new things turn out pretty hot ones. It is quite natural that there are many disappointments. It cannot be otherwise. One winner, however, will cover the shortcomings of a multitude of raw ones.

The breeders, hybridizers, and introducers of new roses deserve encouragement and support, even if they manage to put one over occasionally. New varieties put life in the business. Keep on striving for high standards. The trade demands it. In the cut roses, a number of new delegates are in the field looking for recognition. Notable among these, are White Killarney and My Maryland. Both will be extensively grown. The society offers ample reward to its exhibitors, and deals fairly with all new introductions.

Your various committees have faithfully attended to, and accomplished the work imposed on them. Your secretary in particular has been indefatigable and conscientious in the full performance of his duties, to which I can attest by reason of his voluminous correspondence, and deserves the sincere thanks of this society. I would like to impress once more on all interested in the sale and culture of outdoor roses, the need of disseminating reliable knowledge among the public.

During our meetings a number of very instructive essays will be read by men experienced in their lines, and which will be entitled to our careful thought and consideration. Discussion, which usually follows, will open up new sources of knowledge and give to us new ideas. Of one thing we are certain—we are progressing with the times. Let us forever keep on doing so.

To further the society's work and aim, we want it to be known, that all lovers of the rose are welcome to our ranks. The annual bulletin, which contains much valuable information, is published at considerable expense by the earnestness and care bestowed on the various subjects.

To place the society on a solid financial footing, we ask you to be with us. Annual membership dues are $3. Life membership $50. To the Buffalo Florists' Club and associates, who have provided the society with workers to carry on this exhibition, and have looked after the society's welfare, I wish to again express our hearty thanks.

Treasurer May's Report.

The following is the report of the treasurer of the American Rose Society for year ending March 12, 1909. In addition to the general account given below, four life members have joined the society, making a total of 59. The money of the life membership is added to a permanent fund, the interest from which is used in current expenses.

Receipts	$2,152.07
Disbursements	1,968.93
To balance on hand	$183.14

Permanent fund, $2,950.00.

Secretary Hammond's Report.

No society could have a more loyal set of backers than has the American Rose Society. The past year has seen the society sustained by a number of men who claimed the privilege of assisting in meeting all expenses. President August F. Poehlmann has taken the keenest interest in affairs. Separated by distance as a society such as this is it requires a long view to keep all matters together and moving. The schedule of prizes has been carefully revised by the committee appointed by the president, J. N. May, Robert Simpson, Alexander Montgomery, Frank R. Pierson and Benjamin Hammond. The first schedule was made up 10 years ago and remained in force until this season. Of this schedule Edwin Lonsdale, of Girard college, Philadelphia, says it is good for five years.

Last November, during the National Flower Show in Chicago, a general meeting of the Rose Society was held at which time the sum of $350 was pledged by the gentlemen then present as a fund for the prizes to be offered this spring. At that meeting the important matter of ways and means was talked over freely. The offer of medals as prizes of honor was advised and stress was made of the propriety of making use of the society's medals. The mint of the United States at Philadelphia has the society die. There never has been a gold medal struck the value of which would be determined by its weight when struck. A few silver and bronze medals were once made. These have been distributed except one bronze medal.

The secretary would suggest as one practical way to largely extend the usefulness and membership of this society that one silver and one bronze medal be offered as a rose prize to local horticultural societies to be known as the American Rose Society's prize for the best display of roses without any regard to variety at the local show. But that each society applying for the same, shall have at least one regular and two associate members of the American Rose Society. This idea is advanced as the outcome of the discussion at the meeting referred to above. To put this to an available test I am authorized by a gentleman to say that he will pay for six silver and six bronze medals to be used as a start in this direction to popularize our society.

The standing of the American Rose Society seems to be growing, and it should be, for the rose as a commercial flower is the most commanding. The rose growers of America should recognize the society's essential value. President Poehlmann, in response to a demand by interested parties, has appointed a committee to pass upon the very important matter of registration of new roses. The chairman of that committee is Ex-president Robt. Simpson. This committee would give us prestige as a regular standing committee as large interests may come before it for consideration.

The annual bulletin of the society was issued after the close of the calendar year 1908, thus bringing all business up to the year's end. This book tells its own story. The cost of it was a little over half covered by the advertisements furnished by a few at a rate of $10 for each page. Without the least taint of discourtesy the secertary would bring a matter to notice, that is a request that when a prize is offered in money that it be sent in as soon as possible and, furthermore, if named for a special purpose and not so won, it may revert at once to the general fund to make good the total amount always required for the regular prize list.

Our life membership has not increased the past year. Our invested fund has, however, reached the total of $2,950 in the hands of our efficient treasurer Harry O. May. We have tried to keep in touch with each of our members on record but so far the responses to the annual due bills have not been as full as is desirable. We have received notice of the death of Miss C. A. Pryer of New Rochelle, N. Y., one of our earliest members and constant supporters.

At the last annual meeting the subject of a rose journal was one of moment. The tentative effect to start it into being with the cost defrayed by an advertising card was side tracked by the proposition to launch and support it by subscription for a year as a trial. This plan never materialized. In the meantime the Gardeners' Chronicle, of New York, has offered to give a magazine page each issue for the use of the American Rose Society as its popular paper. I hold a little money sent in for the rose journal project which will be returned.

The show before us is the tenth annual exhibition. Those previously held were in New York, Philadelphia and Boston. In these cities the exhibition was held for succeeding years, in Washington and Chicago once and now in Buffalo, the metropolitan city of western New York, in as fine a hall as the best we have had.

ROSE WHITE KILLARNEY.

The secretary herewith desires and properly so to extend his thanks for the various courtesies and aid he has received from many persons in the interest of the society and most particularly to the editors of the AMERICAN FLORIST, The Florists' Exchange, The Florists' Review and Horticulture. If the Rose Society has fame it is largely due to the friendly support received without cost from these publications.

The Awards.

Vase of American Beauty, 50 blooms, first prize offered by Traendly & Schenck, New York.—Brant & Hentz Floral Co., Madison, N. J., first; Myers & Samtman, Philadelphia, Pa., second.

Vase of Killarney, 50 blooms, first prize offered by Erie Floral Co., Buffalo, N. Y.—Adolph Farenwald, Roslyn, Pa., first; Bassett & Washburn, Chicago, second.

Vase of Richmond, 50 blooms, first prize offered by F. R. Pierson, Tarrytown, N. Y.—E. Towill, Roslyn, Pa., first.

TWENTY-FIVE BLOOMS—OPEN.

American Beauty (stems not less than four feet nor more than six feet). Prizes offered by W. J. Palmer & Son, Buffalo, N. Y.—Bassett & Washburn, first; E. Towill, second.

Bride.—Poehlmann Bros. Co., Chicago, first; F. Burki, Pittsburg, Pa., second.

Bridesmaid.—Peter Crowe, Utica, N. Y., first; F. Burki, second.

Cardinal.—Poehlmann Bros. Co., first.

Rhea Reid.—Wm. H. Elliott, Brighton, Mass., first; Peter Crowe, second.

My Maryland.—Robt. Simpson, Clifton, N. J., first; A. N. Pierson, Cromwell, Conn., second.

Mrs. Jardine.—Robt. Scott & Son, Sharon Hill, Pa., first; E. Towill, second.

Mrs. Potter Palmer.—Poehlmann Bros. Co., first.

Perle des Jardins.—Poehlmann Bros. Co., second.

Mme. Abel Chatenay.—Robt. Simpson, first; Poehlmann Bros. Co., second.

Ivory.—United States Cut Flower Co., Elmira, N. Y., first.

Co., Philadelphia, Pa.—Adolph Farenwald.

Twenty-five American Beauty. Prize $25, offered by The Pulverized Manure Co., Chicago.—E. Towill.

Special prize of $25 offered by the Lakeview Rose Gardens, Jamestown, N. Y.—Robt. Simpson.

SMALL VASE OF TYPICAL KILLARNEY BUDS.

Killarney.—Poehlmann Bros. Co., first; Peter Crowe, second.

Richmond.—E. Towill, first; Wm. H. Elliott, second.

Best and largest collection of teas and hybrid teas, six or more varieties, not less than 12 of a kind. Prizes offered by Robt. Simpson, Clifton, N. J.—Gude Bros., Washington, D. C., first.

SPECIAL PRIZES.

Silver vase, value $40, offered by A. N. Pierson, Inc., Cromwell, Conn., for 100 Richmond.—Adolph Farenwald.

For the best arranged vase or other receptacle containing not to exceed one dozen roses (American Beauty barred). No foliage or other accessories except rose foliage permitted. The competition to be open to all florists and employes. Prize $10 first; $5 second. Both offered by J. A. Valentine, Denver, Colo.—Wm. H. Grever, first; E. A. Slattery, second.

Twenty-five Killarney, pink or white, prize silver cup, value $25, offered by Welch Bros., Boston, Mass.—Waban Rose Conservatories, Natick, Mass.

Thirty-six My Maryland, stems not to be less than 20 inches long on single growth. Prize $25, offered by A. Farenwald, Roslyn, Pa.—Robt. Simpson.

Twenty-five My Maryland. Prize $10, offered by John Cook, Baltimore, Md.—Robt. Simpson.

Fifty Killarney. Prize a silver tray, value $25, offered by Henry F. Michell

Special cash prize of $10 in gold offered by E. C. Ludwig, Allegheny, Pa., for 36 Killarney.—Fred Burki.

NOVELTY.

White Killarney, exhibited by the Waban Rose Conservatories, scored 87 points.

Miscellaneous Exhibits.

F. R. Pierson Co., Tarrytown, N. Y., light and dark pink sports of Winsor carnations, a Prosperity colored sport of White Lawson, crimson seedling No. 60 and large pink, serrated flower, with tremendous stem (No. 50).

W. A. Manda, South Orange, N. J., South Orange Beauty, Cherokee and other roses, also Pink Pearl carnation.

Chas. Sandiford, gardener to J. J. Albright, Buffalo, N. Y., made a large display of splendid cyclamens.

Bassett & Washburn, Chicago, made a fine exhibit of O. P. Bassett carnations.

Joseph Heacock Co., Wyncote, Pa., Dorothy Gordon carnations, a fine vase.

Baur & Smith, Indianapolis, exhibited a fine vase of Shasta carnations.

Bertermann Bros., Indianapolis, Ind., J. Whitcomb Riley carnations.

Notes.

H. A. Barnard of Low's of London, England, will not soon forget his escort to the Buffalo station enroute to Toronto, the delegation including President Poehlmann of the American Rose Society and Mayor Breitmeyer of Detroit.

The S. A. F. delegation arrived from Cincinnati Wednesday morning including J. A. Valentine, Frank Traendly, Geo. Asmus and Eugene Dailledouze.

August Poehlmann was the first officer of the society to reach the convention city, closely followed on Tuesday by Benj. Hammond.

W. F. Kasting and J. Rowland Cloudsley were on hand all the time making things easy for the visitors.

Peter Crowe is so well pleased with Rhea Reid that he will grow it much more extensively next year.

White Killarney awakened much interest and My Maryland was frequently inquired about.

Lawrence Cotter, now of Jamestown, N. Y., was warmly greeted by many old friends.

The stately dining halls of the Iroquois hotel made a fine setting for the exhibits.

Visitors.

Geo. Asmus, Chicago.

ILION, N. Y.—Hakes & Son have sold their business to Edward A. Baker, Jr., and thus one of the old pioneer families in the florist business here breaks its connection.

LEXINGTON, KY.—Lucien Leclere is very busy with Easter stock at his father's place of which he is manager. J. A. Keller is cutting fine roses and carnations.

SPARTA, WIS.—The greenhouse of Z. K. Jewett & Co. was burned March 9 and Alvin Clemons, aged 25, was burned to death there. It is believed that the boilers burst and started the fire. The loss is estimated at $5,000.

The Rose Garden.

BY J. F. HUSS, HARTFORD, CONN.

It may be a very unusual moment to write, when nature is in winter garb, about the rose garden; still the very name is enough for the lover, to stimulate his thoughts which bring back everything so highly interesting in the rose garden. Everyone may not care to have a garden of roses exclusively, but who among lovers of flowers would not like to have in his own garden the scene of three years ago that the rose committee witnessed here, on our place, which for private uses may be taken as a model.

But we cannot leave the rose with this notice. Grand as are the masses of roses we have occasionally met with, we have never yet seen anything even approaching our conception of the scenes of grandeur and beauty that might be worked out by the massing of the modern varieties of roses. A rose garden is now almost indispensable, either as a part, or as an adjunct, to every large and comprehensive garden. If in the original plan of a garden it cannot be conveniently worked in with the general arrangement of floral gardens, then a separate piece of ground is set aside for the purpose. This I have often seen, and always found it a most interesting spot. But apart from the immediate question, whether there is a separate rose garden or not, roses should be found plentifully in every general garden, on account of the varied forms they are capable of assuming, either naturally or by training. They are seldom out of place anywhere. What with dwarf standards and climbers, there exists ample material to adorn the most select position, or to obliterate the most awkward spots, bringing them into harmony with the general design. But what should the form of a rose garden be? I will give my ideas as briefly as possible.

FORM OF THE ROSE GARDEN.

It should be formed, if possible, on level ground, with as many beds as the space selected will allow. Such beds should be four feet wide, planted with three or four rows of plants, two feet apart, and a grass border three or four feet between beds will enable anyone to reach each plant to cut the roses without stepping into the bed. Such grass borders are very easily kept, mowing once a week with the lawn mower. At the same time this grass walk sets off the flowers to great advantage. With some 15 or 20 beds, with a double amount of well selected, best flowering varieties, say 40 plants in each bed, it will well make a very attractive collection. These beds may be in the form of a square or oblong. The rose garden can be made very attractive and artistic. All depends upon the gardener who has charge of such estates, or upon the landscape gardeners who have to make designs for a small bed or a regular rose garden. The rose garden should be surrounded with a border, of three feet, which should enclose it, of hybrid teas, a few fine standards or French briars, or of (laxa)? stock, which are the two most flexible stems for the layering in the fall. A very light wire fence with a ¾-inch iron post, with two or three wires one foot or 18 inches apart, and planted with Crimson Rambler will have an excellent appearance from the distance.

PERGOLAS.

A still further imposing scene can be obtained by forming a pergola, which can be easily constructed with ¾-inch gas pipe driven into an 18-inch cedar or locust post, eight feet high with a cross bar on the top from one post to the other, with a grass walk in between, as many of our rose members will remember having seen at our place, which was pronounced by all as a veritable paradise of roses. Such a pergola or arch should be planted with as many varieties as there are posts, or not more than two to a post, as with our advanced progress in hybridization of so many valuable climbing roses, the choice is at everyone's command, and gorgeous effects can be obtained of most bewildering beauty of plants that bring forth their blossoms at the same periods, of hybrid perpetuals, teas or hybrid teas. Again a rose garden may be laid out on a terrace, as ours is located. There may be a bank sodded or sown with grass seed. But such a bank should be in full harmony with the rest of the rose garden and should be planted with trailing roses and pinned down, making it a bed of roses. It will add greatly to the rose garden. Good taste and art should be exemplified in every detail of a rose garden. We have also a great many dwarf roses, like Baby Rambler and the midget roses that are used to form borders, especially around hybrid perpetual beds, to hide the bare ground. They are very attractive, and the result is one that will meet with the approval of every lover of rose gardens. Such sights cannot easily be forgotten.

SOIL AND MANURE.

Almost any soil will grow roses, as we see them in yards or gardens, providing a proper selection of varieties is made, and attention is given to the application of suitable manure. Roses, of course, enjoy a rich soil, but to keep adding manure to a naturally rich soil is not as beneficial as a change to chemicals such as nitrate of soda. This subject is therefore more a question of judicious manuring than selection. The golden rule is to add what the ground is most deficient in, and never to apply close, moisture-retaining manure to a soil that is naturally stiff and moist. A very dry and sandy compost may easily be made suitable, by adding a few loads of stiff fibrous loam and clay, also by manuring with fairly well rotted cow manure; while, in many cases, by adopting the opposite plan, a stiff, poor soil may be worked into equally good condition. The ideal material is fairly stiff, not too wet, and not less than three feet in depth, with a good drainage, so that after heavy showers the roots are not left in water. Such well prepared rose beds can be enriched at will. Roses will thrive perfectly well for at least eight to ten years. After that time, if still in good condition, they should be gradually transplanted in late fall, the plants well pruned out, suckers cleaned out, and the soil deeply trenched and mixed with good rotted manure, and the roses replanted, when they will thrive anew and will last for many years. But we should never lose sight of the newer varieties of roses, and supplant such older varieties as have lost their usefulness. A wide-awake gardener or lover of roses will naturally keep up with the times.

PRUNING.

Pruning about the New England states cannot be very well done before April 1, as the uncovering of the winter protection is usually begun by that date. This has been my experience. The pruning of every class of rose is a very vital operation. All useless wood should be carefully cut out and only retain the good strong canes, and hybrid perpetuals and hybrid teas are pruned alike, say one foot from the ground. You can easily retain the same height from year to year, as they should always, every year, be renewed with new canes and the old ones cut out. As to climbing roses the pruning is very different, as we keep five or six long canes around each of the posts of the arch, and keep these young ones as long as they cover the intended arch, or

ROSE KILLARNEY.

pergola, as it may be called. The old wood is cut out, but sometimes we have not enough to cause the desired effect, and a few of last year's growth are retained, and the side shoots are cut back to two or three eyes. The canes are very carefully tied up with fine willows, as the European well trained gardener uses, or with any other material as is commonly used, in such a clean way, where the strong winds will not move them from their holdings. The same operation is used to decorate a wire fence. As for the trailing roses, they are pinned down so as to cover well the bank with the low canes, and the top shoots are cut back to two or three eyes. The pruning done, the soil is at once loosened up carefully with a spade fork.

MOISTURE FOR ROSES.

One thing should not be lost sight of, and that is, to have water close and conveniently at hand. As soon as the plants begin to bring up the growth of leaves, they need to be syringed nearly every day, to keep red spider, aphis, etc., away in the dry season. This method has been followed with great success for many years. And when later the rose bug or chafer appears, slugshot is used with splendid effect, and, having the water on hand, can easily be cleaned off long before the lady of the house or the gentleman wishes to visit the roses. There is nothing more inviting than to see a clean, well kept rose garden with clean leaves and perfect flowers, but careful watchfulness has to be kept constantly over it. At the beginning or middle of June a good mulching with short stable manure of two or three inches thick, is good, as roses like a cool footing, and this is extremely beneficial, preventing the soil cracking or drying out. It is also the means of retaining good foliage and better perfection of roses. When the flowers make their appearance great care should be taken of the common enemy, the rose bug, which is a very troublesome one in most localities and the insects must be picked up regularly. The withered flowers must also be carefully picked up, and no petals left on the ground. This is a strict rule about well kept rose gardens. A watchful eye should be always kept on budded roses, as they often throw up suckers, which must be at once removed, or mischief will be the result. I once saw at Lenox, a fine rose bed, that was neglected for two years, and on the third year there was nothing left but suckers, which had outgrown all the roses. At the beginning of August the plants will have thrown root canes from three to five feet high. These should be cut back to three feet. This simple light pruning will strengthen the canes for the following flowering season.

WINTER PROTECTION.

Winter protection, in this cold heartless latitude, plays a very important part. One who comes from south of New York would not think of protecting roses, as experience has taught us, all over the New England states, except where near salt water. At the end of November or December, or in fact as soon as we have heavy frost, but before such frosts arrive, standard roses are detached from their stalks and the crown is bent down, a hole in the ground made and the crown laid in it and partly covered up with soil, with two cross sticks to hold them down. All ramblers are laid down in the same manner. Hybrid teas and hybrid perpetuals are bent half down, tied over each other, and, as soon as heavy frost is in sight, all the rose garden is covered with a light layer of leaves, and long straw manure or bad hay, covering the beds of climbing roses as well. One year we did not cover our ramblers, and in the spring they were all frozen to the very bottom.

Why Small Growers Fail With Roses.

BY WALTER W. COLES.

In visiting floral establishments we find that not over 20 per cent of the small retail growers make a success of roses. In fact, by far the larger number do not get enough out of their rose space to pay for the fuel. I refer only to those who grow roses, carnations, and a general assortment of flowers and plants in a limited area. There are quite a number with but 10,000 to 25,000 feet of glass, who make a specialty of roses and whose stock is a credit to many of the larger growers. But this note is for the small, all around grower.

The first handicap is a lack of suitable conditions. Carnations, bedding plants and a general line of stock are grown in the same house, in the same temperature, with success, varying from fair to good. Then roses are attempted. Under such conditions they cannot be kept at the proper temperature without hurting the other stock. They cannot be properly syringed on account of soaking other stock close by, and red spider gets a hold. Doors left open cause a draught and start mildew. On account of spoiling tender stock in the house, fumigating is put off and aphis gets a hold. Shading is put on for other stock and roses suffer under their part of it. Under such conditions it is practically useless to try to grow roses. If a separate house can be devoted to roses the above conditions can be eliminated. But even then there are usually many difficulties.

A night fireman is seldom kept and while the temperature may be kept right in the daytime it is allowed to fall at night. Then the grower usually has so many other duties that the houses are neglected. Added to this is a lack of knowledge of rose growing. The grower knows that he should plant early in June but it is put off on account of the press of other work. On such places the grower usually puts in a batch of cuttings, roses, carnations, geraniums, etc., in January or February. When rooted they are usually potted and grown in the same house with a miscellaneous lot of plants. The result is usually a weak lot of plants covered with red spider and mildew. The result is, in September or October, when the plants should be strong and healthy they are weak. To make matters worse a few roses are needed during the summer for funeral work and the life is cut out of the plants to save (as the grower thinks) expenses. A few roses are usually cut in October and November at a time when they can be bought from $2 to $4 per 100, but from December 1 to April 1 when roses are wanted and usually scarce, the plants are standing still and do not return enough to pay for the fuel it takes to keep them alive.

THE REMEDY.

In the first place the small grower or retail florist who uses but an average of 75 to 100 roses per week should not try to grow his own cut roses. He would make more money by buying them from some good grower, but those who feel that they must or will grow their stock should plant nothing but strong, healthy, clean plants. If they cannot be grown, buy them and plant them in good rich, new, mellow soil, some time during June. If the house is shaded, even if only slightly, see that it is removed.

Repair all broken glass and as soon as any is broken or blown out replace it at once. From July 1 to September 1 give the plants plenty of air and water at all times. There are more roses ruined during the summer for want of water and air than from any other cause. It is money well spent to hire sufficient help in June to plant roses, as one month in June and July for roses planted on a bench is worth three times as much as in October and November. Keep the buds pinched off until the plants are strong and healthy and breaking freely, and at this point a top dressing of cow manure will be beneficial. Never allow the temperature to fall below 56° at any time.

Do not grow too many varieties. For the small grower or beginner we recommend but three kinds: Bride, Bridesmaid and Richmond. Don't try American Beauty; let the specialists attend to this kind. If roses must be grown in a small way give them as many of the advantages that they receive on larger places as possible. Acquire as much knowledge as can be gained from reading and practical experience and then see how large a per cent of this knowledge can be put into practice.

THE ROSE.

Rose Kaiserin Augusta Victoria.

This rose is especially used for summer. It should be propagated in the fall when the wood is in its best condition; October or November is about the best time. These cuttings should then be potted up in December or early in January, and by growing them along slowly repotting into larger sizes in the spring when they should be planted out in the field similar to carnations.

They should be carefully cultivated and pinched back occasionally in order to make strong, bushy plants. Then along in fall after the first frost has driven the sap back in the ground the plants should be potted into 4-inch pots and placed in a cold cellar. We then take the plants up and heel them in until about March 1, when they can be planted in the bench. By giving the young plants this treatment, they are in fine condition to be forced and will produce extra strong plants. If the plants are grown through until early in December when they should be dried off and the temperature allowed to drop slowly below freezing, driving the sap back into the roots, they can then be rested until about March 1, when it is better to cut them back and start them up again.

The second year Kaiserin will produce better and longer stemmed flowers than the first year, and after about three years in the greenhouse, we have found it advisable to throw them out and replant, as by that time the wood gets so large and tough that they do not produce as well as younger stock. We have heard of some growers who dig up the plants December 1 and heel them in, replanting them in the benches about March 1, but have never tried this plan ourselves. We doubt if Kaiserin will pay as well to grow as other roses in the same house, provided the house is a first class rose house. If the houses are not suitable for forcing flowers during the winter we should of course use them for the summer stock.

The planting of Kaiserin out in the field the first summer may appear a waste of time, but experience has proven that the plants treated in this manner gain strength and vitality and will pay well the extra trouble of transplanting, cultivating, etc., by the extra strong flower shoots the plants throw up. Kaiserin is no good as a winter bloomer. It is a loss of time and money to force the plants at that time as the results are very poor.

C. L. WASHBURN.

About Bull-Head Roses.

I am not a rose grower, and do not propose to give any directions for growing deformed flowers, because most rose growers are blessed with as many bull-heads as they are willing to own up to; and it may not be out of the way to say that, when they have all perfect flowers, the fact may be attributed to bull-head luck. I think it is fair to say that poor crops are usually due to an insufficient development of the head on the grower's shoulders, be it a bull, or otherwise.

I visited a beautiful plant of rose houses a short time ago, where the cuttings of American Beauty, Perle and some other varieties have been highly satisfactory and profitable, so much so, that the respective manager's hat-band became a trifle strained—an excusable phenomenon under such conditions.

On entering the houses, I found them beautifully clean and well-kept according to modern usages. There was not a bull-head in sight, but I noticed some conditions which suggested them, and asking the foreman, he admitted having quite a number of late. Now, I always find these same conditions exist where bull-heads develop, and therefore suggest that they are at least a dominant factor in their cause. One of the symptoms is the development of green moss on the surface of the soil. Moss of this general character is found in places where a shallow footing is required; although the soil may be deep this moss does not penetrate. It grows on shingled roofs, on the north side of trees, and shady places wherever the substance beneath is not well aerated, that is to say, it is not dependent upon vapor rising through the soil. The moisture for moss seems to be fed from the top and is not sucked up from the lower ground. We never find roses growing wild where we find the mosses, or, we don't find the mosses surrounding wild roses.

I notice that rose-growers look upon the moss as being harmful, and rake it loose to throw it away. This is "love's labor lost." The moss, in itself, is not harmful. You may carry moss to a clump of wild roses daily, where it will wither and decay, adding some fertility to the soil. It is the conditions which produce the moss, that are detrimental to the rose. If the moss is made to perish by simply changing environmental effects to suit the rose the problem will be solved. Roses and moss cannot thrive under like influences; as well keep throwing out ice as it crystallizes on water, to prevent plants from freezing; you cannot raise the temperature by so doing.

The moss indicates an atmosphere well laden with moisture most of the time. The foliage of the rose, in normal condition, has a glossy, metallic surface, indicating its preference to keep dry, but to endure water occasionally without becoming wet; but too much of it, as it does with a gossamer coat, will penetrate and disarrange some of the elements essential in the plant's development. Black spot usually shows itself just in time to get the blame, whereas it is merely a consequential result of preceding conditions. Don't brand this black spot as an enemy, but as Nature's unmistakable sign of improper care. Proper treatment of the rose renders it immune to all forms of disintegration, which we call diseases.

Physicians are today working a large amount of high-priced graft on the public for fighting tuberculosis, but few people are, however, laboring to remove its cause. Now, the rose, like any bush or tree, is so constituted as to require its assimilation of the 10 chemicals (with the exception of carbon) at the roots, no matter how bountiful a supply there may be on the bench. Their tiny rootlets are dependent on humus for the dissolution of the chemicals, and vapor rising from the soil just below them. Neither of these can operate without air. Water can be endured during its absorption by the sub-soil from above during rain, or spraying; its utility is in the nature of a reservoir beneath the plant, to supply the vapor from below, so delicately as not to exclude the air.

When the top soil is saturated the air is excluded, and normal growth is temporarily arrested; therefore, the less it is done the better. But there are steam pipes below these benches, which force the water out much more rapidly than the roots are able to take it, therefore, normal conditions never exist but temporarily. Sometimes the working roots near the bottom of these benches become so dry that they perish, and the plant balance of root and foliage becomes unequal. This is a condition which renders the foliage susceptible to some form of deterioration, and remains so for several days until new root buds develop. This is the reason why roses frequently start well, and flourish during the first six months after being benched; excessive feeding of manure is usually no remedy.

I noticed the ground floor of the houses very dry; what was an open field a year ago is now dried to a crisp, and cracks three or four inches wide gasping for moisture. Dead soil (dried) and dead water (boiled), do not exist under environments favorable for roses. Mother Earth is the best regulator of humidity we know of. Her function is to absorb the moisture from the atmosphere when there is an excess, and to give it out when there is deficit, the temperature being a governing factor.

I suggest that if the ground be kept moist enough to maintain a covering of tradescantia, the requisite humidity would be maintained without such frequent drenching of the surface soil on the benches; this should be almost dry most of the time. The assurance of good management will be the non-appearance of moss. Another factor of vital importance is light; the assimilation of carbon from atmosphere by the foliage is as necessary as root action. An unbalanced ratio between the two means trouble for the rose. The function of the green parts in absorption of charcoal and liberation of pure oxygen is dependent on sunlight. While you cannot regulate the sun you can measure the amount of foliage surface to equal the square of your rose house. I don't know that any rule of measurement has ever been adopted, but I would consider the usual spacing of plant about right up to December 1, but thinning out should begin whenever the maximum of foliage is obtained.

ROSE RICHMOND.

THE CARNATION.

Carnation Mary Tolman.

We show herewith the new carnation, Mary Tolman, originated by A. E. Hunt & Co., of Evanston, Ill., and now being grown by the same firm and also Hunt Bros., of Park Ridge, Ill. In color it is a salmon pink, of somewhat warmer tone than Enchantress, closely approaching the shade of the old La France rose at this season of the year. The blooms are large, some being fully four inches in diameter with very well filled centers. Mid-July is the best time for planting for long season cutting. It produces freely and is an early and continuous bloomer. With its other claims for recognition it is said to be an excellent shipper. There are now about 2,000 plants of this carnation in the Park Ridge establishment, and propagation is now going forward in expectation of a very heavy demand for cuttings next season. The plants are showing up to excellent advantage, the flowers all being carried on stems erect and free, but still not so wiry as to be ungraceful. The Chicago Carnation Co., of Joliet, will aid in the dissemination of this seedling next season. This latter firm will also grow it extensively.

CARNATION MARY TOLMAN.

Salmon Pink Seedling Originated by A. E. Hunt, Evanston, Ill.

Carnations in Vermont.

ED. AMERICAN FLORIST:—

In this northern climate we put out carnation plants the first week in June and, if any flowers are wanted in fall or early winter, we bench the same again about the last of July. Would they not do equally as well if they were not put in field, providing a house could be well ventilated? S. J.

The method of growing carnation plants indoors all summer versus planting out in the field for a short period has been thoroughly thrashed out through the columns of the AMERICAN FLORIST both methods having its advocates, and it seems that given proper care in each case the whole thing has simmered down to the close application of the various little details in caring for the plant's requirements under each method of culture. This season we are growing upwards of 30,000 carnation plants indoors entirely, consisting of Enchantress, Rose Pink Enchantress, White Enchantress, White Perfection, Beacon, Winsor and Mrs. T. W. Lawson. We have never had or ever seen plants in better condition than these are. They are in perfect health regarding bacteria and not a sign of red spider can be found anywhere. They have been doing extra well all winter most of the Beacon showing signs of where 16 or more flowers have been cut. Besides this every possible cutting that could be secured has been taken without distressing the plants or causing the flowers to burst their calyces.

These plants were propagated from indoor grown plants, potted into 2¼-inch pots as soon as rooted and the latter part of April planted into benches containing about three inches of soil, almost virgin, the only manure used being a little placed on the bottom of the benches to prevent the soil from falling through. The young plants were set from three to four inches apart each way and well watered in at planting time after which they were watered only as they needed it to prevent wilting. The temperature was kept as low as possible during May and June with plenty of air on at all times, close attention being given to the work of keeping the shoots pinched back. Planting into their permanent quarters commenced June 27, the final planting being finished by August 1. We have found that the most important feature connected with indoor summer culture is to get the plants into their permanent quarters as soon after July 1 as possible. After this date the plants begin to suffer whether planted close on the bench or held in 4-inch pots as is sometimes practiced. At planting time a light shade is thrown on the glass with a syringe, enough only to break the strong glare of the sun.

Particular attention must be given indoor plants as regards topping back of the shoots. As quickly as each growth is large enough to be able to make a clear cut it should be pinched back. Ample ventilation must be provided; it is best to get this from the top of the house in the usual way. When we first started to grow carnation plants indoors all summer, we practiced leaving the doors and side ventilators open at all times causing a strong current of air through the houses. Our experience of the last two seasons has taught us that this way is not conducive to the plants' health it having a tendency to a fierce drying out together with an abundance of red spider. Our experience has been that with indoor summer culture of the carnation it is possible to get as fine a flower with longer stem. They commence to produce earlier in the fall, the blooms coming continuously from September to the next July without any off crops unless the plants be robbed of shoots for cuttings; the plants will not be as large as field plants but they can be planted closer together on the benches. There is one drawback and that is when a supply of cut blooms throughout July and August are needed for retail trade it is considerable of a sacrifice to throw out the old plants to take care of the new.

C. W. JOHNSON.

Benches for Carnations.

ED. AMERICAN FLORIST:—

I have a house used for growing carnations, with two side benches and a middle bench, the two sides being piped (hot water) but none in center. In the center of the house there is a good chance to make a solid bed; of course that would throw plants further away from glass but would that have the effect of drawing plants too much? What I should like to know is, would I get any better results from the solid bed than from benches? These are at present raised and four inches deep.

S. J.

We cannot advise solid beds against benches for the best results in carnation growing. In the midwinter months carnation plants growing in solid beds will stand still in spite of every encouragement; there seems to be a coldness of the soil at the roots that is impossible to overcome, but during late spring and in the summer the plants in the solid beds will do better than those on the benches. For best results throughout the entire season stick to the bench system.

C. W. JOHNSON.

Carnations for British Columbia.

ED. AMERICAN FLORIST:—

What are the best carnations for cutting in summer and fall for British Columbia? We have no killing frosts until the middle of October and roses and carnations do not winter kill when unprotected.

E. R.

Nearly all the standard varieties of carnations do well outdoors in the climate of British Columbia, but for preference use the Enchantress type. We would select Enchantress, Rose Pink Enchantress, White Enchantress with the variety Beacon for red. The Lawson types are very free bloomers for the same purpose but they do not throw the length

of stem and the stems come more heavily laden with buds in comparison with the Enchantress varieties, consequently they are not as desirable. Also the Lawson varieties are very much more susceptible to thrips, thus spoiling their petalage.

C. W. JOHNSON.

THE RETAIL TRADE

BE sure and keep our floral design supplements between stiff folders. This will make an elegant sales book for counter trade.

"MOVING the yellow to make room for the green" was one of the cards used in Palmer's window, Buffalo, N. Y., the day before St. Patrick's day, the window being well stocked with choice daffodils.

Dealing With Street Fakirs.

A New York lady, having given a violet peddler a $10 bill for a bunch of violets, had his tray pushed into her hands and was told to "just wait here while I get change." The spectacle of a pretty and richly dressed lady selling violets on the street was attractive to the passers-by but embarrassing to the lady until she was relieved of the tray by a man who noticed her predicament. The moral is twofold and obvious.

Gates Ajar.

SEE SUPPLEMENT WITH THIS ISSUE.

When properly carried out this makes a very beautiful design and at the same time one that is very easily spoiled. The design here shown was made when roses were very scarce and high, so we did our best with lilies and carnations. The gates ajar should never be made for less than $15, and from that up. A short time ago, at a funeral of a prominent lawyer, I saw this design, the base of which was made of ivy, the posts and arch solid of Marie Louise violets, while the gates, which were of the newer style, simply had sprays of lily of the valley pinned on them. In the base was a cluster of cattleyas, violets and Adiantum Farleyense, and for richness this had anything we ever saw beaten.

Another beautiful combination for this design would be a base of green, the posts and arch of Bride roses and adiantum loosely arranged, with gates of violets, completing the base with a cluster of Bride roses and violets. The great error which is so common with many, that of conglomeration, spoils many a fine design, and workers should try to avoid this and give character to their designs.

S.

March Flowers in the Chicago Stores.

Taken as a whole the cut flower situation in Chicago is satisfactory. There are plenty of flowers in considerable variety and the quality is good generally. Carnations were plentiful a week ago but towards the end of the week and early in the present week they were decidedly on the short side. This may be accounted for, in the case of white, by the demand for St. Patrick's day for dyeing. There seems to be no reason for the yellow dyed flowers that have appeared of late. They are not beautiful by any means, nor are they necessary with the large number of yellow daffodils that are in the market. These are far prettier, last better and are in every way superior to the unnatural, yellow dyed carnations. St. Patrick's day forms some reason for the green dyed flowers, whether they are in good taste or not, but yellow carnations, unless they are natural, seem to have no excuse for their being.

IRISH HARP WINDOW DECORATION FOR ST. PATRICK'S DAY.
By the Bohannon Floral Co., Chicago.

Roses, with the exception of American Beauty, are plentiful and good. Killarney has been uniformly good for so long that it seems hardly necessary to say it is a leader and is, in a manner, taking the place of Bridesmaid. But there are some good Bridesmaid to be had, also Bride, and we have recently also noted some of the old but beautiful Bon Silene a small flowering variety not sufficiently grown, for choice and artistic work. Gardenias are becoming increasingly important as a cut flower. There is quite a gardenia revival in fact and the better class of customer who is able to spend a dollar or two on a corsage bouquet will not buy violets when the fakir is ticketing them up at 15 cents per bunch. Here the gardenia and the orchid come in and both are now fairly plentiful. Cattleya Schroederæ and C. Trianæ are in good shape and the showy Dendrobium Wardianum is also freely shown. Lilies are fairly good but not plentiful, and doubtless the manipulation of the plants for Easter has something to do with their scarcity now.

Sweet peas mark a bright spot. They are excellent now for so late (or early) in the season. The improvement in the varieties of this useful annual has made great advances and it is among the choicest and best of the smaller flowers now showing. Southern daffodils are in and are decidedly good. At the end of the week they were making $5 per 1,000 and one commission man handled 50,000 in one day. Callas, lily of the valley, freesias and wallflowers are still in sufficient supply and are good in their several ways. Plants are plentiful, perhaps the finest offerings now being some grand rhododendrons though cyclamens, azaleas and Primula obconica and P. Sinensis are all good.

Trade in Differing Degrees.

SWELL, COMMON AND DUMP.

The signs of the times tend towards class consciousness. In a metropolitan town the tradesman of ability works up a high-toned trade and to maintain his position he must cater to a certain class and to keep up the individuality of his establishment, must hold on to a certain clientele and let the hoi-poloi go to those who have other grades of trade. In a one-florist town no class distinction is made from the exigencies of the trade situation and all whose taste for flowers is cultivated elbow each other at the same florist counter. But in a big town

from the swell florist to the street fakir is a far cry and the whole tribe is in the business to gain a livelihood.

When one or more florists in a town have captured the swell trade and show capacity to hold on to the same, it is folly for mediocre florists to attack the swell ramparts and these had better confine their activities to catering to the common trade. They haven't the higher ability to serve a class whose esthetic tastes are highly developed. Better elevate the taste in their own stratum and when conditions are favorable climb in a higher position—in fact ascend to a higher business and social plane.

If the florist has in mind a distinctive aim he must shoot straight and not fire random shots and his firing have no effect. He mustn't put billboard signs in his window, reading, "Violets, 10c a bunch." Leave such faking to the back streets and street fakirs. If the mercantile product is not sold out entirely at a price which is essential to keep up the tone of the trade, do not introduce any bargain fakes, but consign the unsold stock quickly to the dump. The florist must be alive to observing his trade conditions and adjust his supply to demands. If conditions are in equilibrium, matters will be so adjusted that the machinery of exchange will be well oiled and run smoothly and florists will not be up to the glut problem.

MICHAEL SULLIVAN.

Heliconia Edwardus Rex.

Heliconia Edwardus Rex is a fine foliage plant exhibited for the first time at Philadelphia during the fall of 1907 by John McCleary, gardener to Mrs. Weightman (Walker) Penfield, Raven Hill, Germantown, and it attracted considerable attention and favorable comment. It reminds us at first glance of the older variety, H. illustris rubicaulis, but the leaves in the newer variety are much darker in color, more crimson, and broader. It is a decided acquisition among stove plants on account of the distinctive coloring, which is not any too plentiful in this genus. In its manner of growth it resembles the canna, but botanically it is more nearly allied to the banana. At one time we had hoped to be able to use heliconias satisfactorily outdoors in summer, but when we tried H. aureo striata it was not at all a success. Possibly some of your readers have tried some of them for tropical bedding purposes, and, if so, and they have been successful, an account of their experiences would prove interesting.

E. L.

NEWPORT, R. I.—Stewart Ritchie will open a retail flower store at 40 Broadway.

MILWAUKEE, WIS.—A committee consisting of H. V. Hunkel, C. C. Pollworth, Wm. Zimmerman, Aug. F. Kellner and C. Dallwig met March 7 to make preliminary plans for a chrysanthemum show in November.

ALBANY, N. Y.—At the regular monthly meeting of the Florists' Club held March 11, Fred A. Danker was named chairman of the flower show committee. The club proposes to hold an exhibition of plants and flowers in some hall in the city in November. It is proposed to divide the proceeds among several charitable institutions in the city. Chairman Danker has power to name four sub-committees.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Asters.

Never allow the young seedlings to remain crowded in the seed beds or flats but, if the benches are not ready for them, prick them out at half distance or even closer and later on thin them to the proper distance on the benches. Where the asters are to follow violets, the latter may be allowed to go on and flower and in the meantime the young aster plants will be thickening out and gaining strength. Good plants put out at any time during the present month will be in flower in June. Avoid overwatering in the early stages while the plants are small and, when they begin to take with a will to the soil, keep the surface well stirred to admit air and allow of easy watering.

Heliconia Edwardus Rex.

Iceland Poppies.

The Iceland poppy (Papaver nudicaule) stands much better as a cut flower than almost any other species in the genus and the colors of the different varieties are bright and telling. Besides this the flowers, on the slender stems, are very graceful and they are produced over a long season. The easiest way to get plants quickly is to sow thinly now in pans or flats and when the little plants are about half an inch high and showing the rough leaf lift out little clumps of about half an inch across. These will contain several plants, of course, and if planted out on a bench to thicken out and strengthen will be nice stock for outdoor planting in May or June. A sunny, warm position is necessary and the soil should be well cultivated rather than over rich. The plants will make rapid progress and the only attention needed is to shade as the flowers are produced to keep their color.

Left Over Narcissi.

The grower of narcissi under glass for cutting usually throws his bulbs away after flowering, but where they have only been gently forced the bulbs are useful for planting outdoors for cutting, that is, provided there is a suitable soil for the purpose. Very often such bulbs—and, of course, bulbs bought specially for the purpose—produce useful gatherings of flowers after the southern bulb stock is over. Where they are to be saved let the flats containing the bulbs be placed in a cool house under the benches or in frames or elsewhere where the room is not valuable, to finish their growth naturally. Then when the growth is finished let the bulbs be dried off and kept in a cool, dry store until needed for planting in August or September. Especially will they be useful for retailers who handle their own produce.

Physostegia Virginiana.

The beautiful flowers and ample growths made by this native plant in low lying, moist positions on stream banks or in similar positions show the grower the kind of treatment necessary to get the best results and if, in addition to such a suitable soil, the plants are frequently propagated by division and set going on their own account much finer spikes with longer racemes of flower will be produced. There is already a considerable demand for this excellent perennial and those who need a lasting, showy, yet refined-looking flower for July and August should grow it. Roots may be obtained from dealers in hardy plants and set out now at any time. They will flower freely this season and go on improving and increasing annually. As hinted above, it is better to divide regularly every year or two where fine spikes for cutting are needed though old, well-established clumps are fine in the border in prominent positions. It is also known to the trade as Texas heath, though this name is misleading, as it is very far removed from this family. The flowers are varied in their tints of rose, purple, mauve, lilac and, occasionally, white.

Packing and Shipping Flowers.

Many of the complaints heard of the poor condition of stock on arrival at the market or retailers' stores are entirely the fault of the packing at the greenhouses. Flowers of any kind, to travel well, must be so firmly placed that they cannot rock about in the boxes; they must be cut and in water at least 12 hours before being started on their journey and when packed must be protected from heat or cold, according to the time of year. Respecting the use of ice in summer this if often over-done and frequently well soaked paper would meet the case. The water from the melted ice is often the cause of soiling such choice flowers as Easter lilies and the chunks of ice get loose and damage the flowers. There are, of course, times when ice must be used; long distance shipments in summer would be impossible without it. But it is surprising how

well carnations and roses will carry with nothing but wet paper around them and a little oiled paper to protect them. The papers must, however, be thoroughly soaked, they should be thrown into a tank of cold water and left there for several days so they get thoroughly saturated and will hold the moisture for quite a long time. A handle on small shipping boxes that falls flat and takes practically no room and does not prevent the boxes fitting closely together, sometimes prevents their being turned over and thrown about. Where the flowers have their heads all one way this handle should be placed a few inches from the center and nearest the heads of the flowers; then when the boxes are picked up by the handle the stems will be down and any shaking will tend to bring the stems rather than the heads to the end of the box. While not leaving it so close as to make hurried packing necessary the flowers should remain in water in the cellar or cool room until the last minute, simply allowing time for proper packing and meeting the train or other conveyance by which they are to travel. Good stock is necessary, but the best efforts of the most clever grower may easily be rendered null by improper packing and want of method in shipping.

Sweet Peas.

The benches now devoted to sweet peas in full flower must be kept moist to maintain the vines in good condition and provide for the flowers. The soil must be kept loose on the surface and not allowed to cake up or dry out too much. If a little dry soil is kept on the surface it forms a good index to the condition of the soil beneath as to moisture and it also prevents the loss of moisture and ensures abundance of air reaching the roots. Unless the plants can be kept in cultivation the flowers will be poor and small, but when the roots are in good shape feeding can be indulged in and this will help the size and substance of the flowers. Younger plants in the benches, those that are now advancing for flower, must, on the other hand, be very judiciously watered. Nothing is so apt to cause the flower buds to drop wholesale as heavy watering before the plants are in a condition to use the moisture. Continue to tie or otherwise support the plants so they do not fall about, this leading to the vines failing or at least to the flower stems coming crooked. Large old plants that are getting up close to the roof in low houses should have the strings cut and lengthened so they may be slanted a little and thus kept away from the glass. There is still time to plant out young seedlings for a later supply of flowers and, with the increasing light, the growth will be freer and the flowers finer than an earlier lot. In preparing the benches or solid beds a rich soil is not necessary—just a good holding loam with a little well rotted manure. When old bench soil is used mix a little new fibry loam with it to give it texture as the roots will do better in it than in finely divided soil such as that which has grown a crop of roses or chrysanthemums.

BROOKLYN, N. Y.—Andrew Leis and a woman by the name of Thomas were found fatally shot in a New York hotel March 3, Leis' revolver being found on him.

CHRYSANTHEMUMS

The Leaf Tyer.

As the sun returns and the house begins to warm up through the day, Phlyctaenia ferrugalis, commonly known as leaf tyre or leaf roller, increases in activity and a few lines at this time are opportune. These common names are applied owing to its habit of drawing two leaves together or rolling the edges under by means of a fine silky web. It is only injurious to the plants in the larval or, as most florists would say, worm state. When in this form it feeds upon the leaves, usually from the under side, leaving the epidermis or skin like upper surface and when food is scarce they sometimes devour the whole leaf with the exception of the mid-ribs or veins.

The Chrysanthemum Leaf Tyer Natural Size.

A few of the insects would not have a very serious effect, but as they soon pass from the laval state to that of the moth or miller and then are actively engaged in depositing eggs, their numbers are rapidly increased. The accompanying illustration shows the various stages of development. For the first few days the larva is smaller than the one shown at the extreme left, and as it feeds and attains full growth, usually seeks a sheltered place like a dead leaf near the ground, where it draws the edge of the leaf over so as to envelop itself. Here in the course of a few days it passes into the chrysalis or pupa state (the center figure) and is then dormant until it is again transformed into the moth. They do not restrict themselves to chrysanthemums and are often found on roses, coleuses and various bedding plants. Some 12 years ago they were first noticed on our place; we did not give them any great consideration and, to our sorrow, were soon confronted with a serious problem. They became so plentiful that thousands of moths would rise when watering, and the larvæ were so numerous as to devour the entire foliage of whole houses of stock plants.

As far as we know there is no remedy that eradicates the whole colony. We have been able to keep them under control by killing the moths as fast as they appear. This requires several persons to follow the hose at watering time when they fly to the glass. We use a newspaper folded to about the same form as would conveniently go in an overcoat pocket. They are rather fragile and are easily disposed of with a sharp rap. The larvæ may be destroyed by hand picking, but this is an endless task when there is a great area of stock to be inspected.

No doubt Paris green or arsenate of lead would be effective remedies if it were possible to apply such solutions to the under-side of the leaves, but we find this very difficult to do, especially with stock plants having several branches and these very near the ground. Hydrocyanic acid gas has been tested and, we understand, without success. When first hatched the moth is rather heavy in flight and can often be caught between the hand and paper, but after a few days they become very active and resort to a zigzag course when chased. Under such conditions it requires about the same dexterity as is employed in basket ball to capture them on the wing. Usually it is prudent to let them light when they are easily killed. This crusade should be continued from day to day and when it becomes necessary to water twice a day let the battle continue, for any abatement gives them a renewed foothold.

ELMER D. SMITH.

The Iris and Its Culture.

Of rhizomatous irises the bugbear class is that of the onocyclus group, generally known as cushion irises. The most familiar species is the mourning iris or I. Susiana. All have very broad petals, and among them are the most remarkable forms in coloring. Many of the flowers are most delicately veined and reticulated, generally with a darker color on a light background, and were they of easier growth they could not fail to be popular in every garden. They are from Persia, Armenia and Afghanistan and naturally require hard sun baking after their short blooming season. They can hardly be called hardy, and in any event require such special cultural attention that they cannot be recommended. The wonderfully full flowers with their peculiar markings such as shown in I. paradoxa, I. Iberica and the so-called prince of irises, I. Gatesi makes them particularly interesting and tantalizing, says J. Woodward Manning in his paper read before the Massachusetts Horticultural Society.

Closely allied to the oncocylus group is another, popularly known as the regelia section, in which the petals are narrower and the plants are hardier and considerably more easily cultivated, but of even greater importance is the fact that they hybridize freely with the oncocyclus group and the progeny are comparatively easily cultivated, increase rapidly and are of prolific blooming quality. C. G. van Tubergen, Jr., of Haarlem, Holland, has been largely responsible for this group of so-called regelio-cyclus irises, obtaining them by crossing I. Korolkowii and its varieties; I. Leichtlini, I. Sara and I. Suwarowi with various species of the oncocyclus group. Such resulting progeny as Psyche, lavender, beautifully striped with rich purple, with darker toned falls; Charon, rich coppery purple with deep purple markings, and Iphigenia, intermediate in its color range, show something of the result, while the shape of the flowers is a happy medium between the two groups. Probably this group has not been extensively cultivated in this country as yet, and we will look forward with deep interest to the results.

We now arrive at a point where it is impossible to make a distinct horticultural line between classes based on botanical classification, but by dividing the remaining classes and groups into those with and without surface rhizomes it is possible to make a form of subdivision. The surface rhizomed forms are more popularly known as German irises, though the true I. Germanica is but one of many species. The dwarf forms are greatly neglected, being but seldom seen in American gardens, yet they possess great merit, in their range of bloom and the earliness of flowering period. I. pumila is better known than the other species, and, growing about nine inches high, bears in April showy, deep purple flowers in profusion. As an edging plant it has much merit, and there are various selected varieties,

ranging from pearly white through clear blues to the deeper colored typical form. I. pumila is certainly worthy of far greater use than has been the case in the past. I. verna, another dwarf species from the Carolinas, is equally dwarf, quite prolific in bloom, with purple shades, and blooms about the same time. This does not show the improvement and fixed forms, however, that occur with the last species. The gem among dwarf irises, however, is the crested I. cristata, growing only about six inches high, with light green foliage. It forms a carpet of verdure and bears freely light blue flowers, beautifully blotched with golden yellow. I know no form of dwarf iris with so great a number of uses as this, either for naturalizing or for varied garden use.

Commonly confounded with I. pumila is a form with flowers borne singly on the stalk, with somewhat broader leaves. This is I. Chamaeiris, or its variety Olbiensis or Italica. The type bears yellow flowers with the falls veined with purple. Another small and showy dwarf species known as I. flavissima or Bloudovii, a native of Siberia, bears showy pure yellow flowers. While there are a number of other dwarf species, they have no particular horticultural merit over these. A new race, intermediate between these dwarf irises and the taller growing German iris, has appeared within a few years under the name of alpine irises, these being produced by W. J. Caparne, of Rohais, Guernsey. These are the result of crossing many of the dwarf species with taller growing kinds; the progeny vary in stature, and, it is claimed, give flowers over a period of six to nine months. Probably, however, this refers to a collection of the hybrids rather than any single variety. Undoubtedly they have much of interest, and trial will eventually prove such merit and distinction as they may possess.

For perfect hardihood, freedom of bloom and range of color we can, with the dwarf and taller growing German irises, feel quite independent of the more difficult forms. The German iris, as popularly known, varies in growth from 15 to 40 inches. The earlier varieties commence blooming in early May, and by a careful selection of kinds it is possible to keep up a succession of flowers until late June. Many species are responsible for the beauty of the class, and their crossing and selection have confused their origin. I. variegata shows its influence in the prevailing yellow color of the standards of the following varieties, with the rather remarkable exception of Innocenza, a very fine form, pure white throughout. Other popular and good named kinds are Beaconsfield, standards yellow, falls crimson, edged with primrose; Gracchus, standards yellow, falls crimson reticulated with white; Maori King, standards yellow, falls rich velvety crimson, margined with gold; Sans Souci, standards yellow, falls yellow, reticulated with crimson brown, and Regina, standards yellow, falls white, conspicuously veined with lilac and edged with primrose yellow.

Iris sambucina, crossed with I. pallida, has given us the very beautiful variety Madam Chereau, while the cross between variegata and sambucina produces I. neglecta, by a selection from which we have Clarissima, with lavender standards and falls reticulated with crimson purple on a white ground; Cythere, standards lavender blue, falls clear blue; Florence Barr, with both falls and standards bluish, with rosy lilac tinge, and Mons. de Sible, with lilac standards and deep crimson purple falls. Some beautiful forms are embraced under the doubtful species I. hybrida, all with white standards, of which Duc de Nemours, with purple edged white falls; George Thorbeck, falls rich violet purple veined with white at base; Mrs. George Darwin, falls white, the upper part veined with gold and violet, are among the best.

Florists' Problems.

Part of an address by Prof. W. S. Blair, horticulturist at Macdonald College, Que., before the Montreal Gardeners' and Florists' Club.

In Montreal and vicinity, there are about 500,000 square feet under glass devoted to commercial floriculture and vegetable forcing. In comparison, we have one acre under glass to 200 acres devoted to the same line of work in other parts of America. It is not necessary for me to state that a number of problems of great interest to florists could be worked out at considerable saving to the trade at some place erected for the purpose. So far as I know, no aid has been sought for such work in the province. Yet you have at your service without any cost, and without any effort on your part, a range of greenhouses thoroughly up-to-date in every particular, donated by Sir Wm. C. Macdonald of your city, and situated at Macdonald College, where experiments in your interests are and will be conducted. This certainly is a gift of which the florists and gardeners of this province should be proud, for, through it, we will be able to keep pace with those engaged in similar lines in other parts of America, all of whom are receiving more or less state or provincial aid.

Prof. W. S. Blair.

Horticulturist at MacDonald College, Quebec.

THE GREENHOUSES.

Our houses are well known to most of you. They comprise four 100-foot houses built in block, with glass partitions dividing each span of 21¾ feet, and these houses are again divided, giving us eight houses, each under thermostatic control. I personally planned these houses, so hesitate to say much about them. What was in mind when developing the plan was to assist those who intend making a living out of plants under glass so that they would be able to get the largest possible crop at the least possible expense, so as to be able to supply a larger number of people with such plants at the lowest possible rate. For this purpose, to conduct effective experiments, crops must be grown on a commercial scale, and marketed in a commercial way. A quantity of certain crops must be produced and placed upon the general market, and this continued for a number of years, in order to determine accurately and give reliable information. In our experiments the business end is always in view, not in assuming what we might have got, but by placing our produce on the general market and taking chances with growers in the same line. It has always seemed to me that many of our provincial and state aid experiment stations cut off their work at the business end, simply because some grower feels that to place such goods on the market would infringe on his business. The idea is entirely wrong from every standpoint, so far as I can see. Of course, it is possible to abuse such a privilege, but if honestly done, no one suffers.

BENCH ARRANGEMENT.

Considerable thought was put on the arrangement and building of benches. Possibly our experiments to determine some of the best styles of bench are not duplicated elsewhere. We have the solid side benches, 2½ feet high, in some cases filled with earth to the bench soil, in other cases with rough excavation stone, and with cinders in still other cases. Some of the benches have 2½-foot sides, with openings into 2½-inch tile, laid close together below the bench soil, and below these again there is simply soil, excavation stone or cinders. In other benches with 2½-foot sides, there are 4-inch openings in line four inches apart, and 18 inches below the top of the bench, opening into excavation rock or cinder, which fills the center of the bed. We have low benches, with simply 8-inch coping, and elevated benches. These benches are arranged differently in different houses. The object is to determine the best style of bench for different crops, and the best arrangement of these benches in the house.

In the construction of the benches, we aimed to take up as little space as possible with the thickness of the bench sides. The benches are all made of cinder concrete, reinforced with wire. The bench sides, except of the elevated benches, were made of cement slabs, three inches thick at the bottom, two inches at the top, two feet eight inches wide, and 5½ feet long. These were made on their flat, and electric weld wire placed in the middle of the slab, allowing four inches to project at each end of the slab. After they were well set, they were lifted and taken to the house, set in place, and the wire at the ends hooked together. Then thin concrete was run in between the joints, putting up boards to hold it, and the whole braced on the inside by an occasional cement beam to prevent spreading. We have not been long enough at the work to give any information on the relative merit of these benches, but hope to do so in time.

The problem of greenhouse soil will receive our attention. An experiment that we propose to take up is the growing of a crop on the benches, principally in the summer, for the purpose of incorporating fibrous roots, and bring about a rotation, saving the work of renewing bench soil so often. This, of course, is impracticable, with some crops, but it seems possible that some quick-growing, heat-loving crop will prove useful in this connection. The physical condition of the soil for various crops has not received enough attention, and in this connection we have experiments under way in which the soil has been incorporated with chopped alfalfa in different proportions. Experiments aiming to get more definite information as to the physical property of soils best suited to greenhouse crops will be taken up as rapidly as possible.

The best time for benching different crops to get best results has not been well worked out in our northern districts and along this line we aim to devote some time. Selection of cuttings from the most productive plants to increase the yield, is a problem not worked out on a commercial basis. I fancy that if the florists could see by concrete experiments an increase in cut of bloom equal to 25 cents a plant, through such a system, some attention would be paid to this important question. Then we have the problem of getting pure

fresh air into our houses during the cold winter months, when no ventilators can be opened. The quetsion also of percent of moisture in the air during the winter months is one worthy of attention in this section.

Experiments to determine the temperature at which we can develop different crops most economically during our winter months is one on which several thousand dollars could profitably be expended. There are countless experiments that could be carried on, giving light on the various sides of this occupation. Limited space, continuation of the experiments over a number of years, and the fact that several different experiments cannot be conducted at once in the same house renders the working out of these problems necessarily slow.

Massachusetts Agricultural College,

DEDICATION EXERCISES.

Appropriate exercises for the dedication of French hall and the Durfee range of greenhouses were held in the former building, March 12 at 2 p. m., Professor Frank A. Waugh presiding. The first speaker was President Butterfield. He welcomed those present on behalf of the college, and spoke briefly on the building of French hall and the greenhouses as one of the most significant advances. He went on to say that an agricultural college must not only teach students but must be of practical use to the practical men in the state following these lines. M. F. Dickinson was introduced as the chairman of the building committee of the trustees and formally accepted the building in their behalf.

Prof. Waugh then introduced W. H. Bowker of Boston who spoke long and very interestingly of Henry F. French and Nathan Durfee. E. A. White, professor of floriculture at the college, then gave an address on "The Development of the Greenhouse Project." The building as now designed is considered to be but a part of a future building. W. H. Ritchie of Boston did the architectural work on the building, and the contract for construction was let to Allen Bros. of Amherst. As the building stands today, with the equipment, the cost is approximately $17,000.

J. K. M. L. Farquhar was next introduced. He spoke on "What the Greenhouse Has Done for Horticulture." After his picturesque remarks he entertained the audience with lantern slides which he had collected of pictures representing the greenhouse enterprises in England, Belgium, Holland, Germany and Russia. He spoke on the different crops grown in the several countries and finished his lecture with views of houses in the United States.

The visitors at the exercises were then given a rare treat in the form of a huge flower exhibition in the laboratory of French hall. Flowers were received from many Massachusetts growers. A number of designs were made by the members of the senior class in floriculture which included "Odd Fellows" by H. B. Phelps, star by John Noyes, anchor by J. R. O'Grady, white pillow by J. T. Oliver, masonic emblem by D. J. Caffrey, cross by F. H. Wilson, galax wreath with lily of the valley by B. F. Barnes, ivy wreath with violets by E. P. Hathaway, Maltese cross by T. C. Waters. The arrangement of these designs was under the direct supervision of N. J. Fennelly, for several years with Thomas Galvin, Boston.

Carnations were exhibited by the F. R. Pierson Co., Tarrytown-on-Hudson, N. Y., who had 12 varieties. E. B. Beals of Springfield displayed a number of seedlings. The Worcester Conservatories had the largest exhibit, having 15 vases. Peter Fisher exhibited a number of seedlings. Another large display of 10 vases was made by Patten & Co. of Tewksbury Center. William Sim of Cliftondale had a mammoth exhibit of sweet peas, including 15 vases of as many varieties, and three huge vases of violets. There was a large exhibit of roses by A. N. Pierson of Cromwell, Conn., Eber Holmes of Montrose, exhibited three large vases of roses, while W. H. Elliott of Brighton had a large vase of pink Killarney roses. Bride and Bridesmaid were exhibited by Robt. Montgomery of Natick, and a large vase of White Killarney roses shown by the F. R. Pierson Co. There were also eight baskets for table decorations exhibited by Edward MacMulkin of Boston, and a display of 50 White Killarney—Waban variety—on exhibition by the Waban Rose Conservatories of Natick. Pierce Bros. of Waltham sent several varieties of carnations as did also H. H. Rogers of South Sudbury and J. W. Adams & Co., Springfield, Mass.

THE SHORT COURSE CLASS.

The short course just ended has proved to be a success in every way. This has been largely due to the splendid co-operation of the practical men who have so generously contributed the results of their experiences. In every case these have been given without financial remuneration. The college feels deeply indebted also to those men who contributed so liberally to make the flower exhibition a success. This is a valuable object lesson to the students as it shows them high grade stock and creates enthusiasm for the work such as can be aroused in no other way. Nearly all the young men who have taken the short course now have positions on commercial places. The last day of the short course, Wm. Sim of Cliftondale, gave a most interesting and instructive talk to the floricultural classes on "Sweet Pea Growing Under Glass." Mr. Sim brought with him 15 varieties of splendidly grown sweet peas, which made his talk especially valuable.

E. A. W.

Rose Culture Under Glass.

A paper read by N. Butterbach before the Elberon, N. J., Horticultural Society, February 15.

We could never see any difference in cuttings from blind or flowering wood of tea roses. Different growers prefer different sizes of cuttings. Some take two, some three eyes. A keen edged knife should be used and the cut should be as short and clean as possible. The depth of the sand should be from 3½ to four inches. Insert the cutting about half way between the surface and the bottom; there the heat and moisture will be uniform. The temperature of the sand should be about 60°, and that of the house 56°. This lower temperature of the house will retard the buds while roots are forming. The cooler the cuttings are rooted the quicker they act after being repotted. During bright weather the cutting bench should be sprayed several times a day; the moisture of the foliage will greatly help the formation of roots. In about four weeks they should be ready for potting. Cuttings of American Beauty are far more difficult. Select the short-jointed blind wood. From two to four eyes can be taken in accordance to the distance of the eye. The bottom heat should be 68° and the temperature of the house 58°.

POTTING.

As soon as the roots are from ¼ to ½ an inch long, the cuttings should be potted. If they are left too long in the sand the plants will receive a check when potted. Two to 2¼-inch pots are right for Bride, Bridesmaid, Golden Gate, etc., and American Beauty 2½-inch pots. See that the pots are clean, and if they are new have them well soaked. The soil should be a fibrous loam, four parts of soil to one part of rotten manure. The soil should be screened through a half-inch mesh. In potting get the roots as near to the top as possible, and don't press too hard, only to keep the cuttings standing firmly. Place them on a bench on coal ashes and water twice with a rose and shade them at once. The shading should be removed at night and on some cloudy days. Keep the soil moist, not soaked, and keep the house at a temperature of 58° at night, with a rise of 10° to 15° in the daytime.

REPOTTING.

When the ball is rooted through, the plants should be repotted. The soil should be prepared the same as for cuttings. See that it is free of lumps and the plants potted firmly. Remove a lit-

MASSACHUSETTS AGRICULTURAL COLLEGE.

Short Course Class in Floriculture.

SEATTLE, WASH.—Mrs. J. B. Romans, formerly of Columbus, O., died here suddenly while waiting for a car.

DAYTON, O.—At the meeting of the Florists' Club, March 1, H. H. Ritter was elected president, Horace M. Frank, secretary and Geo. Bartholomew treasurer.

HARTFORD, CONN.—A certificate of organization has been filed in the office of the secretary of state by the F. Brewer Co. of Middletown. William B. Brewer, is president and treasurer; Grace Arnold Brewer, secretary. Directors, William B. Brewer, Grace A. Brewer and Wesley U. Pearne, all of Middletown.

tle of the soil at the top of the ball and at the edge. For grafted stock get the graft as far under ground as possible each time they are repotted. A plant from two to 2¼-inch pots will take a 3-inch, and a 2½-inch pot plant will take a 4-inch pot. They will fill the pot quicker and make a better growth if not shifted into too large a pot. American Beauty requires a heavier soil and a 3½-inch pot. Give plenty of drainage and do not crowd the young plants. They ought to have the best place in the house where they get the full benefit of the sun. Syringe on every bright day and never allow them to get dry for any length of time. If sulphur cannot be applied on the pipes, a dusting with a bellows will be needed. We use common hand lanterns if there is no heat from the pipes. We put a thick layer of sulphur on top of the lantern and light the lantern, and we never had any damage of yellow or burned leaves.

PREPARING SOIL AND PLANTING.

Early in spring is the time to prepare the soil. A good friable loam, if possible from an old cow pasture, put up in a square pile about two feet high with one part of good stable manure. After three weeks the pile should be chopped in pieces and turned over. The pile should be turned every three weeks until needed to prevent weeds from growing. When the benches are filled and the soil well pulverized, we spread bone meal about one pound to the running foot of bench evenly and mix it well by hand. If there are any rough pieces these are well broken up. We prefer early planting and selection of good stock. A sickly plant is discarded, and the stock is planted carefully, regardless of time, and firmly, without damaging the ball of roots. Use nothing but the hands. Some prefer firming them by working through the rows. After a bench is planted, level it nicely and water carefully around each plant without soaking the whole bench. The houses should be planted in June or not later than July.

CARE OF YOUNG STOCK.

Much of the success or failure of the crop is attributed to the care taken of young stock. Our main effort should be to get healthy, stocky growth, and this can only be got by timely cultivation, watering, ventilating and feeding. The cultivation should be continued until the feeding roots reach so close to the surface that the cultivation cannot be carried on without injuring the plants. Careful watering is also of great importance at the different stages of the growth. Not alone should the man know how to handle the hose, he must also consider the outdoor atmosphere. If evaporation is rapid and the atmosphere dry, the plants can hardly be overwatered, but if the atmosphere is moist, watering must be done very carefully. A man who knows how to handle the hose can syringe as sharp with little water as some with full force on and soaking the bed. As soon after planting as time can be spared, the plants should have supports and should be trained in position, so the light and air have full access. Grafted stock should have supports as soon as planted. In fact, it is better to give them a little support when in pots. Pieces of wire eight or ten inches long are sufficient. This will protect the scion from being detached from the stock when syringing.

If the soil had a proper quantity of fertility at planting time, very little feeding is required except a light sprinkling of bone meal and wood ashes at intervals, or a dusting of lime, until the bench is well filled with roots. There is no special time set for mulching; each grower must know when his plants need feeding. In raised benches with about four inches of soil left after the summer's growth, the bench is naturally exhausted. A sprinkling of bone meal with a top dressing of two parts of rotten manure to one part of soil is our first mulch. Air slacked lime, wood ashes and bone is used alternately later on. A top dressing of cow manure and soil is used when the roots show on the surface. In the short days when a heavy crop has been cut, the beds ought to be kept on the dry side for a week or so to increase root action, but it should not be overdone; simply keep the bed in a mellow condition. When the days get longer and brighter, more air and water can be given to plants in active growth, also more stimulant can be applied in the way of liquid or mulch. We find American Beauty does better by giving from time to time a light mulch and a dusting of bone or ashes than feeding too much liquid manure. The fallen leaves must be kept picked up and disbudding attended to. The shoots which touch the glass must also be tied down.

VENTILATING AND TEMPERATURE.

The most important duty of a successful rose grower is the right handling of the ventilator. Careless ventilating is the cause of more mildew than anything else. When the house rises to 65° raise the ventilator just a few inches, but never enough to get a sudden drop of temperature. It should be raised inch by inch, according to the outside temperature, in the afternoon reducing the air in the same manner. During the short days the houses should get all the air possible. Keep a little fire going with a crack of air on. Watering and syringing have to be done very carefully at this time of the year. Sometimes the bed has the appearance of having plenty of moisture, but by examining the benches it will be found that the bottom is quite dry, especially when heavy firing is done. Red spider is troublesome at such times, especially with American Beauty, and if this insect gets a hold there will be no flowers until spring. The temperature for American Beauty houses is 60°, for Bride and Bridesmaid 56° to 58°, for Golden Gate and Ivory 54° to 56°. Papa Gontier from 48° to 50°, with a rise of from 10° to 15° by day.

CARRYING OVER ROSES.

Prominent growers tell us that much finer, though perhaps fewer blooms are cut the second year than the first. The stems are larger and stiffer and the flowers fuller, which is worthy of consideration. We have seen a good many failures in rose growing as the result of carrying over old plants, but this is generally caused by wrong treatment between seasons. We believe that success is to a certain extent due to the resting and starting period. It is a great mistake to attempt to grow flowers all summer without any rest whatever. The opposite extreme, insisting on an absolute cessation of growth, notwithstanding the fact that nature is trying her best to encourage it, is just as injurious if not more so. If the soil becomes dry and hard, the tender shoots shriveled up, the fine roots destroyed, this causes exhaus-

ROSE WELLESLEY.

tion, not rest. The resting of the plants is meant to store up and concentrate vitality for future use. This can only be accomplished by keeping the soil on the dry side, only dry enough to harden and ripen the wood, but at the same time never to stop root action altogether.

To Be Done Now.

IN THE GREENHOUSES.

Give the marguerites plenty of room so they get a good circulation of air around them and feed lightly as soon as the pots are well filled with roots.

Keep the manetti suckers regularly picked off the young grafted rose stock. Never leave the shoots in the grafting case but have a small tray at hand to keep them in and throw them out when finished.

Nitrate of soda is an excellent feed for palms that are strong but deficient in color.

Just bury the young cyclamen corms when potting. They will work up as they root sufficient to clear the crowns.

In potting palm seeds that have started to grow, carefully avoid breaking off the root.

Sow parsley again for frame culture and for early plantings outdoors. Sow thinly and avoid overwatering as the seed takes a long time to germinate.

Plant out asters on the benches for early flowering inside and sow again for outside plantings.

See that all bedding stock has plenty of room to develop. Any plants that are allowed to run up to flower now will be useless for all practical purposes by June 1.

Pot the bulbs of yellow callas and Calla maculata and start them going for the season.

OUTDOORS.

Plant out Eremurus Himalaicus and E. robustus, burying the large, star-like roots about four inches deep.

Harden frame cauliflower plants by removing the lights entirely by day and allowing some air at night.

Stenanthium robustum and Physostegia Virginiana are useful plants for cutting and may be obtained and planted.

It is quite safe to plant out all semi-hardy stock such as Pyrethrum roseum and seedling stock of hardy perennials.

In making hotbeds well shake out every forkfull of manure as this will insure better and more regular heating.

Pansy Notes.

Named fancy pansies that are of extra merit for giving pronounced color effects are represented by those old familiar varieties, Mrs. William Watson, lemon-yellow and black; Miss Stirling, cream and mauve; and Crimson Marmion, says the Gardener's Magazine. Show pansies, having petals less covered by dark blotches, appear of more "self" hues, yet it is doubtful if anything can surpass the warm or golden tints that the fancies, when grown to giant size, are sure to yield.

When shrubs are to be associated with pansy displays the golden-foliaged should be placed only among the dark-hued, and green-foliaged among white, cream, pale blue, mauve, rose, or yellow.

Shrubbery glades can be made beautiful by pansy planting in sufficient quantity; among sheltering branches the flowers will be protected from too much sun scorching, and the roots will find the cool moisture they need.

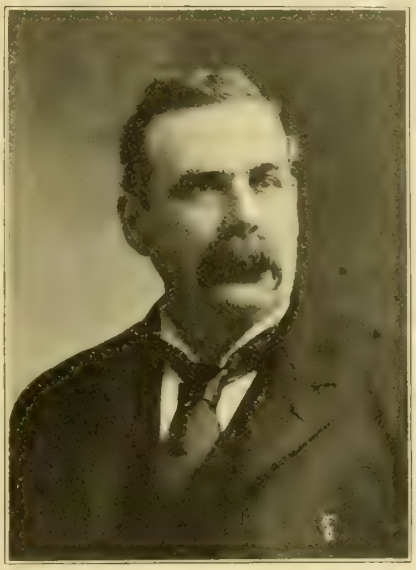
It will be essential to make the soil thoroughly rich, and if possible stiff clayish loam should also be incorporated; after this preliminary care a weekly watering of a thorough nature, followed an hour or so later by an application of liquid manure, will keep the plants healthy through the dryest summer.

In shade, or semi-shade, pansies, will flower freely for eight or nine months of the year, provided that they are kept from seeding, and have their number of shoots reduced now and then.

OBITUARY.

Louis M. Noe.

Louis M. Noe, of Madison, N. J., died March 11 of pleuro-pneumonia, after an illness of three weeks. It is thought by his friends that an accident he met with



The Late Louis M. Noe,

in Dakota last September hastened his death. Mr. Noe was a life-long resident of Morris county, and one of the most extensive rose growers in the country. He was born in Chatham township May 13, 1847, and represented one of the oldest families in the state. He was of French descent, his grandfather, Louis Noe, having come to this country as a soldier with Lafayette and served through the revolution.

The Late Eugene Germain.

See Obituary Column Issue of February 27.

After studying law for two years he turned his attention to the nursery and fruit-growing business, in 1872 forming a partnership with his brothers-in-law, Samuel and O. N. Brant, comprising the firm of Brant, Noe & Brant. Their orchards were located in Pennsylvania and northern New Jersey. In the spring of 1884 he established his rose gardens, and gave up the interest in the peach-growing and nursery business to Samuel Brant. At the time of his death, Mr. Noe had an immense area under glass in Chatham township, and also owned half interest in the Brant & Noe Floral Co. in Chicago, of which he was president. This company has also a very large glass area.

He owned 500 acres of land, and in his orchards and gardens gave employment to an army of men. And it is a noteworthy trait of his character that he always paid as much attention to the comfort and proper housing of his employes as to his own family. One of his recent commercial ventures was the establishment of a model dairy, in connection with his son, Louis A. Noe, where milk from a specially collected herd of 300 cows is bottled and sold under the most improved hygienic methods. The manure from the dairy was used in the greenhouses.

In 1870 he was married to Miss Emily E. Brant, who, with three of their four children, survives him. The children are: Maria, wife of Lincoln Pierson, of the Pierson U Bar Co., who resides near the Noe etsate; Louis A. Noe, who also operates a large rose-growing plant and is the active manager in the dairy farm, and Miss Lillian May Noe. A third daughter, Edith, died in 1891, at the age of nine years.

RESOLUTIONS ON DEATH OF MR. NOE.

The following preamble and resolutions on the death of Louis M. Noe were passed at a meeting of the directors of the New York Cut Flower Co.

Whereas Louis M. Noe, our friend, counsellor and for some time vice president of our organization has been called from us by death, leaving a void, which to us seems one that cannot be filled, and

Whereas we who have been associated with him so long in this organization, feel that it is but proper that we place on record our estimate of his character and worth, and the sincere sorrow which each feels at parting with such a dear friend, able associate and worthy colaborer, therefore be it

Resolved That the members of the board of directors of the New York Cut Flower Co. do hereby extend to the family their sincere sympathy at this bereavement, assuring them that by his death, not only are we made mutually mourners for our beloved and respected friend but that, in the death of Louis M. Noe, we have been deprived of the advice and assistance of one of our most useful members

Resolved, That this preamble and resolution be placed in full on the minutes of this company, a copy of the same be published in the trade papers and also in the local papers of Madison, Chatham and Summit, N. J., and that an engrossed copy be sent to the family.

HENRY HENTZ, JR.,
S. C. NASH,
F. L. MOORE,
Committee.

Patrick H. Lawlor.

Patrick H. Lawlor, for many years in the nursery business at Flushing, N. Y., died at his home there on March 10, aged 70 years. Mr. Lawlor was a native of Ireland, coming to this country 59 years ago. For many years he was connected with the Parsons Nurseries of Flushing. Much of his service to the Parsons concern, was in a business capacity as he had made trips to Europe in search of rare trees and plants. Lawlor was to the business end of the Parsons concern what Trumpy, a sketch of whom recently appeared in these columns, was to the propagating and growing departments. Mr. Lawlor was a genial and kindly man, well liked by all with whom he had relations. Since the Parsons Nurseries went out of existence, we do not understand that he has been actively engaged in business. He is survived by a wife and six children.

DORMANT, perishable stock can now be shipped by freight with reasonable safety.

EASTER, that holiday of all holidays for the florist, is only 22 days away. Are you ready on all lines?

THE advancing price of brick would seem to be a still further reason for the increased use of concrete.

PARTICULARS of an examination for city forester for Chicago will be found in our "Nursery Trade" column.

EIGHT THOUSAND palm leaves for Palm Sunday arrived at New York from South Florida on Tuesday by steamer Savannah.

THE quotation for 1¼-inch greenhouse pipe is 4½ cents per foot, as compared with 6¼ cents per foot one year ago, in car lots.

THERE is much food for thought in the article on "Bull-head Roses," by C. B. Whitnall which appears elsewhere in this issue.

A PROMINENT British horticulturist refers to the "new catalogue of sweet pea 'names'" to be issued by the National Sweet Pea Society. Is this to be "took sarkastic"?

THE quantity of combustible gases liberated but not consumed when fires are banked or smothered down with coal is a point worthy of consideration by those who are looking for profit leaks.

AND now it is radium and plant life that the scare paragraph writers are exploiting. Thoughtful people will take these paragraphs with a large grain of salt until the experimenters tell us what they really have done.

American Carnation Society.

CARNATION REGISTERED.

By Dailledouze Bros., Flatbush, N. Y.—The White House, color, white, very large with stiff stem and excellent calyx. A good keeper, good bloomer and good grower. ALBERT M. HERR, Sec'y.

Glass.

L. E. Partridge, of Sharp & Partridge, Chicago, expresses the opinion that the proposed reduction in the tariff on greenhouse sizes of glass is too slight to have any noticeable effect on the price of the domestic product. The proposed reduction will not be over six cents per box at the outside limit. Moreover, little or no greenhouse glass has been imported for the past five or six years.

Tariff Committees Meet.

At a joint meeting of committees representing the American Seed Trade Association, American Association of Nurserymen and the S. A. F., held at the Iroquois hotel, Buffalo, N. Y., March 18, it was resolved that the members of the above organizations appeal individually and collectively to congress to make all duties upon seeds, nursery stock, bulbs, etc., whatever revenue they may be intended to produce, or whatever interests they may protect, upon a specific basis. The various branches of the trade were well represented.

National Council of Horticulture.

The first installment of the press service of the National Council of Horticulture has reached us. This is the third season these useful articles have been sent out and both local editors and nurserymen and seedsmen should apply for and use them in their circulars, catalogues and other publications. The titles of the present series are: "Lawns," "For Indoor Planting" and "Planting in March." The articles are entirely free and may be had on application to J. H. Burdett, 1720 W. One Hundred and Fourth Place, Chicago.

Plant Notes.

Among the later additions to the pink astilbes (spirea) are two of German origin that promise well, Ardensi Ceres and Ardensi Pink Pearl. They are recommended for planting for waterside effects but will probably be equally satisfactory as pot plants, the height being given as 2½ feet, the color pink. Pink Pearl is softer in color than Ceres and flowering a little later thus insuring a succession over a considerable period.

Those who have summer conservatory decorations to keep up will find Cæsalpinia (poinciana) pulcherrima a useful and extremely showy plant for the purpose, easily grown and each growth topped with a fine head of flowers of a bright orange and red color. It is not much grown but nothing is easier. It may be reared from seeds or cuttings and grown and shifted on to any desired size. Very large specimens are not, however, as desirable as small, neat plants.

A writer in the Deutsche Gaertner Zeitung praises highly a French variety of heliotrope, called Mathilde Crémieux, obtained by M. Bruant. The plant, he says, is vigorous, neat in habit, and produces very large and compact umbels, deliciously scented, and of a tender lilac-blue. Planted in clumps, it is, when in bloom, superb. Its color, which is unique, is not found in any other race of plants.

Salvia Zurich is a plant of many names. Our friends across the Atlantic are calling it Pride of Zurich and Glory of Zurich and the English trade papers are calling attention to the trouble caused by this duplication of names. Zurich is expressive, short and a good name for this excellent bedder.

In a recent issue of The Garden there is a colored plate of Nemesia Blue Gem. The flowers, as there depicted, are a beautiful forgetmenot-like blue and if it is as free and easily grown as the ordinary nemesias this should prove an excellent bedding annual and we have not too many in this color.

Catch Crop for Decoration Day.

ED. AMERICAN FLORIST:—

I have a bench in a rose house, night temperature 58°. Would you suggest a crop of cut flowers for Decoration day? The bench will be utilized next season for carnations so I desire just a temporary quick crop. How would candytuft do? If you suggest same give the culture, please.

O. F. C. S.

If we were in "O. F. C. S.'s" place we would plant the bench in the rose house with stocks, preferably the double white, and purple or lavender shades, the latter being a good seller. Get the seed from a reliable firm and sow in flats at once. As soon as they get large enough to handle easily transplant them in flats again about an inch and a half to two inches each way between the rows. When they fill out this room, they will be ready for benching, and they can be planted about five inches apart each way on the bench using about four inches of good, light, rich soil. Shade for a few days after benching and do not run them too hot during the day. If "O. F. C. S." would like to try candytuft, pot the plants in small pots from the seed boxes

and when nicely rooted, plant on bench about the same distance as advised for the stocks, or try some of each and in this way find out which takes the best in the locality. E.

Asparagus Sprengeri.

ED. AMERICAN FLORIST:—

Will you please state in your columns what a bench of 4x300 feet of Asparagus Sprengeri will yield in a season? Also state best culture for same. Would it be best to grow in pots or in the bench for cutting? L. K.

A bench of 4x300 feet will hold three rows of about 240 plants each, about 720 plants in all, which at a low estimate should average about 50 cents per plant for a season's cut of the sprays; for bench culture 12 inches of soil is better than six, as asparagus with its fleshy thick roots loves a rich deep soil, and only in such will do its best. It seems almost wrong to devote a bench of this size to Asparagus Sprengeri. Not that it isn't worthy of it, but other crops which couldn't be grown in baskets ought to occupy the bench room. We have been growing A. Sprengeri for a number of years with the very best results in wire baskets, which can be suspended from the purlins and other places in order to give the sprays a chance to develop properly. Use 3 or 3½-inch stock between now and June, three plants to a 12 or 14-inch plain wire basket, lined with moss and filled with good rich rather heavy soil. These baskets can be stood close together on a bench until the plants become crowded, when they should be hung up. Feed from time to time with liquid manure. F. B.

Insects on Sweet Peas.

ED. AMERICAN FLORIST:—

Will you kindly let me know how to destroy moths and worms on sweet peas. I used Wm. Scott's formula of 2½ ounces cyanide, 1 pint water, and 8 ounces in graduating glass of acid, which I considered one pint, to every 1,500 cubic feet of space. My houses are 100 feet long, 21 wide and 6 feet to gutter, even space, and 6 feet from ridge perpendicularly to line of gutter. For one house I used 12 jars, which I considered right and it hurt my stock badly. C. A. M.

The insect is the common greenhouse leaf-tyer (Phlyetaenia ferrugalis). Thus far hydrocyanic-acid gas has not been found to be an effective remedy against this species. In order that it may be effective it would be necessary to use it at least three times, about the time the insect was transforming either from the egg to the young larva or when the larva was transforming to the next molt, or when the larva was transforming to pupa. This would necessitate considerable very close observation to determine the exact times. We have little doubt, however, that if any one would take the trouble to examine the insects day by day to determine the proper time, they could be destroyed. "C. A. M." does not state the length of time the fumigation was continued, which is an important point. Then, again, sweet peas might be more susceptible to hydrocyanic-acid gas than other plants would be. C.

Meetings Next Week.

Baltimore, Md., March 22, 8 p. m.—Gardeners' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Boston, March 24-28.—Annual spring show of the Massachusetts Horticultural Society, Horticultural Hall.

Cleveland, O., March 22, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit Street.

Hartford, Conn., March 26, 8 p. m.—The Connecticut Horticultural Society, County building.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—By practical gardener and florist; private or commercial; life experience; good reference. Address J. HODGE, 210 N. Tod Ave., Warren, O.

Situation Wanted—By first-class grower of roses, carnations and general stock; 20 years experience; married; best references. Key 823, care American Florist.

Situation Wanted—As working foreman who thoroughly understands growing; all kinds of cut flowers and general line of pot plants; 18 years' experience; single German, age 32. Address "FLORIST" 429 Halifax St., Raleigh, N. C.

Situation Wanted—By a young man, 23 years of age; speaks three different languages; 10 years' experience; able to take charge of a small or private place; south or western states preferred; first-class references. Address Key 818, care American Florist.

Situation Wanted—By an intelligent, industrious young married man, aged 28 Hebrew; considerable experience in general greenhouse work; capable of taking care of ten or twelve thousand feet of glass. Please give particulars and wages. Key 819, care American Florist.

Situation Wanted—By a young man of good character; wants position as traveling salesman for florists' supply house or bulb house; with some experience; florist by trade; can furnish A1 references; N. Y. or Pa. preferred; ready any time. E. M. DUSINBERRE, Corning, N. Y.

Situation Wanted—As foreman or first-class grower by German florist; can grow roses, carnations, 'mums, lily of the valley and general stock; sober; married; 32 years old; nine years' experience in Germany, six years in the U. S.; best reference. Address NICK TERTSCHEK, 2091 William St., Columbus, Ohio.

Situation Wanted—To take full charge of commercial establishment; good grower of roses, general greenhouse and nursery stock; salary, commission or share; no drinker; married; no children; permanent; good wages, references, state terms with house. Address GROWER, 180 Grand St., Jersey City, N. J.

Situation Wanted—By a single, industrious young man, with 12 years' experience in greenhouses, landscape and decorating; capable of taking charge of a small range of glass, commercial or first-class private place; nationality, American; speaks German and French. R. N. SCHMIDT, 2449 Harrison Ave., Cincinnati, O.

Situation Wanted—As gardener, private preferred; lifetime experience in the management of fruit, flowers and vegetable garden, lawns and drives greenhouses palms, ferns, roses, carnations, chrysanthemums violets and plants for bedding, cut flowers, shrubs and hardy perennials, and landscape work; single; please state wages and terms in first letter. W. C. WOOD, Reeston and 16th St., Richmond, Ind.

Situation Wanted—Where a good man is wanted to take charge of nursery; long experience in growing stock both under glass and outdoors; good at propagating, deciduous stock, evergreens, fruits, etc. First class at making surveys drawing plans and carrying out high class landscape work; permanent place; sober, references, state full particulars and wages with house. Address NURSERYMAN, 180 Grand St. Jersey City N. J.

Help Wanted—Grower of pot plants; German preferred; state experience and wages wanted. JOSEPH VACHA, 2559 47th place, Chicago.

Help Wanted—Good first-class rose grower; married man preferred; good wages for suitable man. Key 824, care American Florist.

Help Wanted—A good helper with 2 or 3 years experience, steady worker and good wages. EDWARD TATRO, 401 E. Iron Ave., Salina, Kansas.

Help Wanted—Married man for position near Chicago; acquainted with nursery and farm work; state age and wages. Address Key 811, care American Florist.

Help Wanted—A gardener and florist to take charge of a small greenhouse and grounds, also vegetable garden. STATE PUBLIC SCHOOL, Owatonna, Minn.

Help Wanted—A good sober, industrious man for general greenhouse work; steady job to the right man. Address JAS HORAN & SON, Florists, Bridgeport, Conn.

Help Wanted—A thoroughly competent, reliable and experienced man, to fill position in retail store in Los Angeles. Apply to WRIGHT'S FLOWER SHOP, 224 W 4th St., Los Angeles Calif.

Help Wanted—A good designer and decorator; must be experienced and able to give references from past employers and be sober and industrious. None other need apply. Address Key 795, care American Florist.

Help Wanted—Want to correspond with a first-class grower, capable of taking charge of 40,000 to 50 000 feet of glass where a general line of stock is grown for the wholesale and retail trade. Address KEMBLE FLORAL CO., Oskaloosa Iowa.

Help Wanted—A man to act as foreman on truck farm near Terre Haute Ind.; a good position for a good man. Give reference in detail, regarding ability, character, whether married or single. DAVID DICKSON PRODUCE CO., Office: 1107 Commonwealth Bldg., Pittsburg, Pa.

Help Wanted—Designer, decorator and first-class store man; one with wide experience and capable of giving his entire thought and study to his work; permanent position if satisfactory; address stating references, salary expected, with full particulars to Z. D. BLACKISTONE, Washington, D. C.

Help Wanted—Young man to take orders and handle cash in cemetery greenhouse office; must be bright, quick, of good address, and able to furnish unquestionable reference as to honesty. Retail flower store experience is desirable and a knowledge of the growing part of the business will be an advantage; man is wanted for about 3 or 4 months, but there is a possibility of a good permanent place for a man of exceptional worth. W. N. RUDD, Morgan Park, Ill.

Partner Wanted—With $800 to $1000, to take half interest in greenhouse and store; good business; established a year; city of 250,000; want to enlarge. Key 822, care American Florist.

For Sale—In central northern state an old established florist business over 15 000 ft. glass well stocked, about ten acres land $2,500.00 down balance on time to suit purchaser. Key 799, care American Florist.

For Sale—Retail florist business; best section of Philadelphia; established for thirty-five years; busy all the year; good transient and order trade; also decorating and funeral trade; very cheap if sold at once; can show exact profits; best reasons for selling. J. T. JACKSON & CO., 13th and Chestnut Sts., Philadelphia, Pa.

Manager Wanted.

$1200 salary and cottage to hustling greenhouse manager thoroughly posted in all branches for a large retail florist business; 100,000 feet of glass, middle Atlantic states; an energetic man would be given an opportunity to buy an interest. Write with all particulars.

CONOVER CO.,
care American Florist, Chicago.

WANTED.

Some one who will take up a desirable lot, low in price for the purpose of erecting greenhouses on it. The place owned by me is on the outskirts of Cranford, N. J., very favorably situated for a greenhouse business where a good home market can be had and where it is accessible to New York. I am willing to build the greenhouses for the man and then either rent or sell to him on easy terms Key 821, care American Florist.

My greenhouse establishment, wholesale and retail; 35,000 sq. ft. of glass in town of 10,000, 10 miles from Chicago; also dwelling and 15 lots; must sell on account of sickness. **F. R. HILLS,** Maywood, Ill.

For Sale.

For immediate delivery one No. 6, No. 7, No. 8 Superior Internal Boiler.

Superior Machine & Boiler Works,
125-133 W. Superior St CHICAGO, ILL.

Roses of Quality in Quantity

We can now supply any number, large or small, of **Killarney, Maid, Bride** and **Richmond,** well filled heads, long, medium and short stems.

Carnations

too, can be supplied. The best in any quantity.

Tulips, Daffodils, Jonquils, Violets, Valley, Greens

If it's in Chicago, we can furnish it.

Lilies for Easter

Before placing your order, write us for prices. We shall have a good supply of the finest possible stock.

Remember, the reason our trade is growing is because **our customers' interests are our first concern.** We have the stock, and our prices and service are both right.

ZECH & MANN,

WHOLESALE FLORISTS
L. D. Phone, Central 3284
51 Wabash Avenue

Chicago

Madison, N. J.

The Morris County Gardeners' and Florists' Society held its "carnation night" on March 10. L. J. Reuter of Westerly, R. I., delivered a masterly discourse on the carnation. His fame had come here before him and consequently the hall was packed to the doors. Mr. Reuter gave us the result of his observations while on his western tour and many profitable hints were given. He likes the solid bench for carnations. He uses solid and raised benches at home, so his conclusions were worth something. So far as culture goes, he said the grower has to, to a great extent, work out his own salvation, as soils and conditions vary so much in different localities. The arrangement of his cutting house was new to us. He has it so that he can vary his heat under the bench for freshly put-in cuttings and rooted ones to suit. He takes no credit for the device as it is a borrowed idea, but it works well. A rising vote of thanks was tendered him for his fine effort.

We had a magnificent vase of Alma Ward from the Cottage Gardens Co. The same high standard in the flower is maintained, still everybody wanted a bloom, It was given a vote of thanks. President Taft did not get from Scheiden & Schoos, Chicago, in time to be judged. We were sorry for the delay in transit. Dorothy Gordon from Joseph Heacock, Wyncote, Pa., showed up fine and secured a certificate of merit. Red Seedling No. 1, John S. Green, Morristown, N. J., was certificated last year; a fine thing; vote of thanks. Ruby from S. J. Reuter, a fine full flower but not in sufficient quantities to be judged for certificate. Committee desires to see it again in larger quantity. Vote of thanks. One vase each, Winsor, Robt. Craig and Enchantress from A. R. Whitney (H. B. Vyse, gardener), was awarded cultural certificate. One vase mixed carnations from A. C. Van Gaasbeck, Orange, N. J. (John J. Dervan, gardener), was awarded cultural certificate. Three vases Variegated Lawson, Winsor and White Lawson from Gustav E. Kissell (Charles Steele, gardener), was awarded a cultural certificate. Three vases carnations, Enchantress, Afterglow and mixed from Florham Farms (A. Herrington, superintendent), was awarded a cultural certificate. From same grower came Cattleya Luddemanniana alba, flowering in this country for the first time, awarded a first class certificate of merit. Collection of Cattleya Luddmannana, containing some very fine and distinct types, cultural certificate. Collection of stocks, Beauty of Nice, Queen Alexandra and Crimson King, a well grown lot, cultural certificate. Dr. Leslie D. Ward (Andrew R. Kennedy, gardener), had a well grown lot of cinerarias of a very fine strain, cultural certificate. M. B. Metcalf of Orange (Geo. Wraight, gardener), had some very fine stock, Empress Elizabeth, and was awarded cultural certificate. Totty's Amaryllis Crimson King had very fine flowers. H. A. Barnard from Hugh Low's Nurseries, London, Eng., was among the evening's visitors. He had just completed his forty-eighth year with the same nurseries at 6 o'clock that evening, so it was a kind of an anniversary with him. He made a very happy speech and was cheered. Harry Bunyard is piloting him around, so you can draw your own conclusions. Mr. Bunyard offers $5 for the best flowering plant in flower at our next meeting. April 14, will be rose night and we hope to make good.

PRICES BETTER.

The past week was a most profitable one to the carnation grower if he was fortunate enough to have plenty of stock as prices were high. Roses continue scarce; the only flowers in any way over supply are daffodils and jonquils. This is caused by heavy shipments of outdoor stock from southern Illinois. Violets have advanced in price but not in quality. Some good long tulips are in. Lilies and callas have been somewhat plentiful. Some extra fine sweet peas are in and find ready sales also some extra fine Richmond and Killarney roses.

NOTES.

The monthly meeting of the Florists' Club was held Thursday afternoon, about 20 members being present. Owing to business pressure, President Young was unable to attend and the chair was ably filled by our friend Fred Ammann of Edwardsville, Ill. The committee on crepe pullers reported. It was stated that the daily press would be furnished the methods used by these persons to work on the sympathy of those in trouble and an endeavor be made to put a stop to these practices. The fall flower show was discussed and, in a neat speech J. J. Beneke said the time was now ripe for harmony and that the club was anxious to assist the Horticultural Society in having a show this fall and making it a grand success. A resolution was passed to that effect and this was to be mailed to the officers of the Horticultural Society.

Fire, believed to have originated from a defective flue, destroyed the house of C. B. Sanders on Olive street on Monday. The house contains 13 rooms. Mr. Sanders, his wife and children were at breakfast when the fire started. Most of the furniture was saved, but the house valued at $4,000 was entirely destroyed.

The flower stalls at the Union Market are opening up. Young's and Schray's having quite a display. Dominic Bova has opened up another flower stand on the Broadway side of the market.

Supplies and Everything in Season always on hand.

Julius Schooffer who recently opened a store at 111 North Sixth street is about to vacate this location as it has not proved a very profitable stand.

J. A. Valentine, president of the S. A. F. was here the past week and saw the sights accompanied by Otto G. Koenig and Fred Meinhardt.

Al Gunz, salesman at Angermueller's is a very busy young man and is a great worker, taking special care of the interests of his employes.

F. W. Bruenig is very busy with decorations for store openings.

W. F.

AURORA, ILL.—Frank Shaffer of Chicago, until two years ago a resident of this city, has purchased a half interest in the Aurora Greenhouse Co. from John H. Newhall and will return here. For his interest in the company Mr. Shaffer paid $3,000.

Easter Lilies **Longiflorum Giganteums.** Our reputation as to these flowers for Easter has been established for years. Grown by the most critical grower from the most expensive bulbs. Packed at the greenhouse and shipped in original packages direct to the consumer. No bruised or inferior flowers. You can't afford anything but the best in this line at Easter time. Get our prices. They are no more than you will pay other places for an inferior article.

Our White Lilac in now of the larger variety—especially fancy stock, and the crop is large enough to warrant the special low price we now offer it. **$1.00 per bunch.**

If you do not receive Our Cut Flower Price List regularly and are interested, drop us a line.
Also large supply of all other Seasonable Cut Flowers. Headquarters for both Single and Double Violets.

A. L. RANDALL CO., 19-21 Randolph Street, Phone Central 1496. Private Exchange All Departments. **Chicago**

Chicago.

MARKET ACTIVE AND PRICES STIFF.

The market the past week has been a very active one with fairly good orders and a rather short supply of stock and consequently high prices. A part of this is due to the demand for St. Patrick's day, which as a flower day has developed to a truly remarkable extent in the past three or four years. The sale of carnation green dye has been one of the aids to this as retailers very generally this year have purchased the dye and ordered 100 or 200 white carnations to experiment upon. As a result white carnations have been in very heavy demand, with prices as high as $4 per 100 for the best white. This exploitation has affected the sale of colored carnations as well, both to help out in the window displays and to meet the increased demand for flowers generally. At the same time carnations have not been coming in so freely this week as previously, the dark cold weather having to a certain extent shut off the supply. Roses too have been in good demand with prices somewhat higher. White stock in this line has also been used for dyeing not only with the St. Patrick's day green but also with the newly introduced yellow. Bride roses so colored are made by some retailers to take the place of Perle roses, which are very scarce. The only trouble with the yellow dye, beyond the fact that some florists object to this perversion of the laws of nature, is the slight yellow tinge it gives the leaves. American Beauty roses continue very scarce. Bulbous flowers have also been in very good demand. Some outdoor daffodils are now coming in and are being readily taken up. Sweet peas are in very heavy supply and prices are consequently rather demoralized. This is too bad as most of the stock is of excellent quality. Violets are not in such heavy supply as they have been and are now in fair demand. Easter lilies are very scarce.

WEDDING BELLS.

Harry M. Lubliner of the firm of Lubliner & Trinz was married Tuesday, March 16 to Miss Beckie Harmon at the bride's residence, 4723 St. Lawrence avenue. The bride carried a shower bouquet of lily of the valley and white orchids. The house was elaborately decorated with Asparagus plumosus and Mrs. Marshall Field roses. The table decoration was also of Field roses. Mr. Lubliner on Monday evening gave a bachelor's dinner at Rector's which was very much enjoyed by a select circle of friends, including among others, Alderman Peter Reinberg, Leonard Kill, N. J. Wietor, A. Spencer, Wm. Kidwell, Jas. Andrews, J. Trinz, Wm. Lubliner, and Joseph Foerester.

ENGAGEMENTS.

Wm. Feniger, of Toledo, was represented on this market last week when the mail brought a solitaire diamond ring to Miss Lily Bloom, the young lady who types Bassett & Washburn's letters.

Tom Fogarty, buyer for O. J. Friedman for the past 10 years, has at last been ensnared by Dan Cupid, it being rumored that he will be married at an early date.

NOTES.

The bowling committee of the Florists' Club has issued a call for the bowlers to gather at Bensinger's alleys, 118 Monroe street, on Friday evening of this week and the ladies are invited. The season promises an unusually interesting one and it is confidently predicted that the local team going to the S. A. F. convention at Cincinnati this summer will run up some high scores.

C. S. Griffith, of 160 North avenue, is to invade the fashionable north shore district by opening a well appointed place in the Plaza hotel on or about April 1. He intends to carry a full line of all seasonable novelties, table favors and the like. The new place will be known as the Plaza Flower Shop.

J. S. Haskins, one of the pioneer florists of this city, who opened a store at State and Lake streets in 1866, died February 28, at the age of 89. J. W. Ingalls of Rockford is deceased's nephew.

Vaughan's Seed Store reports a much larger demand this spring than heretofore for spring flowering bulbs and tubers, such as gladioli, tuberoses and begonias.

Andy McAdams reports fine gulf stream springtime revels at Melbourne, Fla., and intimates that he can unfold some fishy tales on his return.

John J. Davis, assistant to the state entomologist, is to have charge of a new experiment building at Oak Park and will commence work at once.

N. C. Moore & Co., are showing some very fancy double stocks, including pink, white and lavender.

Vaughan & Sperry will move, May 1, to the basement of 52-54 Wabash Avenue.

TRADE QUIET.

There is little change, worthy of note, in the condition of the cut flower market. Both wholesalers and retailers agree that it is very quiet. While there has been no glut or great surplus during the past week, there was no scarcity of anything. The conditions of supply, since Christmas, have been as near ideal as we may ever expect to see them. American Beauty roses, while not in surplus ,have been plentiful enough to supply all demands at 50 cents and 60 cents for specials. The same may be said of Richmond, Killarney, Bride and Bridesmaid. A few very special Richmonds with stems of the strong proper-50 cents each, but that is not an index tion of fancy American Beauty, bring to the market, as very many more go at 15 cents to 20 cents. Killarney has been doing well when it sold for 10 cents and 12 cents, and 10 cents has been the top figure for special Bride and Bridesmaid. My Maryland and Mrs. Jardine are now arriving in appreciable quantities and bid fair to soon become important factors in the wholesale district. There are plenty of good carnations, but it is hard to get more than three to four cents for the best. Violets are being sold by thousands on the street corners. Yellow narcissus is also prominent in the trays of the street venders. Baby pots of shamrock may now be bought in the leading retail stores at very reasonable prices. We judge that Harris of Philadelphia and his able superintendent, Mark Mills, are to some extent in the game.

March 15.—The weather is fair and there seems to be a prospect of a good week. Reports from wholesalers are conflicting, but as a whole, the demand is fair for the beginning of the week. Indications point to a large increase in the supply before Saturday. Shamrocks are much in evidence. Very fine stock of the yellow narcissus, Emperor, is now reaching the wholesalers. This stock brings $2.50 to $3.50 per 100. The Murillo tulips are also very noticeable and sell well at $3.50 and $4.00 per 100.

FUNERAL OF LOUIS M. NOE.

A number of prominent wholesalers of this city attended the funeral of the late Louis M. Noe at Madison, N. J., March 14. The funeral was very largely attended by the leading citizens of Madison and there were many beautiful floral tributes. Addresses, highly eulogistic of the character and life work of Mr. Noe were delivered.

NOTES.

The Retail Florists' Association of Brooklyn, had its annual dinner and theater party at Raube's on Nevins street and a vaudeville performance at the Orpheum, Tuesday, March 16. The affair was a success. The committee in charge was: Hugo H. Jahn (chairman), Robt. G. Wilson, Frances B. Ross, Elizabeth C. Thinnes.

Attention is called to the announcement of the Fruit Auction Co. in this issue. John P. Cleary, the plant auctioneer for this concern, has recently returned from a tour of the horticultural centers of Europe. The stock that will be offered at these sales can be depended upon to give good value to customers.

In the show windows of J. H. Small & Sons' Broadway store during the past week, an exhibit that attracted much attention was a large vase of Toreador, the vareigated carnation originated by H. Weber & Sons Co., Oakland, Md.

Ex-president Traendly of the S. A. F. started on March 13 for Cincinnati, where we understand he will attend a meeting of the executive committee. He expects to take in the rose show at Buffalo on his return.

Geo. Hildebrandt, head salesman for John Young, who was suddenly stricken on March 6 with an attack of acute indigestion, is, we are glad to say, on the road to recovery.

The death of Louis M. Noe of Madison, N. J., came as a shock to his many friends in this city. Mr. Noe's kindly personality will long be remembered.

Louis Schmutz has three houses of lilies coming on in fine shape and, apperently, just right for Easter.

Visitor: H. A. Barnard, representing Hugh Low & Co., London, Eng., going west.

Retail Florists' Protective Association.

ED. AMERICAN FLORIST:—

Because of the many rumors current in the trade in this vicinity respecting the aims and purposes of the Retail Florists' Protective Association of New York, recently formed, I beg of you the courtesy of a little space in your valuable paper in order to explain some of the main objects of this association.

For a long time retailers of New York have felt that they were in need of co-operation. They are perhaps the only commercial men who have no trade organization to elevate their business, to correct abuses, and to suggest from time to time the means for amelioration. It was these circumstances which called forth the Retail Florists' Protective Association, and which will dictate its policy.

Some people have thought that the association had a grievance because the wholesale or commission men are enforcing short credits. Quite the contrary. We believe that moderately short credits are the best for the retail floral business, and while we would not assume to question any just rule, which any one may make for the conduct of his business, we believe that any rule established should be a just one, and should be impartially enforced.

Again, it has been said, that the association is antagonistic to commission houses. This is entirely erroneous. In a large city like New York, the retail flower business could not be conducted without commission houses, nor could the growers dispose of their superfluous and lower grade stock without the commission man. But this association will ask as emphatically as it can, that the commission man confine himself to his legitimate business; and refrain from competing with his own customers; that he keep out of the retail part of the work and not undermine the retailer, who is, after all, the mainstay of his business. This position is eminently fair and just, reasonable and business-like. It should appeal to the commission man, no less than to the retailer. And we feel sure that the retailers throughout the length and breadth of this land will adopt this position to a man, and that the commission man, once he appreciates the equity and justice of the matter, will freely and voluntarily take the same stand.

We believe it to be the grower's duty as well as his self-interest to discourage competition by commission men in selling at retail. Upon the business of the retailer depends the return to the grower. By injuring and impairing the retailer's business, the grower must and does necessarily suffer. Therefore, the grower, no less than the commission man, is in duty bound to protect those from whom he derives his support and revenue, from unfair competition. This duty should compel the grower and the commission man to take active steps, not to stand by and passively tolerate a practice which strikes at the heart of the trade.

Retailers have suffered much from fraudulent and delinquent customers. We mean to provide against this by a central agency, and shall endeavor to uplift the general trade by a better standardization of prices. By protecting the retailer against bad debts, we feel that we are in turn protecting the wholesaler, the grower and the commission man, and here again it is but fair that the retailer receive in turn that measure of fair protection which will eliminate unjust competition on the part of those with whom he deals.

We hope to secure a better enforcement of the law as to the sale of flowers on the streets by unlicensed venders. The growth of such practices is detrimental not alone to us, but to other men in the trade. We believe that if the growers, the men having large establishments and investments representing many thousands of dollars, were to meet the men who distribute their products to the consumer, and who know the demands and conditions of the trade, it would be of great mutual advantage and productive of highly satisfactory results to both.

There are many other matters which can well be taken up and developed to the betterment of the retail floral business in New York and if the members of the retail branch of this trade will come forward and assist us with their numbers and their counsel, we feel confident that all retailers and their business will be materially improved, and that this improvement will reach over to the grower and the commission man, and that a more harmonious equitable and mutually beneficial condition will prevail in the trade generally.

CHAS. A. DARDS, Pres.

European Horticulture.

FROM THE BRITISH TRADE PAPERS.

NYMPHAEA PYGMAEA HELVOLA.—One of the most delightful of all the smaller water lilies is Nymphæa pygmæa Helvola, a dainty little flower, which appeals to all lovers of the beautiful as they see it floating on a little pool or tank, its prettily shaped leaves and bright little soft yellow flowers fascinating all who see it for the first time, except, it may be, those who are devotees of size in flowers. Only an inch or two across, those of Helvola are almost fairy-like among flowers of its class. This bright little water lily is absolutely hardy, and can be grown in water of a depth of from 12 to 18 inches. A little good loam at the bottom will suit it, and planting may be effected from March until May.

SCENTED BEGONIAS.—There are very few begonias with fragrant flowers, and those that have a distinct odor seem to lose it under the influence of hot sunshine or dry atmosphere. It is in early morning that the fragrance is most noticeable. Begonia Baumanni, introduced from Bolivia about 1866 by Dr. Sace, and first raised from seed by E. N. Bauman, of Bolwiller, was purchased by Lemoine, of Nancy, and distributed by him in 1892. This produces flowers that are more or less fragrant. This has been used for crossing with the double tuberous varieties, and has resulted in a few varieties that possess a little fragrance. But we appear to be a long way yet from garden varieties of tuberous begonias that are decidedly and continuously fragrant.

ARABIS SERRATA.—One of the rarer arabises, which will probably be seen in flower in this country this spring, is Arabis serrata. This is a little known Japanese species, of very close-growing habit, and having small leaves in dense rosettes. The flowers are snow white, and, if equal to the descriptions given, it will be a plant which will be an acquisition to rockeries. It comes from the mountains of Japan.

VERY LITTLE DOING.

The past week has been about the slowest in point of business activity during Lent. The weather was bad for shopping, interfering greatly with this class of trade which, at this season, is so important. Pleasant weather during the early spring is a great help alike to the stores and the street men, particularly the latter, who are not afraid to plunge when favorable conditions prevail and much of the surplus is moved in this way. Prices have softened considerably and great bargains are offered the quantity buyer. In spite of the general tendency American Beauty roses are held very high when salable, and when a bit open are sold in job lots to the fakirs at their price. This certainly seems poor policy. A customer being offered this rose in the store at from $9 to $12 per dozen by his florist and seeing them on the next street corner at 20 cents each or less, must think he is being roasted. It is all right for the dealer to keep the market up when conditions warrant, but he should also be as quick to see the change and arrange his scale to the new level as it is made. Killarney is in great form and some grand flowers are seen. It is firmly set in public favor and it will take a better rose than any now in sight to take its place. Very fine Mrs. Jardine is also offered but the flowers stand in the jars while the Killarneys are almost invariably given the preference. Carnations are up to the top notch in quality but the competition of the low priced roses and the daffodils affects the demand and prices rule low. Sweet peas are great favorites and much excellent stock is seen, all the stores carrying large numbers. Southern daffodils are in and are seen in every street man's stock. $3 to $4 per 1,000 is about the price. Violets are very plentiful and prices rule low; the large singles are the most popular and sell better than the doubles. Quantities of shamrock are seen on every hand.

THE DREER CO.

The Henry A. Dreer Co. is very busy. A visit to their Riverton nurseries will astonish the average man, the extent of the business being tremendous. Orders for spring delivery are coming in larger quantities with almost every mail. Mr. Strohlein says they have more orders booked now for future delivery than ever before. A walk through the houses with that great plantsman, J. D. Eisele, is a treat at any time, such a fund of knowledge and so much to show the visitor who never gets done expressing his admiration for the great stock exposed to view. A specialty is Cocos Weddelliana, great blocks of which are seen in all sizes from plants in seed pots up to single specimens four feet high and made up plants three and four to a pot, all showing great vigor. Mr. Eisele says they are having a great demand for the large specimens of this variety as they grow in favor the more they are seen. What Mr. Eisele calls the palm of the future, Phoenix Roebeleni, is also seen in large quantities, quite a block being in 6-inch pots. He says the Belgians are planting the seed in large quantities and will soon have plants of good size to export. Kentias, whole ranges full, were seen in a splendid assortment of sizes. Latanias, which variety many growers have for the past two years almost discarded, are seen here by the thousands; fine healthy stock.

An interesting feature was the way in which the poor circulation in the hot water pipes in one of the ranges was overcome. A centrifugal pump was placed on top of the bank of boilers and connecting with the main it sent the water around the entire circuit and back to the boiler with only a loss of two degrees, as they had often tested the temperature which on going out registered 150° and on returning 148°. The evenness in the temperature of the house is now most satisfactory, all parts being well heated, and this with quite a saving of coal over the cost of the electricity that was required to run the motor. Outside, the herbaceous stock was being uncovered, hundreds of thousands of pots in sizes from 2 to 4-inch according to the sizes required for the different plants were seen to be in excellent condition, having wintered exceedingly well. Mr. Eisele says, handled in this way they give much better satisfaction than when lifted in clumps from the open ground. Ferns galore are here, millions of them; an immense quantity now go out in flats for florists in all parts of the country to grow on for themselves. There are many other features that will have to be seen to be appreciated and no florist can visit the establishment without receiving inspiration and encouragement to work for greater things.

NOTES.

Pennock Bros. have the premier window. Two large gilt wooden harps rising from baskets of Killarney roses are the main features, while the bottom of the window contains a large number of small oval birch baskets or boxes to which are attached at the back small wooden gilded harps. The harp stands about eight inches above the box which is about two inches wide by four long and filled with shamrock. It is a pretty novelty, one of their own creations, and should sell well.

The Leo Niessen Co. is showing something extra in choice Killarney. They say the lower prices are welcomed by all as buyers take in larger quantities and much stock is moved for special price sales.

A number of the trade are thinking of a winter place in the Isle of Pines because of Robt. Craig's enthusiastic description of that island and its possibilities.

The commission men have their hands full in moving the large stock coming in and say that while it keeps them busy they have had no great surplus as yet.

E. Reid says business is healthy; lots of flowers coming in with a demand that takes them all at his special moving prices.

Wm. McKissick & Bros. are having a run on choice single violets. Their Princess are certainly fine.

Robt. Craig celebrated his sixty-second birthday March 18.

K.

Boston.

TRADE BETTER.

A slight improvement in trade has been noted during the past week. A grand assortment of stock is now being presented. Preparations for Easter are being well studied from all points and this year, more than ever, this celebration is of the utmost importance to flower dealers. No efforts will be spared to grasp the numerous advantages presented during the short time which remains. The general feeling is one of cheerfulness and optimism. A well filled market is running evenly during the freakish demand, each day opening a new outlet or receiving sufficient stock to balance any scarcity prevailing. The rose supply is somewhat limited with Killarney in full sway and further forcing its way into the graces of the public. White Killarney is being cautiously distributed as but a small portion of the demands can be filled. That it easily outshines any white rose yet seen is agreed by all who have received a share. American Beauty is more plentiful although at top figures. A drop in the present scale is looked for the coming week. Richmond is rather freakish and shows no disposition to compare with Killarney at the present writing. A limited quantity of first class carnations is available and prices hold well. Easter lilies, antirrhinums, lilac and numerous other spring specialties are regularly received and find their way to the avenues of consumption with but little forcing. Azaleas of many types; lilacs purple and white; geraniums, genistas, lily of the valley, cyclamens and other stock furnish a splendid display of plants for the spring trade.

NOTES.

The window display to be seen at the Tremont street store of Thomas F. Galvin is unique as well as one of the most attractive of the season's originations. A miniature cottage and surrounding spring garden, perfect in every appointment and arranged with the most artistic skill, draws thousands to this corner every hour of the day. All varieties of spring bulbous flowers are arranged with characteristic taste, and a keen sense of the landscaping effects. An occasional arbor of miniature shrubs helps the arrangement.

The list of prizes subscribed for competition at the exhibition of the Music Hall Market has been increased by the addition of a cup offered by Albert Roper for the best vase of 100 Fair Maid carnations, and another by John Barr for the best vase of 100 Queen. This competition is open to the growers of both markets and should bring out a good display.

W. H. Elliott is at present cutting Killarney roses equal, if not superior, to the best ever grown by him and he is an acknowledged leader of the cultivators of this rose.

Fred Hardy of Natick is handling a line of superb antirrhinums. It is a superior spring novelty and a great favorite with all the buyers.

Visitors: J. J. Karins, Philadelphia, J. S. Dykes, New York.

B.

Massachusetts Horticultural Society.

SPRING FLOWER SHOW.

The annual spring flower show of the Massachusetts Horticultural Society will be held at Horticultural Hall, Boston, Wednesday to Sunday, March 24 to 28. In addition to the usual displays of plants, flowers, fruits, and vegetables, a real Japanese garden with all its accessories will be shown which will be carried out on a scale large enough to allow visitors to walk through it and inspect the various things used in the construction of these famous gardens.

This is a feature never before attempted in this country on so grand a scale. All the materials composing it have been specially imported from Japan; even the trees, shrubs, and flowers being Japanese. Music will be furnished by a ladies' orchestra every afternoon and evening from 3 to 5 and from 7:30 to 9:30 o'clock.

WM. P. RICH, Sec'y.

WEST MANCHESTER, MASS.—C. V. R. Crosby will build an addition to his greenhouse 17x29 feet in dimension.

SARATOGA SPRINGS, N. Y.—Christian Dehn has made a proposition to place flowering plants on all the principal street corners and prominent places, requiring only that the authorities grade the lots. Mr. Dehn has shown much interest in the beautifying of the streets and his latest offer shows him to be a public spirited citizen.

LAKE GENEVA, WIS.—At the last meeting of the Gardeners' and Foremens' Association the election of the officers and board of directors was the chief business. The election resulted as follows: A. J. Smith, president; James Livingston, vice-president; Albert H. Reupke, secretary; Wm. Wahlstedt, treasurer; A. J. Smith, Axel Johnson, Frank Kuehne, Wm. P. Longland, James Livingston, Wm. Wahlstedt, Robt. Sampson, Miles Barrett and Albert H. Reupke, directors.

McCALLUM CO., Inc. Pittsburg

Worcester, Mass.

The first exhibition of the season of the Worcester County Horticultural Society was held in Horticultural Hall March 4. It was far ahead of the exhibition of last year both in quality and quantity of flowers and plants shown, and the attendance was very good considering the weather. The features of the exhibition were two tables of orchids from Mrs. John C. Whitin's and Mrs. Marston Whitin of Whitinsville and Lange's roses; L. C. Midgley also had a table of roses and carnations that was much admired. Mrs. Thomas Pollard displayed a Merry Widow hat that was made of moss, berries and trimmed with Enchantress carnations that was much admired. The awards were as follows:

Cut flowers.—E. W. Breed, first; H. F. A. Lange, second; Allyne W. Hixon, third.

Carnations.—H. F. A. Lange, first; L. C. Midgley, second; H. A. Cook, third; Mrs. John C. Whitin, fourth.

Orchids.—Mrs. J. C. Whitin, first.

Azalea Indica, one plant.—H. F. A. Lange, first; E. W. Breed, second.

Azalea Indica, three plants.—E. W. Breed, first; H. F. A. Lange, second.

Begonia Gloire de Lorraine.—H. F. A. Lange, first.

Cineraria.—E. W. Breed, first.

Cyclamens, four plants.—H. F. A. Lange, first; E. W. Breed, second.

Cyclamen, one plant.—H. F. A. Lange, first; E. W. Breed, second.

Hyacinths.—E. W. Breed, first; H. F. A. Lange, second.

Primula Sinensis.—H. F. A. Lange, first; E. W. Breed, second.

Primula, any other variety.—H. F. A. Lange, first; E. W. Breed, second.

Gratuities.—H. F. A. Lange, roses; E. W. Breed, schizanthus; L. C. Midgley, roses and carnations; H. F. A. Lange, tulips; Geo. McWilliam, display of orchids; H. F. A. Lange, Baby Dorothy roses; Mrs. Thomas Pollard, English wallflowers.

Chas. W. Wood gave a very interesting and instructive lecture at the Society's meeting on "Rambles Through the Middle West." The speakers for next meeting are Hal. B. Fullerton and Mrs. Fullerton of Huntington, L. I. Mr. Fullerton will speak on "The Lure of the Land." Mrs. Fullerton's subject will be announced later. Both are considered exceptionally good speakers and their coming is anticipated with much pleasure.

The Seed Trade.

American Seed Trade Association.
Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

COUNTER TRADE is about up to last year.

W. GRIESINGER, Ghent, Belgium, sailed from New York, March 13.

LEM W. BOWEN of D. M. Ferry & Co., Detroit, Mich., is in California.

J. C. VAUGHAN, Chicago, and Mrs. Vaughan spent the week end at Atlantic City, N. J.

SWEET PEAS, moonvine, asters and nasturtiums are among the lively pick-up items from catalogue houses.

IN the grass seed line, red clover is a little easier; alsike, white clover and alfalfa, fancy grades, are firm.

AN important resolution upon the tariff, passed at a joint meeting of committees representing the various trade organizations, is noted on page 378.

THE mail order business in the west is reported a little dull owing to the cold weather. The last few days, however, have shown considerable improvement.

THE amount of cucumber and onion seed now offered in surplus lists, shows many were needlessly frightened about their supplies in these classes of vegetables last fall.

HOUSE BILL No. 396, introduced to the New Hampshire legislature by Mr. Marden of Chichester "to regulate the sale of agricultural seeds" was signed by the governor, March 10.

VISITED BUFFALO.—Kirby H. White, Detroit, Mich.; F. R. Pierson, Tarrytown, N. Y.; Chas. H. Vick, Rochester, N. Y.; J. D. Eisele, Philadelphia, Pa.; J. C. Vaughan, Chicago.

CHICAGO.—The last few days has seen a sharp upturn in the price of onion sets. Wednesday's prices were rather firm,—around $1.75 for reds, and yellows, and $2.75 to $3 for whites.—Visitor: Henry Nungesser, New York.

PHILADELPHIA, PA.—Burpee's 230 employes tell the tale.—Michell is very busy with counter trade at the old store.—Skidelsky & Irwin report business good.—Dreer's departure in catalogue cultural instructions has increased trade. Visitor: E. S. Miller, Wading River, N. Y.

NEW YORK.—The counters of the down-town districts begin to show the presence of buyers in liberal numbers and heavy truck loads are moving out.—Eastern mail order houses expect their "big Monday," of the season March 22.—J. C. Vaughan, who came on to attend the funeral of E. V. Hallock, remained throughout the past week with headquarters at his Barclay street store. He said he hoped to be able to visit the rose show at Buffalo on his return trip. Other Visitors: John A. Ruppert of Henry A. Dreer, Inc., Philadelphia, Pa.; Thos. J. Grey and P. M. Miller of Thos. J. Grey & Co., Boston, Mass.

Grass Seeds.

ED. AMERICAN FLORIST:—

Replying to the letter, which Albert McCullough of J. M. McCullough's Sons Co., Cincinnati, O., addressed to you regarding my notice about the inaccuracy of American blue grass dealers, I beg to refer all firms interested in this matter to an article which appeared in the Grain Dealers' Journal under date of February 10, page 178, in which Professor Galloway, chief of the Bureau of Plant Industry at Washington, D. C. says: "Badly adulterated Kentucky blue grass seed and orchard grass seed are still offered in the market in considerable quantity etc." I think this is the best proof for my remarks!

I have been many years in the seed trade and am well aware of the manner of doing business in the United States; I know there are reliable dealers and am glad to say I have my regular suppliers of the different sorts I am importing from your side; but, to my regret, I have also to state that there are many others, who do not mind supplying the European seedsmen old or mixed seed as pure new crop. This refers especially to Kentucky blue grass, of which there are still large stocks of the crops 1905 and 1906 in the hands of some dealers.

Mr. McCullough is mistaken, in saying that the European importers do not look upon the quality of the seed they buy, but only upon the lowest price; this is not at all the fact. My first principle is always to buy the best obtainable seed, guaranteed new crop and of reliable germination. I have to guarantee the percentages of purity and germination to my clients and therefore must obtain the best possible seed, when filling my requirements. To my regret, I have to state, that the American dealers do not give any guarantee as to their deliveries and that they cannot yet see their way to give a certain percentage of germination, but perhaps later on they will do so, especially as many European seedsmen are now making arrangements to avoid incorrect deliveries, as those of the last few years, when Kentucky dealers supplied old or mixed Kentucky blue grass seed under the name of guaranteed new crop.

I have made many tests with new crop Kentucky blue grass and could ascertain that the pure new seed this fall has shown a germination of at least 80 per cent, so that a germination of 80 per cent can easily be taken as the average of the crop 1908. Some dealers, from which I and other German dealers bought a few carloads, have sent samples of the bulk showing a germination of more than 80 per cent and later on the delivery had only a percentage of less than 50 per cent. This happened the last three years. Many of the European seedsmen have had such experiences and they all agree with me, that the trade with the United States dealers is very difficult and that arrangements must be made to receive correct deliveries in regard to quality, viz., germination and purity, corresponding with the sale samples and the bulk samples.

CONRAD APPEL.
Darmstadt, Germany, February 25, 1909.

Proposed New York Seed Law.

We give below the text of a proposed law which was introduced February 22, in the New York legislature. This bill originated with the commissioner of agriculture and was introduced by a Mr. Callan of Columbia county. Some seedsmen have called our attention to various parts of the bill which they describe as decidedly objectionable and we would be glad to have the comments of other readers after careful perusal:

An Act to amend the agricultural law entitled "An Act in Relation to Agriculture Constituting Chapter 1 of the Consolidated Laws" in relation to inspection and sale of seeds.

The people of the state of New York, represented in senate and assembly, do enact as follows:

1. Chapter nine of the laws of 1909 entitled "An Act in Relation to Agriculture, Constituting Chapter One of the Consolidated Laws," is hereby amended by adding at the end thereof a new article to be known as article 16 to read as follows:

ARTICLE XVI.

Inspection and Sale of Seeds.

360. No person shall sell, offer, expose or have in his possession for sale for the purposes of seeding, any seeds of cereals, grasses, clovers or forage plants in quantities exceeding one pound unless every receptacle, package, sack or bag containing such seeds, or a label securely attached thereto, is marked in a plain indelible manner as follows:

(a) With the full name and address of the seller.

(b) With the name of the kind or kinds of seeds.

(c) The percent of purity of the sample.

(d) With the common name or names of the weeds, the seeds of which, if any, are present in the seed sold, offered, exposed or held in possession for sale.

For the purpose of this act such seed so offered or exposed for sale shall be deemed to be free from prohibited seeds if they do not exist in greater porportion than five of any kind to 1,000 of the seed being sold, offered, exposed or held in possession for sale.

The provisions of this act shall not apply to any person selling seeds direct to merchants to be cleaned or graded before being offered for sale for the purposes of seeding, nor to seed that is held in storage for the purpose of being recleaned and which has not been offered, exposed or held in possession for sale for the purpose of seeding, nor to seed marked "Not absolutely clean" and held or sold for export only.

2. This act shall take effect immediately.

Improved Teneriffe Onion Seed
Generally called Bermuda. These seeds can only be obtained in the U. S. through seedsmen and dealers, and not through growers' associations.
Varela's Improved Onion Seeds will give best satisfaction to growers. Insist on getting them It will pay you.
Federico C. Varela, Teneriffe, Canary Islands

150 miles northeast of Pitcairn island, and 300 miles east of Gambier islands, which are in the Tahiti consular district. According to one of the two men who discovered the phosphate, Henderson is an elevated island, several times as large as Makatea, which has an area of some 10 square miles. The preliminary investigations made on various parts of the island show that there are large deposits of phosphate thereon. It outcrops on the land and was found at several places to extend to a depth of six feet, which was as low as the examination was made. Specimens analyzed show that some of the phosphate at least is of a high grade. Of the other two islands, Ducie is elevated and it is quite probable that deposits of phosphate will be discovered on it. My informant has sent his report and many specimens of the phosphate to London. He informs me that a thorough survey and examination of Henderson will soon be made."

Imports.

During the week ending March 13 imports were received at New York as follows:

McHutchison & Co., 52 cases plants, three cases gooseberry trees.

H. F. Darrow, 26 pkgs. 20 cases plants.

C. C. Abel & Co., 27 pkgs. plants.

A. Rolker & Sons, 11 cases plants.

Stumpp & Walter Co., one case trees.

S. C. Moon, three crates trees.

Hy. Nungesser & Co., 300 pkgs. seed.

Peter Henderson & Co., 20 pkgs. seed.

J. M. Thorburn & Co., five pkgs. two bags seed.

W. H. Stenger & Co., eight pkgs. lily of the valley pips.

To others 75 pkgs., 49 cases plants. 400 pkgs., 250 bags clover seed, 690 bags seed.

The Last Crop of Lettuce.

To lettuce growers the last crop is often by no means the least. Many times it is the most profitable one of the forcing season. Generally it grows the quickest of any and finds a good market. However, it is in the spring months when we find the poorest quality, long, soft and lifeless, covered, as a rule, with green fly. There is no need of this if we watch a few main points, such as plenty of water at the roots. When the spring sun is up and the temperature is high, with a good wind, water is evaporated surprisingly fast, and, unless the grower watches closely, dry roots result. We cannot prevent the day temperature going ahead of our mark, at times, but we can make up at night, and as long as the nights are cool, good lettuce can be grown.

Many operators shut down the ventilators at quitting time, no matter what the weather. The proper course is to give lettuce all the air possible, all night, as long as the outside temperature stays up to 50°. This night ventilation braces up the crop and minimizes the effects of hot days. Another factor is plant food. After a season's cropping the soil may be low on available nitrogen in which case nitrate of soda is a great help. We have in operation a course of experiments of spraying on nitrate of soda, and, so far, results have been excellent. A small amount of nitrate of soda on the foliage, will absorb moisture from the air, and thus protect the plant from dry air and hot sun, and when washed down to the roots the distribution is uniform, and the dose very mild. We simply use a knapsack sprayer, and apply at the rate of ½ to one ounce per gallon of water, every few days. It certainly helps to produce that crispness so much desired, while the method is both cheap and effective. MARKETMAN.

To Grow Sweet Potato Plants.

Prepare a hotbed by using fresh manure from the horse barns. Add about one-third to one-half straw or bedding material and mix thoroughly. This mixture should be packed in the bed to a depth of 12 to 18 inches. A convenient width for hotbeds is six feet; they can then be made as long as desired. The mixture should then be thoroughly moistened but not made wet; too much water will retard the heating process caused by the fermentation of the manure. Let this mixture stand in the bed for three or four days, by which time it will have reached its highest degree of heat. At this time the bed should be carefully examined to see that there are no dry spots. The mixture should be kept well moistened. The frames that are to support the covering of the bed should then be placed on top of the bed of manure with the slope of the top to the south. Two or three inches of soil should be spread over the mixture and the sweet potatoes carefully placed on the surface and covered with an additional layer of soil to a depth of two or three inches. Sandy soil is best for this purpose. Keep this soil moist throughout the entire period of plant growth.

The potatoes should be carefully distributed over the bed and no two potatoes should lie against each other, but they need not be more than one-half inch apart. The potatoes that are more than 2½ or 3 inches in diameter should be split lengthwise, and the cut surface placed down in the bed; smaller potatoes may be placed in the bed whole. The potatoes should be placed in the bed about six weeks before the first plants are to be transplanted to the open field. If care is exercised in pulling the plants, a second crop of plants will be produced in about two weeks, and a third and much lighter crop will be produced about two weeks later, during which time a good bed will produce from 100 to 150 plants per square foot.

The plants should not be placed in the open field until the soil is quite warm and all danger of frost is passed. In the central part of Oklahoma transplanting can be done in May, while in the southern part of the state it can frequently be done with safety during the latter part of April. In the northern part of the state transplanting should be done after the middle of May.—Oklahoma Press Bulletin.

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points March 13 were as follows: New York, cucumbers, 75 cents to $2.25 per dozen; lettuce, $1.25 to $1.50 per strap; mushrooms, 20 cents to 50 cents per pound; mint, 40 cents to 50 cents per dozen bunches; radishes, $2 to $3.50 per 100 bunches; rhubarb, 30 cents to 60 cents per dozen bunches; tomatoes, 15 cents to 35 cents per pound. Cincinnati, cucumbers, $2 to $2.25 per dozen; mushrooms, 40 to 45 cents per pound. Boston, cucumbers, $12 to $15 per box. Chicago, cucumbers, $1.50 to $3 per dozen; lettuce, $3 to $3.50 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 15 to 25 cents per pound; radishes, 40 to 60 cents per dozen bunches; asparagus, $2.75 to $7 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.75 per pound; peppers, 40 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound, extra fancy, 14 cents; French endives, 25 to 40 cents per pound.

WASHINGTON, D. C.—In 1905 Capt. John Donnell Smith of Baltimore, presented to the Smithsonian Institute his herbarium and botanical library, perhaps the most valuable private botanical collection in this country. The herbarium consists of more than 100,000 mounted plants and the library of 1,600 superbly bound volumes. This gift was made with the understanding that the books and such part of the collection as was needed by Capt. Smith should remain in Baltimore. At that time, however, some 30,000 specimens were sent to the Smithsonian. He has now sent his entire fern collection, consisting of more than 7,000 sheets. This collection will be of great aid in certain research work now being carried on.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-Presdent; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

AN important resolution upon the tariff, passed at a joint meeting of committees representing the various trade organizations, is noted on page 378.

MILWAUKEE, WIS.—A municipal nursery will be started here by the park board in Sherman park. About 150,000 plants will be purchased with the appropriation of $2,000 made for the purpose.

UNDER a new interpretation of the law of 1905, the Department of Agriculture has notified the railroads that they will not be allowed to move importations of nursery stock from Europe, and elsewhere, without a health certificate, endorsed by the American consul at the port of shipment. A fine for any violation of this ruling is $5,000.

THE warning now being sent out to Wisconsin nurserymen by Prof. E. P. Sandsten as state nursery inspector, reads: "I request that you notify me of any shipment from foreign countries, especially France and Holland, so that I may take steps to inspect these before they are disseminated or planted. Notify me on receipt of such goods, and I will take the first train to your place to examine them. Do not open the box or package until I arrive. It is vitally important that this request be complied with." The brown-tail moth is the insect most feared.

THE executive committee of the American Association of Park Superintendents met at Buffalo, N. Y., March 17 at the Genessee hotel. The following members were present: President Duncan of Boston, Mass.; Secretary Mulford of Harrisburg, Pa.; — Williams of Erie, Pa.; E. H. Perry of Niagara Falls; — Donaldson and John F. Cowell of Buffalo, N. Y. The usual routine work of the association was gone through, and the arrangements for the annual meeting at Seattle, Wash., Aug. 9, 10, 11 and 12. Plans are being made for an excursion of the eastern members via Yellowstone Park. The programme as arranged provides some good solid pieces de resistance for the business meetings and a good opportunity to examine the park improvements of the northwest.

Planting Outdoor Roses.

In the milder localities and favored spots in colder districts fall planting (November) of roses proves successful and is much practiced but there are many places where the plants have to be held over winter in the cellar and planted early in the year, and the best time to plant is just as soon as the frost is out of the soil and it can be got into a good friable condition. Nothing is gained by attempting to plant or to prepare soil when it is wet and "greasy" owing to the frost being only partly out of it. This makes it work badly for months after and is a hindrance, not a help. Very often the plants are cut back sufficiently when received and require no further pruning, but if they have long, straggling shoots it is both an aid to the roots and an improvement to the appearance of the beds or borders after planting to cut them back a little.

Pruning is a relative term and the style that is applicable to one variety is not good for all. Take the case of the hybrid perpetuals. We would not prune such a strong grower as Paul Neron, for instance, as close back as we would General Jacquimenot or Alfred Colomb, but would leave a foot or so of growth on the former and cut the weaker growers back to say half that length. Then some of the ramblers may have good, well ripened growths on them that may be expected to keep plump and flower and to remove this growth would be to cut away flowers that may be wanted later. Not that it is policy always to allow newly planted stock to flower freely the first year. The plants have to make a good rooting system and establish themselves in their new quarters and it is folly to expect them to do this in the short time before hot weather, as well as carry a full crop of flowers. The future of the plant is of more importance than a few flowers the first season, while the late summer flowering upon the new growths of some of these varieties will more than compensate for the loss of a few early ones.

Should the plants be at all dry at the root let them be thoroughly soaked before planting to plump up the eyes and roots. Any of the latter that are bruised or broken must be cut back to solid portions with a keen knife at the same time the heads are pruned, just before planting. As a rule the plants can be set at the same depth they were growing in the nursery, the soil line being easily seen. But in any case it is necessary to bury the point of union between stock and scion, the place where the bud was inserted or the graft made being easily seen. Whether the rose roots that spring from above the joint are useful to the plant or not the exposure to the air of the point of union is a frequent cause of canker and kindred evils. It also, according to our experience, tends to a more equal swelling of the rose growth and the manetti or whatever stock the plants are worked on if the point of union is well covered.

An experienced rose grower recently expressed his surprise that the hybrid tea roses are not more grown outdoors instead of so many of the hybrid perpetuals. A cynic once said these latter roses were so called because they were not perpetual flowering. At any rate the hybrid teas are far better for producing a display over a long season, though the hybrid perpetuals are doubtless very showy at their best. Among the hybrid teas that are equally hardy as those with which we compare them are: Caroline Testout, a beautiful bright satiny rose of fine form and exquisite fragrance: Clothilde Soupert (hybrid polyantha) and its climbing form, white with rosy center, much larger than the majority of its class and of excellent form; Gruss an Teplitz, a very bright crimson and one of the finest bedding roses in existence; La France, an old but charming rose and distinct from all others in its bright, rosy pink color; Liberty, well known as a bright red forcing rose, but not nearly enough grown outside and possibly the brightest red variety in existence; Richmond, very similar to the last named but even a better grower; Mrs. W. J. Grant, a lovely pink, delicately perfumed and a superb rose all around; Reine Marie Henriette, a deep red climber, and Trier, a

POLYANTHA ROSE CLIMBING CLOTHILDE SOUPERT.

fine white rose of German origin. Two new varieties that are bound to come to the front as good, showy, outdoor roses are President Taft, a German rose—a cross between Gruss an Teplitz and Cramosie Brilliante—and Gruss an Zubern, a fine white. These notes on the varieties must, however, only be taken as suggestive; there are many others of great merit that may be added where a larger collection is needed.

The operation of planting dormant roses is too simple to need a lengthy description. As noted above the soil should be in a good condition and another point worth noting is to spread the roots out well and see that some fine soil is placed around them and well firmed before finishing the top soil, which should be loose. After raking the surface smooth, leaving the soil porous so that the rain and air has access to the roots, a light covering of litter is an advantage. Protection, as usually understood, is not needed. The roses as they come from the cellar are somewhat tender and the drying effect of cold winds after planting is felt both by the roots and head. Again in a dry spring the loose surface and the thin mulch of litter helps to conserve the moisture and keeps the sun from drying and cracking the surface and is well worth while. A bed or block of one variety needs only one label, of course, but where a collection is grown in mixture, careful labeling at planting time is essential as much of the interest is lost if the correct names of the varieties are not known.

COMMERCIAL.

Examination for City Forester.

Chicago, March 12, 1909.—The civil service commission of Chicago will hold an entrance examination for city forester at 117 Market street, Official service, Division miscellaneous, on March 29, 1909, at 9 a. m. Applicants for this examination must have a practical as well as a theoretical knowledge of the science of sylviculture. The scope of the examination will be: Technical knowledge, composition and experience,—with weight for each subject as fixed by minutes of March 12. Local residence will be waived under Section 3 of Rule III. Those desiring to take the above examination must file application with the civil service commission, 405 City hall, before 12 o'clock noon of Saturday, March 27, 1909.

By order of the Commission.

PERCY B. COFFIN, Sec'y.

Pruning Altheas.

ED. AMERICAN FLORIST:—

Please tell me through the columns of the AMERICAN FLORIST how to prune althæas. CONN.

By althæas I presume "Conn." means the shrubby hardy species known botanically as Hibiscus Syriacus and often called Rose of Sharon. These shrubs flower from the new wood of the season's growth and hence they may be pruned in spring to almost any extent. When formal effects are desired they are very severely cut back before they start in spring and the result is a perfect ball or pyramid of bloom in early autumn. Ordinarily they need little pruning except to remove imperfectly ripened tips of branches and cut out superflous or interfering shoots. When a tree form is desired, the young plants in the nursery rows may be cut back to within an inch or two of the ground and only one shoot be allowed to grow to form the future stem. This plant is often used for hedges and sheared into shape annually. The tender species H. Rosa-Sinensis, grown as a pot plant in conservatories or for bedding out in summer, is better if severely cut back while dormant or before the plants start into growth for the summer.

JOHN F. COWELL.

LEGAL NOTES.

Claim for Discount.

At the Redhill county court February 3, William Wells & Co., chrysanthemum growers, Merstham, sued William Sydenham, of Tamworth, nurseryman, for £4 3s. 4d. for chrysanthemums supplied. Defendant counterclaimed for £7 10s. agreed trade discount in respect of such chrysanthemums, and £3 6s. 8d., the difference between the actual amount due for plaintiff's account and amount paid to plaintiffs generally on trading account.

Mr. Wells said he had for some years supplied the defendant with ordinary chrysanthemums, and allowed him the usual trade discount, but had refused to supply him with the novelties, as on a previous occasion defendant ordered 12 Goacher's Crimson, 1902, but before he was supplied it was found that he had put them in his catalogue at 6d. (12 cents) less than he himself was offering them. When it was found out that he had been cutting prices the plaintiffs refused to supply him. In each succeeding year defendant had made application for the novelties, but he refused to supply them until he agreed to ask the same prices as the plaintiffs in the second year. On November 15, 1906, defendant ordered certain chrysanthemums from the catalogue, and plaintiff told him he would be supplied at a discount. On December 4 the plaintiffs issued a fresh circular, making a considerable reduction in the price of their early singles, and on December 8, 1906, defendant wrote on the strength of this circular, ordering 10 of each of their early singles. In the circular, in notifying the reduction the plaintiffs stated that no trade reduction would be allowed. The goods were supplied and the account delivered, to which the defendant took no exception, but on October 11, 1907, he sent £20 on account, and did not in any way claim a discount. He first raised a question about discount on December 18, 1907. Mr. Hooper contended that the defendant had always been and was entitled to the usual discount. His honor gave judgment for the plaintiffs on the claim and counterclaim. —Gardeners' Chronicle.

Trade Name Dispute.

The action brought by Alex. Dickson & Sons, Ltd., Royal Irish Nurseries, Newtonards, County Down, seedsmen, nurserymen and florists, claiming an injunction to restrain the defendants, Alex. Dickson, Jos. Dickson and Alex. Dickson, Jr., from selling any roses or seeds not grown or propagated by the plaintiffs as "Dickson's" or from carrying on the business of nurserymen or seedsmen under the name of "Alex. Dickson & Sons" or "Alexander Dickson & Sons" has been finaly settled by the court of appeal.

The lord chancellor, in giving judgment, said that the plaintiffs for over half a century traded under the name of Alex. Dickson & Sons. They carried on business as horticulturists, principally in Newtonards, but also at Ledbury, in Herefordshire, Eng., and they had a seed business in Royal avenue, Belfast. On December 5, 1900, they were incorporated under the name of Alex. Dickson & Sons, Ltd. In 1901, they opened a shop in Dawson street, Dublin, and in 1906 they bought a tract of 17 acres at Blackrock and established a nursery there. They had a valuable trade name. The defendant came to Dublin about 1875, and he opened a shop in Capel street some 12 years ago under the name of the Ashbourne Agricultural Co., and he also put the name "Alex. Dickson" on the sign board. He carried on the seed business but did not raise or grow roses.

After the plaintiffs opened the shop in Dawson street it occurred to the defendant that it would be desirable to go into the nursery business in order to compete with his new Dublin rivals, and, accordingly, in 1905, he bought for £1,000, the site of a nursery at Woodlawn, Dundrum, which he subsequently called the "Home of the Rose." All this was perfectly legitimate; but in February, 1907, there was a tender for seeds advertised by the Department of Agriculture, and plaintiffs and defendants both competed for it. The plaintiffs got the contract, and immediately the defendant advertised himself as Alex. Dickson & Sons, Woodlawn Nurseries, Dundrum. Thus the defendant literally adopted the old and valued trade name of the plaintiffs expressly for the same business which had made the name famous, and the question which the court had to consider was whether this act was lawful. The master of the rolls had granted an injunction against its use. Upon the whole

CHRYSANTHEMUMS

Now is the time to procure stock for **EXHIBITION BLOOMS.**
Here is an opportunity for those who contemplate competing at the Shows or intend making a display on their own account.

SPECIAL OFFER.

To make room **we have cut the price in half** of the following 1909 Novelties:

Wells-Pocket— G. W. Pook, Rose Pockett, Mrs. Chas. H. Totty, Frank Payne, Merstham Blush, Leslie Morrison.

case, he was of opinion that the judgment of the master of rolls was right, and that the appeal must be dismissed, the costs to be paid by the appellants.

Lord Justice FitzGibbon and Lord Justice Holmes concurred, accordingly the appeal was dismissed with costs, but the form of the injunction was altered restraining the defendant from carrying on the business of nurserymen or seedsmen either in the name of Alexander Dickson & Sons or Alex. Dickson & Sons, or in any name or any manner so as to mislead or deceive the public.—Gardeners' Chronicle.

REDLANDS, CALIF.—Sidney Hockridge will at once begin the erection of three large greenhouses for flowers and vegetables. He will spend about $10,000 on his plant.

FROM THE FRENCH TRADE PAPERS.

BOUGAINVILLEAS IN THE OPEN AIR.—According to A. Nonin, the bougainvillea lends itself easily to garden decoration. Planted outdoors in a sunny location about the end of May, it thrives and produces its beautiful and showy bracts for several months. A comparatively new variety, B. Cypheri, is remarkable for its bright coloring and the large size of its pseudo-flowers. After blooming in the open air in summer, the plants may be rested until April, when they will bloom freely in the greenhouse.

ROSE MARQUISE DE SINETY.—This hybrid tea, introduced by M. Pernet-Ducher in 1907, received the gold medal offered by the city of Paris in that year. The plant is vigorous and bushy, foliage bronzy green, very free-blooming. The buds are well shaped, flowers large, cup-shaped, very double. Their color is at first an ochre yellow shaded brownish yellow, passing to nearly a vermilion. It is excellent for outdoor planting, and a great future is promised for it.

A NEW double yellow tree peony has been obtained in France, the single existing plant having bloomed for the first time in May, 1908. It forms a little bush, 20 inches high with strong wood, foliage glaucous below, deep green above. The buds were carmine tinted, on long slender stems; the flowers were very heavy, 6-7 inches in diameter, and had to be supported on account of their great weight. The color is a deep mixture of scarlet and yellow.

THE congress of the Federation of Horticultural Societies of France last July considered the following topics: "The Betterment of Transportation;" "The Certificate of Origin;" "The Interdiction of the San Jose Scale;" 'Please Omit Flowers;" "Dealers' Catalogues;" "Unfair Competition;" "Raising of Nursery Prices;" "Raising of Florists' Prices."

Ashes As A Fertilizer.

The question often arises as to the value of ashes for fertilizer. Prof. Ten Eyck of the Kansas Experiment Station says that an average sample of unleached wood ashes contains about 7 per cent of potash, and 2 per cent of phosphoric acid, which at current prices of these plant foods would make the ashes worth about $9 per ton. Besides the actual fertilizing value, by reason of the potash and phosphoric acid contained, there is some value to ashes simply by the power which the potash has to make the nitrogen of the soil available for plant use by its chemical action upon the organic matter and humus of the soil. The potash in ashes exists in a readily soluble form and is thus immediately available for plant food. The grower can well afford to pay $8 to $10 a ton for good wood ashes. Coal ashes are of little value as far as plant food is concerned, but they can be used with good effect upon some soils in loosening them up.

Ashes can be used for any crops that need potash and they may be applied at the rate of 25 to 50 bushels per acre. For cultivated crops they should be applied broadcast after the land has been harrowed and then cultivated in by a light harrowing. They can be used also as a top dressing in connection with phosphate fertilizers. As will be noticed, Prof. Ten Eyck says that the unleached ashes are worth $9 per ton. As a matter of fact the leached ashes rarely have a value of more than $1 or $2 per ton, as the potash and phosphoric acid are washed out. If ashes are to be used they should be put in a dry place until ready to use, as much or more care being taken with them as with barnyard manure. And in this connection it might be well to state that ashes should never be mixed with manure of any sort as it sets the nitrogen free in the form of ammonia gas, and the quality of both the ashes and the manure is lowered. Sifted coal ashes, however, can be used for that purpose, as they absorb liquids readily and, because of the small amount of potash they contain, do not liberate nitrogen. It would be a good plan for those who have soils that need potash to collect all the wood ashes they can and use them for fertilizer.

GERANIUMS.

We have an immense stock of fine plants from 2-in. pots for immediate shipment, at prices running from $2.00 per 100 up to 50c. each. We will send 1000 50 each of 20 good sorts, our selection, for $18.50. Our Special Geranium Catalogue describes upwards of 250 varieties.

The New Crested SCOTTII FERN... NEPHROLEPIS SCHOLZELI

NEPHROLEPIS SCHOLZELI

This crested sport of Scottii will hold the same position to all the crested forms of Nephrolepis that Scottii now holds to the Boston. It is entirely distinct from all others and will become even more popular than its parent, with which it is identical in every way except that the pinnæ are subdivided, giving it a beautiful crested appearance.

We have shown the plant at the exhibitions noted below and have been awarded the following honors:

SHAW GOLD MEDAL, St. Louis Horticultural Society, Nov. 3rd, 1908, for "Best plant of decided merit for cultivation, not previously an article of North American commerce."

SILVER MEDAL, Offered by the Society of American Florists, through the St. Louis Horticultural Society, Nov. 3rd, 1908, for "The most meritorious plant or flower of American origin".

CERTIFICATE OF MERIT of the Horticultural Society of St. Louis, Nov. 3rd, 1908.

SILVER MEDAL, Pennsylvania Horticultural Society, Philadelphia Nov 3rd, 1908, for the best new plant.

CERTIFICATE OF MERIT, Massachusetts Horticultural Society, Boston, Nov. 6th 1908.

CERTIFICATE OF MERIT, Dutchess County Horticultural Society, Poughkeepsie, N. Y., Oct. 30th, 1908.

CERTIFICATE OF MERIT, Morris County Gardeners and Florists' Society, Madison, N. J., Oct. 30th, 1908.

CERTIFICATE OF MERIT, Chestnut Hill Horticultural Society Philadelphia, Pa., Nov. 4th, 1908.

We are booking orders now, which will be filled in strict rotation June 1st, 1909.

PRICE: **Per doz., $3 50; per 100, $25.00; per 1000, $200.00. Twenty-five supplied at hundred rate and five hundred at thousand rate.**

HENRY A. DREER, 714 CHESTNUT STREET PHILADELPHIA, PA.

Pittsburg.

BUSINESS BETTER.

We are still feeling the effects of Lent but as flowers were not so plentiful last week, business on the whole is better. Bulb stock of all kinds is very plentiful. At both the downtown and north side markets very fine tulips are selling at the country people's stands for 35 cents per dozen.

St. Patrick's day created the usual strong demand for white carnations which were not over plentiful to begin with. Roses are moving nicely with increased quantities coming in.

NOTES.

The Florists' and Gardeners' Club met March 2 with an exhibition of bulb stock. Fred Wiesenbauch took the Beckert prize for best pan of tulips which curiously enough was grown in the cellar. N. C. Madsen, Sewickley, got a cultural certificate for cyclamens which every one thought were the best ever shown at the club meetings. H. C. Buchler, of the South View Floral Co., showed a vase of Rose Pink Enchantress carnations which had been cut for three days. Mr. Buchler believes his strain of this variety has not the sleepy qualities generally credited to it, and for this purpose displayed them. Foreman Jones of the Phipps conservatories had his usual grand display; it is a pity that park flowers cannot compete for prizes, as Mr. Jones would certainly have a good many to his credit. He called attention to one well done tulip, Prince of Austria, which is a favorite with him.

The carnation convention for next year was fully discussed, principally the meeting place. It was finally decided to leave it in a committee's hands who will report the place selected at next meeting. Plans were also discussed on ways to increase the membership. Some members, however, stated that it would be a wise policy to make the meetings more interesting to those who are already members and then it would be no trouble to get new ones.

Among the wholesalers, the strong features would probably be: Orchids and gardenias at The McCallum Co. Lilies at the Pittsburg Cut Glower Co. American Beauty roses at the Florists' Exchange and some fine tulips at J. B. Murdoch & Co.

Randolph & McClements, in their Pennsylvania avenue store showed a very handsome window decoration, in the way of a set table graced with yellow snapdragon, primroses and orchids.

L. I. Neff has announced that he will open a cut flower and plant auction March 17 in Bellevue.

J.

CLEVELAND, O.—G. M. Naumann who has greenhouses at 1632 East One Hundred and Fifth street, has opened a retail branch at One Hundred and Fifth street and Superior avenue. The interior and exterior of this new flower store looks very attractive and with Willy Naumann in charge, it is believed the new enterprise will be a success.

BYER BROS., Chambersburg, Pa.

HEADQUARTERS FOR

ARAUCARIAS

"By jingo," was the remark of a bright looking gentleman as he stepped with his lady friend into one of our Araucaria houses. "If these are not the best shaped and finest looking specimens of **Araucaria Robusta Compacta, Glauca** and **Excelsa** I have ever seen, *then I am a shade.* ☞ Just look! What a sight this time of the year, one as nice as the other!"

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen. As big as an elephant, for 75c; as big as a jumbo for $1.00; and as big as a holy terror, for $1 25 to $1.50.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-7-8 in. pots, 4-5 year old, 4-5-6 tiers, 20-25-30-32 in. high, same in width, $1.50 $1.75, $2.00, $2.50 to $3 00 each.

Araucaria Excelsa, 3-4-5 year old 4-5-6-7 tiers 6-in. pots, 20-25 30-35 in. high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

FROM THE GERMAN TRADE PAPERS.

PRIMULA KEWENSIS.—Of plants very much spoken of at present and discussed by matter of fact practitioners and scientists alike Primula Kewensis is not the least interesting. It is a winter flowering primrose that sprang into existence more than 10 years ago at Kew as a chance seedling of P. floribunda, accidentally fertilized by P. verticillata, and, owing to its strikingly unique combination of characteristics, not attributable to either parent, at once compelled widespread attention. For years it could only be perpetuated by dividing the older plants which obstinately refused to bear seeds. Now, however, seeds, claimed to come uniformly true, are listed in an Erfurt seed catalogue. Kewensis bears clear yellow flowers in great profusion from January until May, and, if sown late, until away into summer. The foliage is very large and of a deep green color, and the plants in habit of growth and cultural requirements are said to somewhat resemble P. obconica.

CHRYSANTHEMUM CENTENNIAL.—In 1808 at a reception given by Napoleon Bonaparte a certain Monsieur Blancard, a merchant of Marseilles, France, just returned from his travels through eastern Asia, presented the Empress Josephine with a few strange flowers, the first of Chrysanthemum Indicum brought from Japan to Europe.

NO SUNDAY FUNERALS.—The new law prohibiting the burial of the dead on Sundays has gone into effect in over 30 German cities. The measure was made the subject of lengthy and lively discussion at the fifth national convention of cemetery officials, held at Kiel recently, with results not made public as yet.

Formerly Garfield Park Flower Co.

PREPARE FOR EASTER

From Whom Will We Purchase Our Easter Supply?

From our old friend, Godfrey Aschmann, of course. He has been our man in the past, and will be the man this year: he also will be the man in the future. He has always treated us right. What he advertises he has and he is no bluff.—An immense stock of **Choice Easter Plants** now ready for immediate shipment. Blooming Easter week or before if desired.

If you would know the fairest sight your eyes can
 ever see,
Where the most perfect plants are grown, to
 Aschmann's come with me.
Why! Ne'er since flowers began to bloom was
 such a glorious show
Of all the best that florists need, found in one place
 to grow.
The lilies are the very best yet seen on Easter day,
Azaleas are whole sheets of flowers perfect in
 every way.
The Araucarias matchless are so are the ferns
 all green,
With bulbs, and plumed Spirea, the best you've
 ever seen
And Aschmann gives a challenge let every florist
 hear,
For flowers or prices, either no rival does he fear.
If you wish to gather dollars like violets in the
 spring,
Then send your largest order, his plants the cash
 will bring.

AZALEA INDICA.

We are headquarters for these plants for the past twenty-five years. We make a specialty of importing large quantities of this so well known favorite Easter novelty Grown for us in Ghent, Belgium, by an Azalea specialist. Have now three houses full of the choicest. Only well known American varieties are imported They are planted in the fall, as soon as they arrive from Belgium, into 6 7 and 8 in. pots, planted in greenhouses and kept cool during winter. They are now in excellent condition, covered with buds, just right for Easter.

☞ We only ship good stock and full of buds and flowers

☞ If you need Azalea plants, don't look in vain around the country for bargains, but come or write direct to us. We will be able to supply you with the best obtainable in the American market at moderate prices.

☞ What is the name of the best double pink Azalea? Mme. Van der Cruyssen is the name. Originated by the well known Azalea specialist, Mr. Van der Cruyssen of Belgium. Millions are raised every year and shipped into every part of the globe from Belgium. We have a big stock on hand of this well known variety. Every plant is as round as an apple, covered with buds just right for Easter Have all sizes for 60c, 75c, $1.00, $1.25, $1.50, $1.75 to $2.00 each.

Deutsche Perle (double white) 75c, $1.00, $1.25 to $1.50; Bernard Andreas Alba (white) we have mostly big plants of this variety. $1 50, $2.00, $3.00 to $3 50, a few at 75c, $1 00 to $1 25; Niobe (also white) 75c, $1.00, $1.25 $1.50 to $2.00 each.

Vervæneana, De Schryveriana (double variegated). 75c, $1.00, $1.25 to $1.50; Dr. Moore and Memorie de Louis Van Houtte (double pink) $1.00, $1.25 to $1.50; Apollo (red), 50c 60c, 75c to $1.00; other good varieties, such as John Llewellyn, Empress of India, Talisman, Helena Thielmann, Illustre, etc., 50c, 60c, 75c to $1.00; Professor Wolters, 75c $1 00 to $1.25.

When we are out of one color we send the next similar color; also if we are out of the size ordered, we send the next size, either above or below the price mentioned.

☞ Outside of the Deutsche Perle we have none of the small sizes of white to offer. All the small sizes of Niobe and Bernard Andreas Alba lost their buds during the winter and in transportation from Belgium. They never do good the first year, but are fine the next year.

☞ All the other varieties which we advertise are tip-top No. 1 stock.

Easter Lilies. Lilium Multiflorum, the genuine Japanese Easter lily, directly imported by us. We have a friend in Japan who looks after our interests there. He picks out for us only the good, healthy ones, and marks them while they are growing, the 10-in. bulbs, and therefore he ships to us the cream of the plants of Japan. We have Lilies this year to burn; can supply, if nothing happens, every customer and others who want Lilies. If you see them growing in our greenhouses, you must all admit they are "crackerjack9"; we sell them cheap, too. Where other florists get 15c per bud, we only charge you 10c per bud for plants in 6-in. pots, having 5 8 10 and more buds to the plant. Plants under 5 buds, 12c per bud, 6-in. pots.

Jerusalem Cherries, large plants, full of buds, 6 to 6½in. pots, 35c, 50c.

Moonvines (Ipomœa Multiflora), best white Moonvine for which we have a world-wide reputation now ready 2½-in. pots, $5.00 per 100.

Hybrid Rose Bushes, grafted, long plants, 30 inches to 3 feet high, John Laing Brunner, Magna Charta etc. 6-in pots, 50c, 75c to $1.00. **Rambler Dorothy Perkins,** etc. 5½ in., 50c; **Hermosa,** 5 in. 35c; 6-in. large stock, 50c.

Begonia new improved Erfordi, 5-in., $2.00 per doz; **Begonia Flambeau** 5-in $2.00 per doz

Spirea Gladstone. This variety owing to the dry summer in Holland last year is very scarce this Easter, but we were fortunate enough to secure sufficient to fill our usual house, and the plants are now in fine condition, full of buds just right for Easter, 6-7 in. pots, 50c, 75c to $1 00 each. Spirea Floribunda, Japonica and Superba, 6-in. pots, 25c, 35c to 50c.

Primula Obconica, 5-in. pots, $2.00 to $2.50 per doz.

Double Daffodils, Von Sion, best yellow, 3 bulbs in a 5-6 in. pot $2.50 to $3 00 per doz. pots.

Hyacinths, 4 best colors, King of the Blues, Grand Maitre (light blue), La Grandesse (best white), Gertrude (best pink) 4-in. pots, $12.00 per 100. Now outside in cold frames. Two weeks will force them into bloom.

Asparagus Plumosus Nanus, 3-in., $5.00 per 100

Hydrangea Otaksa, in bud, 6-7 in. pots, 50c, 75c to $1 00 each.

Cineraria Hyb. Grandiflora, H. F. Michell's new improved strain. Our plants of this strain are twice the size of those of other years, with perfect, large, green foliage. Some of the plants are almost as large as a bushel basket. 6-in. pots, 25c 35c 50c 75c to $1.00 each.

Areca Lutescens, 4-in. pots, three plants in a pot 25c.

Ficus Elastica (Rubber), 5½ to 6 in pots 25c; 30c 40c to 50c.

Boston Ferns, 6-in pots 50c; 7-in. pots, 75c; $1.00 to $1 25; 8-in. pots, $1.50.

Scottii Ferns, 5½-in. pots, 40c; 6-in. pots, 50c; 7-in. pots 75c to $1.00; 8-in. pots $1.50.

Whitmani Ferns, 7-in., as big as a bushel basket, 75c, $1 00 to $1.25; 9-in pans, as big as a washtub $1.25 to $1.50.

Neph. Amerpohli, 5¼ 5½ to 6 in. pots, 30c, 40c and 50c; 6-in., 60c to 75c.

Kentia Belmoreana, 5 good leaves, 5¼ to 5½ in. pots 25 to 30 in high 50c to 60c; 4-in. 35c.

Kentia Forsteriana, 6 to 7-in. pots, 25, 30, 40 to 45 in. high 75c, $1.00 $1.25 $1.50 to $2 00 each

Kentia Forsteriana, 5¼ to 5½ in. pots, 20 to 25 in. high 50c, 60c to 75c.

A Few of Many Testimonials Received Lately.

The Cherokee Greenhouses
Camden, S. C. March 9th, 1909.

GODFREY ASCHMANN,
1012 Ontario Street Philadelphia:

Dear Sir:—Plants received yesterday in excellent condition. Thanks for your selection.

Yours truly, S. M. SHANNON.

Chicago, Ill., March 1, 1909.

GODFREY ASCHMANN Phila:

Dear Sir:—I was so well pleased last Easter with the collection of Azaleas that I have sent you another order. (The order of Azaleas specified.)

MRS. H. LOWE, 1102 N. 43rd Ave.

Dozens of more testimonials on application.

Please state if in or out of pots.

☞ All goods must travel at purchaser's risk only. Cash with order, please.

Pat. Nov. 21, 1899.

W. C. KRICK, 1164-1166 Greene Ave., Brooklyn, N. Y.

Buffalo.

STOCK PLENTIFUL.

Weather conditions are as variable as only March can produce. Trade is only fair and stock is still very plentiful with all kinds of prices. Some growers will have to get a lot of sun to get their lilies in while others have no fear. Bargain sales on violets have helped the sale of other stock on Saturdays, otherwise things would be stagnant. Spring openings in all the large stores has given the florists some good orders for palms and flowering stock, also wild smilax and other decorative stock.

NOTES.

Superintendent Brothers of the city parks resigned owing to ill health and was succeeded by Auditor David Seymour, who has been with the park department for seven years. The appointment was a good one and Mr. Seymour will ably fill the position of superintendent. Frederick P. Knee was appointed auditor. There is a great deal of talk about removing South Park greenhouses but as yet, no place has been selected. The present location never was an ideal one on account of having to cross every railroad in the city to get there and now it is surrounded by the steel plant.

The notice of J. Benson and Fred Stafford opening their store on Upper Main street was quickly followed by the announcement of another store at 354 Main street, opposite the Hotel Iroquois, which will be opened by William Stroh, a large grower of Attica, who has associated himself with his son and Arthur Beyer, who for the past 10 years has been with W. J. Palmer, and has managed the upper store for the past six years. Mr. Beyer is a first class florist and with the large stock of Mr. Stroh, together with the location, the firm should be successful.

H. Keitsch & Son may get an automobile but they will pick it out themselves. An unruly one tried to force its way into their store recently.

Joseph Streit, foreman at Anderson's greenhouse, and Joseph Sangster of the store, are in New York and other cities on an inspection tour.

Geo. McClure & Son have some large contracts for trees and George Jr. has been away for a month getting them on the cars and ready to ship.

Visitor: F. W. O. Schmitz, Prince Bay, Staten Island, N. Y.

BISON.

Lenox, Mass.

The regular meeting of the Horticultural Society was held March 6, President A. Jenkins occupying the chair. George W. Allwood and D. Ferguson were elected active members of the society. The following exhibitions will be held under the auspices of the society: Annuals and perennials July 28 and the fall exhibition October 26-27. Schedules are printed for the same and can be had upon application to the secretary. A. J. Loveless was awarded a diploma for a display of amaryllis flowers, some of them being very rich in color, and also gave a short talk on their culture. The following question was asked, "What is the Cause of Disease in Lilium Harrisii?" A very interesting discussion took place, but no definite conclusion was arrived at. Several instances were cited where large commercial growers had thrown away thousands of diseased plants.

Rose and carnation night will be Saturday, April 3, and it is safe to say that competition in the various classes will be keen, as carnations are grown quite extensively in and around the city. After business is dispensed with there will be a smoker, when members who were not asked to sing at the dinner will have a chance to show their vocal talent.

The annual dinner was held at the Curtis hotel March 4, and was a decided success, about 80 members and friends being present. The night was far from being ideal, as a blizzard was raging at the time, otherwise the attendance would have been much larger. After doing justice to the good things provided by Landlord Curtis, President A. Jenkins spoke on behalf of the society and introduced A. McConnachie as toastmaster for the evening. Thos. J. Grey, in a very humorous speech, spoke on behalf of the Florists' and Gardeners' Club of Boston and the North Shore Horticultural Society, and said that gardeners, as a class, were the biggest set of grafters that he knew. During the course of the evening a telegram was read from A. T. Boddington, New York, regretting his inability to attend and wishing the members a very pleasant time. Other persons contributed to the success of the evening, namely, Mrs. J. Clifford, Mrs. Geo. Mole, W. Glennan, F. Howard, W. Jack and W. D. Curtis. Upon a suggestion from the toastmaster a rising vote of appreciation was accorded W. D. Curtis for the splendid banquet, and we closed with the entire party singing "Auld Lang Syne." The committee, of which E. Jenkins was chairman, is to be congratulated upon the success attending its efforts.

Washington.

CALM AFTER THE STORM.

We have had a week of Lenten tranquillity and following the strenuous days of inauguration week, a period of social quiet has found virtue in many eyes. Some of the hostesses of recent house parties have seized the opportunity to take a rest cure and, in consequence, the retailers have had very little to do, excepting funeral work. Bulbous stock is coming in plentifully and the supply is greater than the demand. Carnations are being disposed of anywhere from 50 to 75 cents per dozen. Roses have taken somewhat of a drop. There are plenty of flowering plants, such as azaleas, lilac, spireas, and others in season.

NOTES.

F. H. Kramer surprised the craft by the announcement of his marriage to Miss Irene Chedel, who has been acting as his cashier. It was a sort of an elopment in an automobile. The Rev. S. R. White of the Rockville Baptist church performed the ceremony. Mr. and Mrs. Kramer returned to the city late in the afternoon, walked in the flower store, and announced their marriage. The employes were dumfounded; they had always looked upon Mr. Kramer as a confirmed bachelor, and his marriage completely took the whole establishment off its feet. Mr. Kramer is still receiving the congratulations of his many friends.

Geo. C. Shaffer and M. Hamner attended the bowling congress at Pittsburg, Pa., and came home reporting a good time and very satisfied with their scores. Mr. Shaffer rolled a total of 538 in three games, Mr. Hamner 500, and J. E. Fields of the Agricultural team 580.

Visitor: I. Rosnosky of Michell's of Philadelphia, Pa.

G. S.

Orange, N. J.

The regular meeting of the New Jersey Floricultural Society was held March 12. The evening was observed as a special carnation night. Among 15 or 20 entries, Victory, Winsor and Lady Bountiful, predominated. The new carnation Mrs. Pfeuffer was exhibited by its originator John L. Pfeuffer of Irvington, N. J. It is a seedling of Prosperity X Floriana of Daybreak shade with a full calyx and very fragrant. Its owner, who was present and spoke, claims its superiority as a commercial variety, a heavy cropper and a free bloomer during the months of December and January.

Henry Hornacker of East Orange showed an exhibit of some well grown Victory receiving a certificate of merit. There was an elaborate display from private estates grown by William Reid, John Dervan, Max Schneider, D. Kindsgrab and John Hayes. Lager & Hurrell of Summit exhibited a collection of orchids among which a hybrid lælia was particularly fine. A paper, prepared by William Lyons, gardener to Robert R. D. Foote of Morristown, was read by the secretary. Mr. Lyons was prevented from coming by sickness in his family. A lively discussion followed the reading of the paper. Among those who contributed to the pleasure of the evening were Chas. McTaggert of Thorburn's and Thomas Grey of Boston, who addressed the gathering. The attraction for next month will be Charles Totty on chrysanthemums.

DOBBS FERRY, N. Y.—A meeting of the Horticultural Association was held in Odd Fellows hall February 27, at which some very creditable exhibits of roses, carnations, sweet peas, violets, etc., were displayed. The judges, Messrs. Knodel, Lindsay and Riley awarded first prize to J. Holgerson, gardener to Hy Siedenberg, and second to R. Boreham, gardener to the McComb estate, for the best four species of cut flowers. Cultural certificates were awarded to Messrs. Keeling, Lee and Harmes, also to H. T. Kastberg, gardener to the Misses Masters, for single and double violets. The prize for the next meeting will be for the best flowering plant.—J. B.

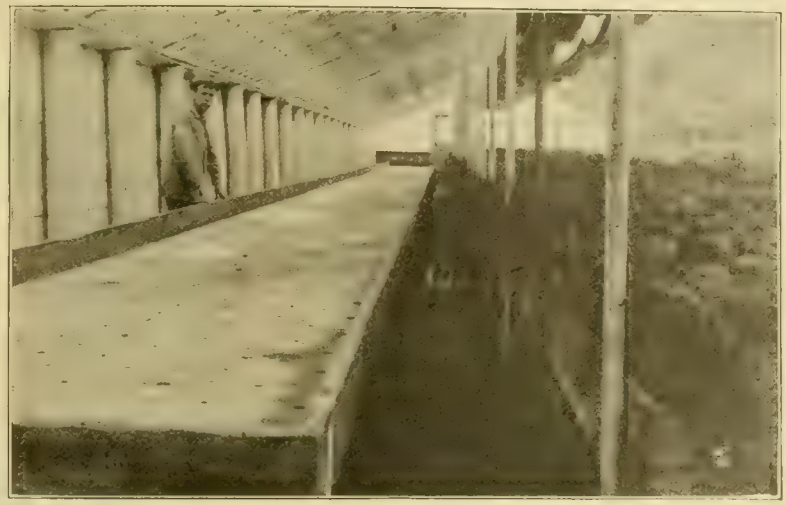
Witbold Cement Benches

Write us to-day for full instructions how to build them.



(1) Are more reasonable than wood in cost.

(2) Can be constructed as rapidly.

(3) Will last a life time.

(4) Will grow good stock.

It will mean money in your pocket this year and every succeeding year. **DO IT NOW.**

What some practical growers think:

E. H. HUNT, Chicago:
In reference to your Simple Cement Bench Construction will say I have equipped my new plant with them, using the Wittbold Clamp and Leg Moulds and find this construction **simple** and very satisfactory and would recommend them to all growers of cut flowers as a permanent fixture. Respectfully,
PETER NEES 1324 N. Western Avenue, Chicago.

E. H. HUNT, Chicago.
We have grown roses on cement benches principally, Killarney and as far as I could judge all during the season watching them closely I can see no difference in the plants between those grown on cement and wooden benches. ..... I have made plans to put cement benches into another house 22x350 this summer instead of wood
Yours very truly. ROBT. SIMPSON, Clifton, N. J.

Mr. Simpson bought **Wittbold Clamps** and **Leg** Moulds from our Exhibit in Niagara Falls last August and the above letter is in response to our request from him as to how satisfactory the benches were, and how the the stock was doing. Mr. Simpson has installed several styles of cement benches and among them the **Wittbold. Cement is no longer an experiment it is here to stay. Get in the front rank and write for particulars TO-DAY.**

E. H. HUNT, 76-78 Wabash Ave, Chicago.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At Chicago.

With the appointment of Allie Zech, an enthusiastic bowler, to the sports and pastimes committee of the Florists' Club, interest in bowling seems to be looking up. Bensinger's alleys, 118 Monroe street, have been secured and as many of the trade as possible are requested to meet there Friday evening of next week at 8 o'clock. The best bowlers developed by these Friday evening meets will go to Cincinnati to contest the honors of the S. A. F. convention match games.

At St. Paul.

The following score shows the complete route of the Mill-City bowlers on March 6. A third battle royal is scheduled in the near future:

ST. PAUL:			
S. D. Dysinger	88	168	109

Ever'thing's A-goin'.

When ever'thing's a-goin' like she's got a-goin,' now—
The maple sap a-drippin,' and the buds on ever' bough
A-sort o' reachin' up'ards all a-trimblin', ever' one,
Like 'bout a million brownie fists a-shakin' at the sun,
The children want their shoes off 'fore their breakfast, and the spring
Is here so good and plenty that the old hen has to sing!
When things is goin' this a'way, w'y, that's the sign, you know,
That ever'thing's a-goin' like we like to see her go!

Oh, ever'thing's a-goin' like we like to see her go!
Old winter's up and dusted, with his dratted frost and snow.
The ice is out o' the crick ag'in, the freeze is out the ground,
And you'll see faces thawin', too, ef you'll jes' look around—
The bluebird landin' home ag'in, and glad to git the chance,
'Cause here's where he belongs at; that's a settled circumstance.
And him and Mr. Robin now's a chunin' fer the show.
Oh! ever'thing's a-goin' like we like to see her go!

The sun ain't jes' p'tendin' now—the ba'm is in the breeze—
The trees'll soon be green as grass, and grass as green as trees,
The buds is all jes' eechin', and the dogwood down the run
Is bound to bust out laughin' 'fore another week is done.
The bees is wakin', gapy-like, and fumblin' fer their buzz,
A-thinkin', ever wakefuler, of other days that wuz—
When all the land was orchard blooms and clover, don't you know.
Oh, ever'thing's a-goin' like we like to see her go!

—James Whitcomb Riley.

Yellow Crocuses.

O you plucky fellows,
All in sunshine yellows!
Braving bitter winds and cold,
Waving fearless flags of gold
Welcome, crocus fellows!

Hardship and privation
Sleet and snow for ration,
Leave you laughing, gay and bold,
Grieve you little—faith untold
Mocks at mere privation.

Welcome, comrade fellows,
All in sunshine yellows!
Still your cups of light unfold,
Out of clay your glory mould!
Welcome, plucky fellows!

—Westminster Gazette.

Lent.

Where is the mind we had before
To flash the red light from the shore,
To whoop things up and whoop 'em more?
It's lent.

Where is the purpose that we should
Do everything to make ungood
And jar the whole darn neighborhood?
It's lent.

Where is the yearn before we had
To do the things the good call bad
And make the higher life look sad?
It's lent.

—N. Y. Times.

Indianapolis.

Business during early March was highly satisfactory. Funeral business has been light, but decorations, weddings and good counter trade kept the retailers busy. Roses were equal to the demand, carnations and sweet peas were plentiful. The latter are of very fine quality, white and lavender seem to be the most popular colors. Good smilax is rather scarce and not of very good quality. Killarney is at present undoubtedly the most popular rose, but some of the growers think that it is not equal to Bridesmaid as a producer.

MEETING OF STATE FLORISTS' ASS'N.

The State Florists' Association met March 2, and closed up the business for the carnation show which was given at the German house February 17-18. Each florist who contributed, received his proportion of the remaining treasury. A premium list was made some time ago by the association for the floral exhibition which is given annually at the state fair, by the State Board of Agriculture. The board has accepted this list and the by-laws of the association. Heretofore the association has taken no interest in the matter, but this year a florist will be engaged to take charge of this department. It is up to the florists of Indiana to encourage this annual exhibition and show the State Board of Agriculture that they appreciate the interest taken in the betterment of the florists in general. A committee of three, composed of Adolph Bauer, Homer L. Wiegand and Fred Huckriede was appointed to investigate and try to promote a chrysanthemum show here this fall.

NOTES.

Charles Meyer during his "Violet day" disposed of 30,000 blooms. Single violets are gaining in popularity.

Smith & Young Co. has broken ground for two new houses aggregating 15,000 feet of glass.

Geo. B. Wiegand has returned from his trip in the east, which he enjoyed to the utmost.

Irvin Betermann, the champion five hundred player, has been on the sick list.

Indications are that there will be no floral festival next November.

Alfred Pahud was married to Mrs. Emilie Stecher March 10.

A. Wiegand & Son are planning a new house for foliage plants.

Some local firms are investing heavily in cattleyas this year.

C. L. G.

Pillsbury's Carnation Staple.

"We consider a very good thing."

That is the report of the Judges Peter Olsen, Geo. A. Kuhl and F. L. Washburn at the Illinois State Florists' convention, Springfield.

"They are certainly the best thing that we have ever used to mend split carnations." G.B. Franks.

2000 for $1.00, postpaid.

WM. THOMSON & SONS, LTD.,

Tweed Vineyard, Clovenfords, Scotland.

Sold by the leading American seedsmen.

Chicago Notes.

There was an unusually large representation from the trade at the funeral of Mrs. J. F. Kidwell March 12. Among those present were: Frank Oechslin, W. J. Smythe, J. B. Deamud, W. P. Kyle, John Degnan, L. H. Winterson, John Muir, Geo. Wagner and Geo. Walther.

Zech & Mann, are receiving increased shipments of Killarney, Bride, Bridesmaid and Richmond roses. This firm expects to handle a large quantity of very fine lilies for Easter.

Joseph Vacha, 2550 Forty-Seventh place, will erect two new greenhouses, each 22x100 feet. The Foley Mfg. Co., will furnish the material.

C. L. Washburn returned last week from West Baden, Ind., entirely recovered from the grip from which he had been suffering.

Alex Newett, of the Stuppy Floral Co., St. Joseph, Mo., was in the city Monday to attend the funeral of his brother.

Visitors; C. S. Ford, Philadelphia, Pa.; T. T. Bailey, Manitoba, Que.; P. J. Nohos and wife, Milwaukee, Wis.; T. B. Coumandros, St. Paul, Minn.; C. S. Dwight, Janesville, Wis.

Cincinnati.

ROSES MORE PLENTIFUL.

Market conditions have changed some since last report and tea roses are more plentiful. The carnation supply was not quite as large as the week previous but the grower will receive better returns as very few blooms were sacrificed. Single violets had a good call the entire week and lilies of all kinds were good property. Bulbous stock was not so plentiful and fair prices were realized for all that was sold. Green goods of all kinds were in good demand with an ample supply.

NOTES.

We had a fine attendance at the meeting of the Florists' Club Saturday evening, with President J. A. Peterson in the chair. Herbert Greensmith and A. C. Heckman, Jr., were elected to membership. Reports of S. A. F. matters received from the different committees were all favorable and showed everything to be in first class shape and matters progressing nicely. A. M. Miller of Vaughan's Seed Store, Chicago, was present and gave the members a nice little talk. J. W. Rodgers submitted the following resolutions on the death of E. V. Hallock which were unanimously adopted by the society:

Whereas, The Lord had deemed it expedient in His All-wise Providence to call from us our brother craftsman, E. V. Hallock, and

Whereas, We feel deeply grieved to lose a friend so noble and true, and we are reminded also that by his death the horticultural world has lost one of its most noble and ardent friends, therefore, be it

Resolved, That the Cincinnati Florists' Society deeply feel the loss of our friend and brother, and extend their heartfelt sympathy to the family of the deceased, and be it further

Resolved, That a copy of this resolution be mailed to the family of the deceased, and it also be spread upon the minutes of the meeting.

After adjournment C. C. Critchell and Wm. Gardener served lunch, refreshments and cigars to which all present did full justice.

The executive committee of the S. A. F. then made its appearance, being in charge of E. G. Gillette. Speeches were made by President Valentine, Secretary Rudd, George Asmus and Judge Vesey and a pleasant hour was spent.

The executive board of the Florists' Society will meet with the chairmen of the different committees on Saturday evening, March 27, at 8 p. m.

Wm. Speck, who suffered a paralytic stroke last month, is, we are glad to hear, improving and we trust he will soon be himself again.

Joe Maunder of Newport, Ky., is very busy with plant decorations for spring openings.

Visitors: A. M. Miller, Chicago; J. T. Herdegen, Aurora, Ind.; Henry Lodder, Hamilton.

Glen Cove, N. Y.

The regular monthly meeting of the Nassau County Horticultural Society was held on Wednesday, March 10, President Everett occupied the chair. There was a good attendance of members. A paper was read by J. Elmslie on tree doctoring. Mr. Elmslie spoke of the necessity of caring for young trees. On a vote being taken it was decided that a Horticultural hall should be built in the city. Whenever necessary preliminaries are completed, steps will be taken for the erection of the new hall. Messrs. Jaenicke, Duthie and Garret acted as judges at the monthly exhibition. J. Wilson headed the list in the points competition with a superb lot of Weeber & Don's Snowball cauliflower. The points competition was as follows: G. Wilson, cauliflower, 90; O. Cleres, carnations, 89; H. Gaut, sweet peas, 85; J. Elmslie, carnations, 85; P. Reul, antirrhinums, 85. G. Wilson was awarded a cultural certificate with Beauty of Nice stock. A. Wilson, Summit, N. J., was unanimously elected to active membership.

W. H. MACKENZIE, Sec'y.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order We have just purchased at a forced sale **50,000,000 ft. Brand New Lumber and Timbers,** which we offer at prices lower than your local dealer can supply the same grade.
Estimates Furnished Free, Our Greenhouse Engineer will furnish you with any estimate on anything you may require in the Boiler, Heating Material or Building line. **Write for price list on Iron Pipe.**

SWANSEA, MASS.—The greenhouse of Manuel R. Serpa of Rehoboth was destroyed by fire March 1. The cause of the fire is unknown and there was no insurance.

Baltimore.

BUSINESS INACTIVE.

There has been no marked activity in trade; whether this is due to the more rigid observance of Lent, to the general dullness of business, or to the changeable and dreary weather is debatable. The city was, more effectually perhaps than ever since the introduction of the electric telegraph, isolated. Trains ran, if at all, most slowly, all the safety appliances being inoperative. Fortunately, though the snow was heavy and the winds high, the temperature was not very low, or greater suffering might have resulted. Travel was so interrupted on city and suburban cars that little was done by the stores, even some funerals being delayed by the inability to get to the cemeteries. The dull and cloudy weather continues, and is not favorable to the production of fine flowers. Only six days in the month were clear, whilst seven were partly cloudy and 15 were wholly cloudy, the sun being totally obscured.

For the past 10 days weather and business have both been fluctuating. At times the supply of carnations has been excessive and the street venders have had a chance at them, but almost all other flowers, except violets, are coming in in about such quantities as the daily calls absorb. Southern narcissi are plentiful.

FLORISTS' CLUB NOTES.

Following the annual meeting and election of officers at the Florists' Exchange, the Gardeners' and Florists' Club gave a dinner March 8 at the Caswell. The toastmaster, E. A. Seidewitz, introduced the speaker of the evening, Senator J. McCulloh Brown, of Allegany county, president of the State Horticultural Society, who, in his address, invited the members of the club to participate in the State Horticultural exhibition, which will be held at the Fifth Regiment armory next December.

Other members of the organization responded to the toasts as follows: Robert Brown, "Trade Expansion"; Geo. O. Browne, "The Gardener"; Richard Vincent, "European Floral Culture"; J. J. Perry, "The Gardeners' Club"; Geo. Morrison, "The Private Gardener," and Noah Flitton, "The Parks." E. A. Seidewitz then read several humorous telegrams which contained hits at different members of the club. At the meeting which preceded the dinner, reports of the various committees were read, showing that the organization was in a flourishing condition, after which the election of officers for the ensuing year took place. Last year's officers were re-elected as follows:

J. J. Perry, president.
Geo. Morrison, vice president.
F. G. Burger, treasurer.
Noah F. Flitton, corresponding secretary.
George Talbott, financial secretary.
C. M. Wagner, librarian.

The auditing committee, which was appointed by the president, consists of Robert Graham, Chas. Cook, Harry Wagner, Philip Welsh and Harry Quick. Among those who attended the meeting and dinner were J. McCulloh Brown, Albert T. Quick, C. Gregorious, M. Thom, Chas. Klutch, W. G. Lehr, Wm. Christie, I. H. Moss, James H. Boone, Albert Fiedler, Geo. S. Kalb, Geo. L. Seibold, Noah F. Flitton, W. G. Anderson, Geo. Talbott, G. O. Brown, F. G. Burger, J. J. Perry, Geo. Morrison, Robt. Brown, Richard Vincent, E. L. Newton, C. H. Wagner, H. J. Quick, H. Ekas, R. L. Graham and Philip Welsh.

NOTES.

The next year or two will see great advances towards the perfection of our park system, especially in the construction of parkways which will connect into one series the several parks in different sections. Plans have now been perfected and adopted for one which will connect Druid Hill and Gwynn's Falls parks; and the plans have been vised by Olmsted Bros., the landscape engineers. It will be 120 feet wide and connect Druid Hill at Liberty road and the Reistorstown pike with Gwynn's Falls at the Mt. Holly Inn. The opening of Thirty-third street boulevard and the Alemeda has been authorized and with the opening of this new parkway the system from Carroll to Clifton of the Municipal parks will be joined.

The Charles street stores have been showing some fine gardenias in their windows, and the flower seems to be growing in popular estimation. Some of the higher grade department stores are selling imitations of this flower and at a price about the same as the retail florists get for the real article, $1 each.

At the next meeting of the club March 22, the R. Vincent, Jr. & Sons Co. will put on the tables 100 varieties of geranium, illustrating the stock which that enterprising concern has gathered from Britain, Belgium, France and "the isles of the sea."

John Cook's store window on N. Charles street a few days ago was brilliant with a huge vase of his last new production, Radiance, a lovely pink rose. Mr. Cook is still confined to his bed with rheumatism, but his physician says his condition is improving.

John Cook is still confined to his bed and is suffering severly from his attack of rheumatism, but the physicians declare the worst of the attack has been passed.

Wm. J. Halliday is confined to his house by a severe spell of lumbago, which does not even permit him to lie down.

Regina, Sask.

Our long winter may be said to be about over. The last few weeks have been remarkably mild and spring-like and what little snow we have had is fast disappearing. The mild weather has had a good effect on trade, after the long, dull spell, succeeding Christmas and New Years.

Calling on J. T. Stemshorn we found him busy dispensing bunches of violets, lily of the valley, narcissus, roses and carnations to eager buyers. He reports business picking up nicely, and prospects bright. Among his pot plants a fine lot of Lilium Harrisii was noted, besides large quantities of hyacinths, narcissi, Primula obconica and spirea, in bud and bloom.

At Government House conservatory, a fine lot of azaleas are in bloom in the usual varieties. Carnations are also doing well there, especially Lawson.

G. W.

BRAMPTON, ONT.—Frank Lewis, for the last 10 years in the employ of the Dale Estate in the carnation section, leaves at the end of the month for Calgary, whither he goes to accept a position in A. M. Terrill's greenhouses.

TRADE IMPROVING.

The weather, as well as business conditions, have been improving considerably lately, and although we are in the Lenten season almost all the retailers have more work than they have had for a long time. Flowers are plentiful and can be bought at very reasonable prices so everybody is happy. Daffodils, which were quite a drug in the market and could be bought at almost any price, are getting scarcer and the prices are, in consequence, a little more satisfactory to the growers. Other bulbous stock is quite plentiful and is finding a good demand. The violet season is nearly over but there is still more than enough to go around. Since we have had brighter weather the roses and carnations have improved considerably. Lilium Harrisii and L. Formosum have been a good deal grown and are finding a ready sale. Fruit blossoms and wild flowers are adding variety to the stock in the stores; they are always great favorites with the flower-loving public. There is a great scarcity of medium and large decorative plants, especially kentias.

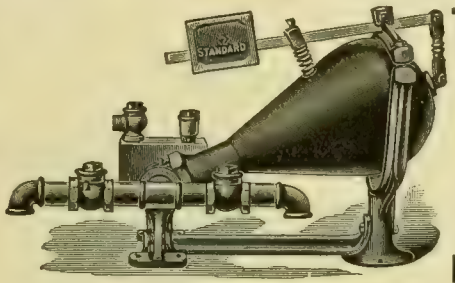
NOTES.

A number of the retailers are getting ready to move back downtown. The Sievers Floral Co. (P. Kelly, manager), has rented a very handsome store at 70 Geary street and will be located there April 1. J. R. Sievers will be in his store on Powell street at the same time and the Art Floral Co. will open up in a few days at 239 Post street. Podesta and Baldochi also intend to move back in the neighborhood of their old location in the near future. E. Matraia is said to have rented a store on Grant avenue near Sutter street.

Visitors: J. Tiplady, representing Currie Bros., Milwaukee, Wis., and Arnold Ringier, representing the W. W. Barnard Co., Chicago.

P.

LENOX, MASS.—The Horticultural Society held a banquet in the Curtis hotel, March 4. Among those present were: James O. Clifford, Geo. A. Mole, G. W. Ferguson, Edward Jenkins, S. W. Tillotson, Frank C. Hagyard and Howard Moat.



The Standard Steam Trap

Has established a record far above that that of any other trap for Florists; being very simple, durable and easily taken care of.

Catalogues of the **Trap, Duplex Gutter,** and **Standard Ventilating Machinery,** mailed free upon application.

VREDENBURG & CO.,

ROCHESTER, NEW YORK

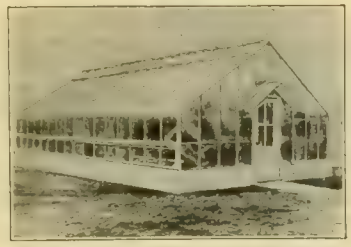
Louisiana Red Cypress

As described by Bassett & Washburn, Chicago.

"Replying to your favor requesting our experience with Pecky Cypress, we will say we have been using this grade of Cypress in our greenhouses and plant benches for the last ten or twelve years and so far have not found any of this wood that has all rotted out. We formerly used Hemlock and Pine, but found that two-inch stock only lasted about four years, while so far we have had no Pecky Cypress rot out in ten or twelve years. We use clear Cypress for all our roof work, ventilators, etc., and it is very satisfactory. We think it is the only kind of lumber for the purpose."

IT IS THE MOST DURABLE WOOD KNOWN. Ask about it at your local lumber yard or write

LOUISIANA RED CYPRESS CO. HIBERNIA BUILDING, **New Orleans, La.**



The "T" Bar Curved Eave Greenhouse

Is absolutely Dripless, glass rests on Wood, reducing breakage and condensation, less wood than any other construction, wood all exposed—all steel inside, all wood outside.

Greenhouses of Every Type.

VENTILATING APPARATUS.

The Pitcher Plant's Pitchers.

It has usually been taken for granted that the pitcher plant (Sarracenia purpurea) catches and digests insects for the nitrogen they contain, just as the sundew, butter-wort and others are known to do. Some experiments which have recently been carried on by Miss Winifred J. Robinson seem to indicate that the chief function of the pitchers is not that of catching insects, but of storing water for the use of the plant, says the American Botanist. While the experiments apparently prove that the pitchers have no fat-digesting or protein-dissolving powers, it has been shown that they are able to reduce sucrose and starch to simple sugars. The author says: "Sarracenia purpurea belongs to the class of plants, which like the bromeliads of the tropics or our northern catch-fly, illustrates a maladoption between plant and animals, for while they serve as traps for insects they are neither harmed nor benefited by them unless the number be very great. In the sphagnum bogs where sarracenia grows, the concentration of salts and nitrogenous matter about its roots is so great as to place them practically under xerophytic conditions. This would tend to render the root system inefficient as a means of water absorption and make the possession of a water-storing organ like the pitchered leaf of great advantage to the plant." The statement that nitrogen is abundant in the habitat of the pitcher plant is also unusual. Most botanical writers state that the insectivorous plants catch insects because of the dearth of nitrogen in the soils they inhabit. It is evident that the last word on this subject has not been said.

Garden and Desert.

My vineyard that is mine I have to keep,
Pruning for fruit the pleasant twigs and leaves.
Tend thou thy cornfield; one day thou shalt reap
In joy thy ripened sheaves.

Or, if thine be an orchard, graft and prop
Food-bearing trees each watered in its place;
Or, if a garden, let it yield for crop
Sweet herbs and herb of grace—

But if my lot be sand, where nothing grows?—
Nay, who hath said it? Tune a thankful psalm;
For, though thy desert bloom not as the rose,
It yet can rear thy palm.

—Christina Rossetti.

THE SPRINGFIELD ROSE INDUSTRY

A paper by Geo. D. Leedle, Springfield O., presented under the title of "Roses as Home Flowers and How to Grow Them," at the annual meeting of the American Rose Society, Buffalo, N. Y., March 17-19 1909.

A Word About the Author.

By way of introductory explanation, lest I should be sized as an upstart in the presence of a body of men so ably representing their chosen profession, permit me to state that upon receipt of the request from Secretary Hammond suggesting that I prepare a paper, I promptly informed him that in spite of the fact that my business associations represent 25 years of experience, I am personally nothing more than a four-year-old. Nevertheless, "the man behind the roots" has been delivering the goods, the publicity department has been delivering the orders, the florists and nurserymen have been delivering the cash, and, on the theory that "he who blows not his horn, the same shall not be blown," I am probably justified in sailing under the flag of an "expert rose grower," by association.

With the whole truth in his possession, Mr. Secretary renewed the invitation, stating that new men were desirable additions, and assigned the topic under which I am now supposed to speak, although a somewhat different line of thought had been in my mind. But no matter, you are familiar with the old idea that "a rose by any other name would smell as sweet," and have probably heard of the preacher who took a text and then "went everywhere preaching the word," and if I should deviate somewhat before getting to the main point you may conclude in your minds that I am not "thornless" and probably belong to "the rambler class."

The previous years of my business experience had been in mercantile and manufacturing pursuits in which commodities are measured by the foot rule or yard stick, the hundredweight or ton, the capacity or the labor saving qualifications; hence, it was rather difficult at first to grasp the idea that a 2-inch pot might contain a 3-inch plant, or vice-versa. Naturally, I had been trained to view most matters from the standpoint of cold commercial considerations, which fact may cause my statements to seem lacking from the viewpoint of the life-long grower of things floral.

Having consummated plans to embark in the rose growing business, I donned a blue apron, behind which I had once served as cook at a Y. M. C. A. oyster supper for the boys, and a pair of congress shoes which had proved useful about a brick yard where I had attempted to make bricks, not only without straw but with limestone pebbles in the clay, and, after the manner of Samuel and Isaiah, prophets of old, said to the foreman, "Here am I," whereupon I was given my first practical job in wrapping rose plants for shipment; later to weeding, grading and moving up. Although at the outset I scarcely knew a rose bush from a gooseberry bush, except by the fruit, I was pronounced a great success at grading, from the fact that I could tell a big plant from a little one better than several of the old hands at the business.

Finally, step by step, I rose to the eminent responsibility of being permitted to make cuttings, interspersed with turns at dumping, potting, etc. I was also allowed to cut the short stem roses in order that I might learn the varieties and at the same time please relatives and friends with buds and blooms by the lapfuls. Little by little the various steps in the propagating and growing of roses in a commercial way have come under my notice, but the necessities of the business have taken me away from the practical part rather more completely than is good for my floral education or physical well being. The question naturally arose, shall the product be marketed locally, or shall a market be created which shall extend from ocean to ocean and from Jamaica to northern Canada? The answer was promptly given.—the latter.

Rosy Propositions.

The attention of Mr. Hammond appears to have been attracted by a booklet issued originally under the title, "Rosy Propositions," and logically it was issued for that purpose. He mentions that it follows somewhat the plan of a dictionary in that the prospective buyer seeking information can readily find what he is looking for, by either color, class,

description or price, the description being aimed to include the principle and distinctive features of each variety. To describe a rose properly was at first a quite difficult task for me as an uninitiated florist, but, by reading the descriptions given in other catalogues (which, by the way, are frequently rather contradictory), talking with a grower or two, and, if possible, taking personal observations, I am usually able to round up a description which will pass muster and have not yet been censured by the old timers.

Mr. Hammond thought he saw some traces of gumption in the make-up of this booklet, but there were certain portions of the original issue which the boys about the greenhouse who were pretty well acquainted with me were accustomed to refer to as hot air, but we never attempted to utilize this product to operate a hot-air engine, however. The wooden label of the florist as a trade mark has seemed to readily attract attention as something distinctive and suggestive, and an original trade-mark kept constantly before the public would be found effective by any grower having a regular product to sell.

Square Deal for Customers.

In dealing with the floral trade in general, it is found that the prime requisite is to inspire confidence; first in ability to understand and to fulfill his particular requirements; second to truthfully represent the size, strength and condition of stock offered; third, to label absolutely true each and every item; fourth, to promptly execute, pack and ship an order, or make known quickly any inability to fill same. In other words, the florist, like any other tradesman, insists upon a square deal as a condition of continued patronage.

As to the popularity of the rose as a home flower, one need but glance over the pages of floral, nursery and seed catalogues to find it in most cases in the forefront, usually on the cover; or, to turn the pages of the leading magazines and other periodicals to find the queen of flowers the most luring incentive toward the forwarding of a cash subscription. In cut flower growing, the amount of glass devoted to roses would probably far exceed that devoted to all other classes of plants and flowers.

Retail Mail Orders.

The retail mail orders are largely written by the women, and there is no other plant or flower so freely and universally prominent in orders as the rose, from which it is apparent that it is first in the choice of woman, and what woman says goes in most families. Even in times of panic, the woman as a rule manages to lay by her little fund for the annual floral order, which, to her credit, is just as much of a necessity as food and clothing.

In Springfield and its suburbs, the annual crops of small rose plants considerably exceeds 4,000,000, and in a season of liberal planting and favorable conditions for propagating, the aggregate would probably approximate 5,000,000. Quite a large percentage of this product is consumed by the concerns issuing mail order catalogues which go to the homes of the people, the remainder going to florists and nurserymen throughout the land for the various purposes of retailing in the market as pot plants, benching for cut blooms, bedding for ornamental purposes and landscape gardening, and for lining out in the nursery row to become field-grown bushes.

Propagation.

To accomplish this result, 400,000 or more young plants from 1½ to 2½-inch pots are planted on the benches in rows five to six inches apart during the period from about January to April, depending upon the ability of the sales department to make room by early shipments of stock. Pretty high temperatures are then maintained, the sunshine being largely depended upon for daytime heat, and from perhaps May to August, the wood is cut as it happens to come into

Typical One-Year-Old Pink Rambler Rose.

just the proper state of ripeness according to the judgment of the grower in charge, the number of successive growths and cuts varying from one to three according to the variety, season and demand for each particular sort. Occasionally, a belated lot of stock plants remains on the benches and propagation in the opposite season is resorted to, but this is only an emergency measure, the preference here being to adhere closely to summer propagation.

The wood is made up into cuttings of from one to a half dozen eyes, according to variety, rarity, condition, abundance, demand, season and various other governing circumstances, usually in the summer months but occasionally the work is prolonged into the fall. The rooting is accomplished in hotbeds and requires from two to six or more weeks according to variety and weather conditions, the percentage of the strike depending largely upon the skill and experience of the grower and his ability to master adverse weather and other conditions, but some percentage of loss is inevitable under the most favorable circumstances.

Potting of the rooted cuttings is the next step, these going into 1½ or 2-inch pots before being set on the benches, watered and carefully shaded for some days until strong enough to endure the direct rays of the sun. During the autumn sunshine, substantial roots and tops are made until the nutriment in the potful of soil is practically exhausted, then a shift is made to a 2 or 2½-inch pot as the case may be, and occasionally to a 3-inch pot by special order. During the winter, the rose houses are run at a quite low temperature, approaching the freezing point for some sorts. By this method, the plants are given a rest during the winter season and are permitted to take a fresh start at the approach of spring.

Summer the Growth Season.

Herein, as held by the rose growing fraternity in this particular locality, lies the value of the "summer grown, winter rested," idea, namely, that summer is the natural season for all things to grow and winter is the natural season for all growing things to rest, consequently, by following this method we are working in harmony with and not contrary to nature herself, and nature is proverbially kind to all who obey her laws.

The own-root method is likewise believed to be in line with nature, being followed exclusively here, and is found in the long run and with the far greater majority of final purchasers to produce the most satisfactory results for all concerned. For a retail catalogue mail order floral concern, the perplexities which would arise from the sending out of grafted or budded rose plants by the millions to amateurs all over the earth would be such as to make the life of the correspondent a burden.

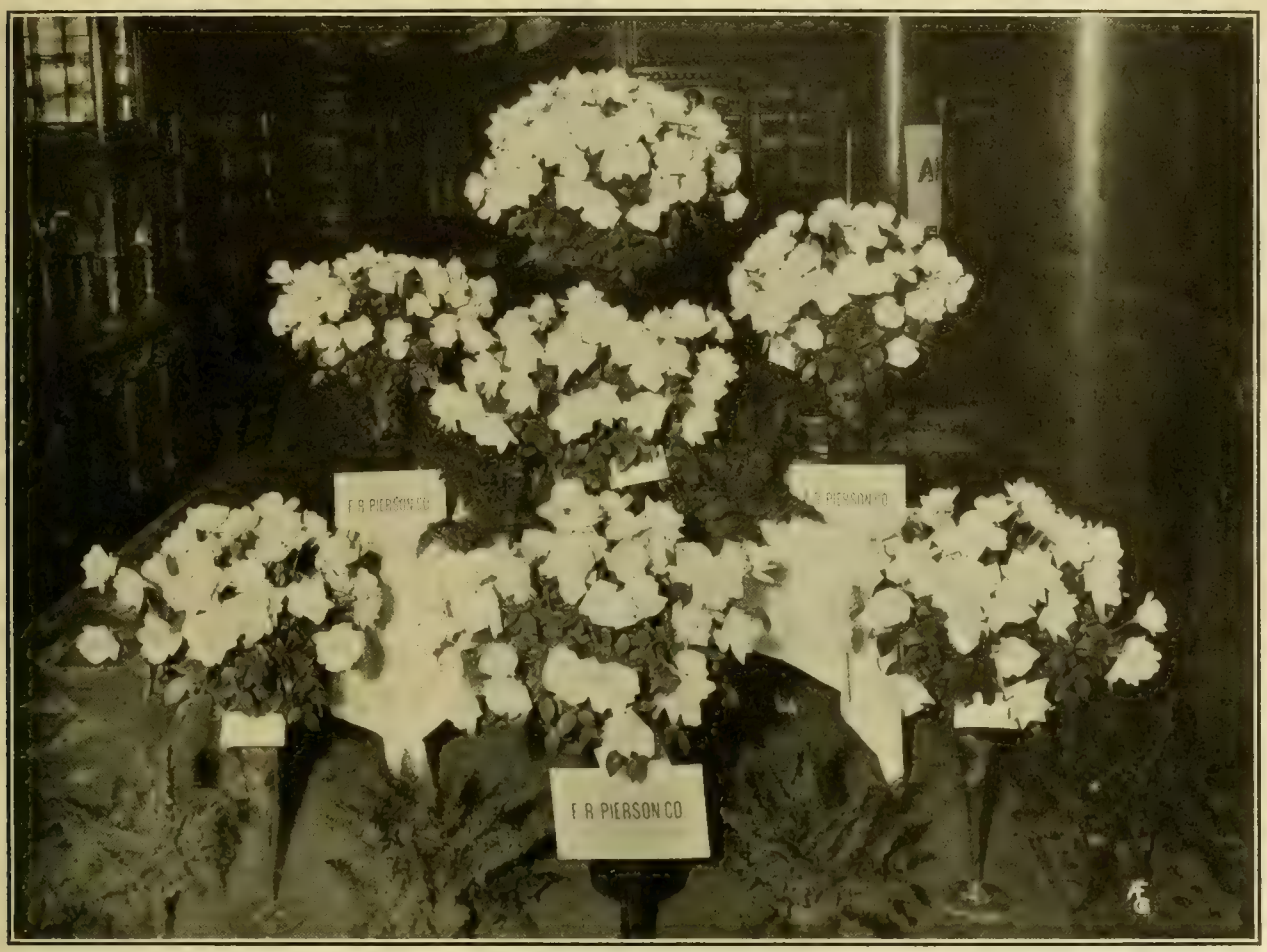
A Word About Grafted Stock.

As to the comparative advantages of grafted stock for certain cut flower sorts, I would not be qualified to speak. While quicker results may be obtained, the observation of the most experienced members of the Springfield Florists' Club through many years leads them to claim with confidence that in the long run, all things considered, the own-root rose plant will outstrip its grafted competitor in the production of cut flowers and is superior for all other purposes. They argue that being "on its own legs," it must necessarily run longer and faster than when tampered with by any artificial process.

In this particular market, the summer propagation idea has also the advantage of bringing the crops into shipping size, strength and condition at just the right times for supplying the various demands. Beginning in January rose plants are wanted for sending by mail and express to the southern states for early planting and this demand works gradually northward to northernmost Canada. About February the retail florists begin to secure a supply to grow on to proper size for market and wagon sales; in March the spring trade in general starts in and continues for some months; the nurseryman follows soon after with his order for young plants for lining out about April, and the late planting and straggling orders continue into May and June. The method and season of propagation herein described provides in due course for all of the various wants mentioned.

Rose Houses for Rose Plants.

It is obvious that the best results may be obtained by growing roses exclusively in houses containing nothing in the way of soft or miscellaneous stock such as may require different temperatures, and it is also generally conceded that the grower who is expected to know the habits of a hundred or two different



F. R. PIERSON CO'S., EXHIBIT OF WHITE KILLARNEY AT THE BUFFALO ROSE SHOW.

sorts of roses on a commercial scale should have little else to occupy his attention. Hence the advantages of concentrating the undivided energies of the working organization to the growing of one particular line as a specialty.

In our community, containing a number of concerns, all of which grow roses to a greater or less extent, the number of varieties being about 450, it will always be inevitable that at times there will be a short crop and a long demand, or vice versa, as to some particular varieties, this being affected by the variations in amount planted, the favorableness of the season for propagating and fluctuations in the demand from year to year. But frequently one grower is long on a variety of which another is short, and in a very commendable spirit there is a disposition among the fraternity to be mutually accommodating in the interchange of stock which makes possible the more complete filling of orders and assists in a practically general clean up of stocks by or before the close of the season.

Order Early.

The buyer of rose plants wishing to secure the best of stock and certain varieties in particular should by all means place his order with a dependable grower several months in advance of the time for shipping; in fact, early winter is the best time, if not earlier, to engage roses for spring delivery. The plants can then be selected, shifted, set aside in cool houses, and brought to the requisite size, strength and condition for delivery at any specified time. Postponement in placing an order is very frequently likely to cause disappointment by reason of certain desired varieties having been sold out and no further supply available until the following season. In ordering rose plants, it is advisable always to state for what particular purpose they are wanted, and briefly the kind of stock expected. The intelligent grower or order clerk will then have a clue to guide the selection of plants in just the condition to make them best adapted to the desired end.

The substitution of a different variety under the label of a variety definitely ordered is a practice not to be tolerated in this present day of floral enlightenment and it is entirely proper for the buyer to insist upon getting every item true to label, the shipper to notify him to such effect if unable to supply the true variety. On orders requiring quick shipment, it is well for the buyer to mention a second or third choice in case of varieties which he may not absolutely require, and this will faciliate the filling of many an order in the rush season.

The cheap collections advertised in the magazines and other publications for premium purposes are a prolific source of the substitution evil and by no means calculated to foster a true knowledge of roses on the part of the amateur. Many a woman or man will proudly exhibit a rose as being of such and such a variety when in reality it may be a radically different sort belonging to another class and possibly an entirely different color. But this appears to be practically irremediable so long as the consuming public retain the bargain counter craze and defer ordering until the rush is on in full blast. At such a time, correspondence with a legion of customers would be an absolute impossibility, the catalogue being presumed to contain all necessary information. One retail mail order catalogue to our knowledge has endeavored to discourage correspondence by mentioning a charge of 10 cents for each written letter in reply to any particular inquiry.

Girl labor is gradually being introduced in the growing, labeling and packing of roses and other plants at the various greenhouses, and by reason of their faithfulness, attentiveness, deftness of hand and aptness to learn floral knowledge, they are conceded to be preferable to boys or young men for many classes of work.

The Question of Stock Plants.

The growers of roses by the own-root summer propagation method are inclined to take issue with the cut flower houses following the method of propagating in the winter from forced and practically exhausted stock. It is argued that it is against the laws of nature to propagate in the non-growing season when such vegetation should naturally be taking a rest just the same as living beings require the rest of night after a day of activity. And it is claimed that stock forced for blooms for a year or two of constant strain must naturally be lacking in the vitality of blood necessacy to make a vigorous and healthy offspring, and that in the long run the quite small plant propagated at the natural time from wood taken from a parent in the

prime of its vigor will win out over its competitor propagated at an unnatural time from constantly forced and exhausted stock.

In other words, it is held that the florist about to plant for cut roses, instead of propagating from his own stock or purchasing, say, 3-inch pot roses from another cut flower house, had better buy and take a new start with fresh and vigorous and naturally grown plants from 2½ or even 2-inch pots. To meet the demands of cut rose houses, local growers have frequently discussed the advisability of attempting to meet the demand for 3-inch stock for planting in May or June, but they are always up against the stubborn fact that the 3-inch pot occupies the same space as three 2-inch pots, and bench room for a large quantity of 3-inch seems never to be available being always in demand either for the 2 or 2½-inch stock or for that which is on the benches for propagating purposes.

No Secrets.

Finally, as to the Springfield method of rose growing, it has in some cases been assumed that this is in the nature of a trade secret, but such is by no means the case. Every department of every greenhouse in this locality is open to the inspection of any and every person practically every day and night of the year, visitors invariably being given a cordial welcome. Nevertheless, the success of the local plant growing industry has been built on years of long and varied experience and the art is not to be learned in a day. Moreover, all natural requisities are at hand, among which are admirably adapted soils, just the right sand, suitable stable manure mingled with straw, a favorable climate, experienced help, central location for shipping, encouragement of one grower to another, and a multitude of other considerations too numerous to mention.

Constant Watchfulness Needed.

From start to finish, the battle against diseases, pests and possible disasters too numerous to mention is something terrifying, and the unceasing vigilance and extreme caution required might best be likened to raising a baby. Among other things, the stock plants are liable to be attacked by grub worms, fungus, green fly, scorching from sun heat by reason of slight delay in watering, while the advisability of disbudding or not and the proper ripening of the wood prior to cutting are problems requiring critical judgment and care; the cuttings in the hotbeds are constantly on a tremble between life and death, being subject to fungus and other attacks and sensitive to momentary changes from cloud to sunshine, from sunshine to storm, and from moist to dry atmospheric conditions, so that happy is the head grower after he lifts a choice lot of rooted cuttings showing a fair or extra good "strike." When finally potted, the young plants are still very tender and a little too much or too little sun or under or over watering may prove fatal, and even after having started fairly on the journey of life their enemies are legion; mildew, black spot, red spider, leaf rollers and a host of other pests are seeking their lives by night and by day.

Occasionally, the proprietor of some distant house buying annually a goodly quantity of roses, says to himself, "go to now,—I will hie myself to this great rose growing center and hire me a man who shall grow roses for me up to the full extent of my requirements and I will then no longer send my order away." But usually, the man who know how, year after year for all varieties, is in some way or other tied fast to the houses in which he has grown up perhaps. But some man is found who either professes or is by some person said to be an all 'round rose grower, and he is secured and placed in charge of the houses of the before mentioned distant buyer.

But, the general outcome of such attempts has been that some one or more of the thousand elements (stated by one of your past essayists to be essential to success, while only one is essential to failure) are found to be missing either in the man or in the locality selected, and it developes that a large portion of the needed roses must still be ordered from the former source. Consequently, we have in various local houses quite a number of "the boys" who have "sown

Wm. Kleinheinz.

President National Association of Gardeners.

their wild oats" as it were by undertaking such a distant job but are glad to have got back home again to live and die amidst old and familiar scenes and take an occasional smile at the attempts of fresh victims of the experiment on one side or the other, and to read a letter now and then from some old chum who would be glad to get back if he were not "stuck" from some cause or other. Moral—Springfield grown, summer propagated, winter rested, own-root roses will invariably save you a lot of money or trouble, or both.

The Question of Variety.

For the commercial rose plant grower, one of the most difficult problems is to determine what varieties to grow and what not to grow and what quantity of each to plant. One season there may be a shortage of a certain variety and the next a surplus, so that it keeps one constantly guessing as to the probable trend of demand for the numerous sorts in more or less popular favor. Even more difficult is it to correctly forecast the rapidity with which a new sort will be taken into favor liberally by the trade, and the matter of buying stock plants at 10 cents to 30 cents, or 50 cents each is somewhat in the nature of a gamble for the average grower having no traveling salesman to personally introduce a new rose at a comparatively high price.

On this subject, the best informed man in America if not in the whole world, in our opinion, is your esteemed member from Indiana who irrepressibly bobs up every few months with not only one new and great thing, but a whole bookful of tempting novelties and late introductions from Europe, and he is ready to prescibe on a moment's notice the very thing which will best meet any long felt or short felt want which you may happen to express, and you pay your money and take your choice. Then, soon after, along comes a young gentleman traveling from another state with some novelty bearing at least a new name, who remarks how surprising it is what a lot of "junk" is unloaded on the growers in this district. But, a few seasons are required to fully test any new rose and it must not only prove a reasonably good grower but a good seller as well to remain permanently in popular favor and commercial demand. Despite the fact that E. G. Hill has a keen eye for business, we view him upon the whole as a philanthropist in the matter of disseminating valuable knowledge and in encouraging greater things in the growing of roses and other beautiful things in general, to say nothing of his own accomplishments in the line of hybridizing. In conclusion, I feel that rather more has been said in this paper than should properly come from a comparative novice, and wish to thank the officers for their invitation and the members present for having patiently listened.

National Ass'n. of Gardeners at New York.

The annual convention and exhibition of the National Association of Gardeners, held at Allaire's hall, Seventeenth street and Third avenue, New York, March 17-18, was a noteworthy and successful event. The judges of exhibits were Chas. H. Totty and Arthur Herrington of Madison, N. J., and Wm. Turner of Oceanic, N. J. The cups won made a fine display. Noteworthy among the prize winners were: Wm. Kleinheinz, Ogontz, Pa., who took the silver cup for carnation seedlings with Dorothy Gordon. Other carnation prizes were won by Wm. Lyons, Morristown, N. J., and James Stewart, Mamaroneck. Mr. Stewart also took a special prize for specimen cyclamens. These plants were remarkable for size and wealth of bloom and it is doubtful if their equals were ever exhibited in this city.

AWARDS.

Four varieties of roses, American Beauty excluded, 12 blooms of each.—James Bell, Garrison, N. Y., first; Wm. Kleinheinz, second

Twelve blooms American Beauty.—Wm. Kleinheinz, first.

Best variety of rose disseminated in 1908, 12 blooms.—Wm. Kleinheinz, first with Mrs. Jardine.

Best specimen orchid.—James Bell, first.

Special prizes were awarded Jos. A. Manda, W. Orange, N. J., for collection of orchids; Arthur Griffin, Newport, R. I., for Gloriosa Rothschildiana; A. Wynne, Hartford, Conn., for stocks and sweet peas; Rickards Bros., New York, for primulas, and Carl Schafer, Tuxedo Park, N. Y.

THE BANQUET.

The banquet on the night of March 17, was a very enjoyable affair. President John Shore of the association presided. A most interesting and instructive address was delivered by Prof. G. T. Powell of Briarscliff Manor, New York. W. E. Maynard and A. F. Faulkner spoke briefly for the press. Other speakers were Wm. Kleinheinz, John T. Withers, W. E. Marshall, James Bell, C. H. Totty and Andrew Wilson. There was a good attendance and the association may be congratulated on the successful outcome

of its arrangements. Officers were elected as follows: Wm. Kleinheinz, Ogontz, Pa., president; Jas. Bell, Garrison, N. Y., vice president; W. E. Maynard, secretary and treasurer. The next place of meeting was fixed for Philadelphia, Pa.

THE RETAIL TRADE

OUR eighth supplement appears with this issue. Retailers are saving them and placing them in a folder where they are immediately available to show customers who are undecided as to the character of a piece of flowers they may need. They thus form a convenient album, worth many times the subscription price of the paper.

"A BRIDE'S NUMBER" is the title of the April issue of the Ladies' Home Journal, with a bride's bouquet of lily of the valley, cattleyas and Adiantum Farleyense on the front cover in colors, tied with white ribbon. On page 23 W. J. Palmer, Buffalo, N. Y., has a series of six illustrations showing the "New Bridal Bouquets" with brief comments under each picture.

Roses and Cypripediums.

SEE SUPPLEMENT WITH THIS ISSUE.

Roses and orchids are not associated as often as they might be. Roses for fragrance and beauty and the quaint outline of many of the orchids, especially cypripediums, form an irresistible combination and one that during the winter and early spring months the average retailer will have no difficulty in arranging. Cypripediums of the insigne varieties are among the most lasting flowers in existence and with care may be kept for several weeks, provided they were fresh and newly opened when cut and not soiled or injured by water, while roses are almost always to be had. In the bunch illustrated Carnot was the variety of rose used, the cypripediums being all varieties of C. insigne.

As has been frequently pointed out in these columns a bunch of flowers, to be successful, must be so arranged that every flower counts, that each one does its part in the make-up, and that a good full bunch results without any suspicion of crowding. A good floral artist will make a finer bunch with a dozen good flowers than the bungler with three dozen and will thus insure not only greater satisfaction to store patrons but a larger profit. The knack of doing this comes natural to some men, others could never learn it. A most successful artist of our acquaintance, no matter how large, in reason, the bunch he is making, always holds the flowers in one hand and adds to them until finished, getting an assistant to place a firm tie just where he holds them, and the bunch is complete. Others will use a spool of tie and in straining at the last will pull the flowers all out of shape, drawing them together where they should be separate and vice versa. This neat handling of flowers is greatly to be desired in a floral artist and should be practiced. The little spot bunch is a telling point with many customers.

DECATUR, ILL.—C. W. Harrold has started a greenhouse on Main street for growing early vegetable plants.

JOHNSTOWN, N. Y.—Thos. Barson has established an up-town office in the Fulton Co.'s building, where orders for flowers are taken.

A PINK FLORAL PARASOL BY CARL OBERHEITMANN.

Carnations, Hydrangeas and Ribbon, All Pink.

Brooklyn, N. Y.

RETAILERS HAVE A GOOD TIME.

The Retail Florists' Association celebrated its first anniversary March 16 by a theater party and dinner. The members of the association, accompanied by their wives and families, occupied 140 seats at the Orpheum and rewarded several of the women performers with huge baskets of flowers in which were pinned neat notes inviting the recipients to participate in the dinner that followed.

After the performance the entire party went to the Cafe Raub on Nevins street, where the balcony had been reserved for them. During the afternoon and evening the members had seen to it that that part of the cafe was suitably decorated. The walls were hung with smilax, palms and potted plants were placed in points of vantage and tables were covered with fresh cut flowers while a handsome bouquet awaited every lady, including the eight lady members of the association. During the dinner several of the performers from the Orpheum who had accepted the invitation to be present entertained with songs and stories.

Among the members who attended were A. L. Miller, D. Y. Mellis, John Fitzsimmons, William Rooney, A. A. Hyatt, S. H. Powell, Edward Reich, Martin Grotewahl, Alexander Wacker, J. V. Phillips, Hugo Jahn, Joseph Mallon, John Mallon, F. E. Muchmore, F. McKee, Chas. Krombach, E. Weir, J. H. and J. Zschorna, J. Wachtel, J. Van Mater, F. G. Van Mater, H. W. Wipperman, Henry Murphy, D. Hollingsworth, J. Dowlen, Jr., and Geo. W. Crawbuck, and the following women members: Miss K. Copley, Mrs. G. I. Laird, Miss E. C. Thinnes, Miss K. Rodman, Miss Burgess, Mrs. F. B. Ross, Mrs. Russell and Mrs. D. Sperwin. The officers of the association are: R. G. Wilson, president; A. Wacker, vice-president; Joseph Mallon, treasurer; W. A. Phillips, secretary, and Joseph James Dowlen, Jr., financial secretary. The dinner committee was composed of Hugo Jahn, chairman; R. G. Wilson, Miss E. C. Thinnes and Mrs. F. B. Ross.

POEHLMANN Bros. Co., Chicago, used manures and fertilizers in their various greenhouse plants to the value of $5,300 during 1908.

SUGGESTIONS FOR PLANT GROWERS.

Easter Lilies.

After this it is only a question of having the plants on time and preventing their coming too early. Plants showing color must go to a cool house and, as the violets are often about past their best now, the plants that are forward may be stood on the violet benches thinly. This will improve the foliage and harden the plants for shipping. As the flowers open go over them regularly and remove the anthers, before these burst and scatter the yellow pollen on the pure white flowers. Plants evidently late must be driven now for all they are worth and at that will not be so good as the former as the foliage will be softer and the flowers of less substance. Another light fumigation may be given just before the flowers commence to open but not after they begin to burst. Any green fly on these must be removed with a damp sponge.

Marguerites.

The plants advancing for flower must have the best of attention now. Usually they are grown in pots of as small a size as it is possible to get good results from and, being strong rooted, they will be getting pot bound and need regular feeding. The water supply will also have to be kept going freely to maintain a vigorous growth and supply nutriment to the flowers that are forming. Any lack of feed or water leads to the loss of the lower leaves and weakness in the flowers, besides rendering the plants more susceptible to insect attacks. Another point that must be watched is to see that the plants have plenty of room all around and, if they have been in the same position for a month or six weeks, probably more room will now be needed. At all times marguerites like a cool airy house; they cannot thrive in heat and moisture. Spread open as advised and with the air rustling the leaves on all possible occasions they will keep healthy, other conditions being right. Any small stock still to be potted must have attention at once. Use a good, loamy soil, with a fair percentage of grit and old cow manure and pot very firmly. These will make good stock for window boxes and bedding out.

Petunias.

Single petunias are among the most easily raised and most generally satisfactory of bedding plants and, unless in a very wet season, are always showy and bright in the beds. The seedlings from the earliest sown batches will be ready for pricking off but there is time to raise another lot which will be ready by June. It is not the forwardest plants and those in flower at planting time that give the best final results. Small sturdy stock in flats or just feeling the sides of 2½-inch pots are better than these. The petunia is not particular as to soil or treatment provided it is not placed in a position away from the light. Give them room from the earliest stages on and the usual treatment for tender annuals and they will be satisfactory. Double petunias, especially the double white, make excellent pot plants for summer display and they may be propagated now by means of the young shoots starting from the old plants. They will root readily in the bench at a temperature of 60° or thereabout, and should be potted on and kept regularly pinched until the 5-inch size is reached, when they may be let go. This plant is naturally of a straggling habit in most varieties but the constant pinching in a young state will ensure shapely, bushy stock.

Two-Year-Old Cyclamens.

No one has more sympathy with the grower who habitually throws out everything that has ceased to be of value, and refuses to cumber up his houses with useless stock than the writer. Nor has anyone more consistently followed this out in practice or recommended it oftener in the press and otherwise. But it is time to call a halt when so many writers advise the throwing out of cyclamens that are less than a year old in many cases for these are valuable property. Where the plants have been neglected, perhaps laid around in the store and lost their foliage and are gone wrong generally then by all means throw them out; they are not worth bothering with. But left over stock, or stock that has been used for cutting and has been well looked after right along will make finer plants for next season than can possibly be grown from spring or autumn sowing. The old plan of drying the plants off and turning them out in a frame or some other place to be roasted by the hot sun has been long enough dead to be forgotten, but its memory is still in the minds of some old-time growers and these are often they that decry keeping stock over.

When the plants have finished flowering let them finish growing as well and then take a short rest, naturally, not forced by withholding water and baking them in the sun. After a few weeks, signs of new leaves will appear and then the plants should be turned out of their pots and a good part of the old soil removed. It is better to be a little in advance of their starting than to wait until they have made much growth, as, with the new growth, comes new root activity and this will give the plants a start in their new quarters. Some growers like to repot their plants into a smaller size and grow them on in pots; others plant them in a prepared frame and either way is good provided the requisite details are properly carried out. We prefer the frame method, but only because it is less trouble, and, in September or early October, pot the plants into their flowering size. The summer treatment in either case consists simply of keeping the plants growing gently right along and to do this moderately heavy shading, plenty of air and as much atmospheric moisture as can be kept up during the hot days are all that are necessary. When these plants are potted in fall and go to the greenhouse the crowns are just choked with flower buds and they have grand foliage, far before spring sown plants and, usually, better than those sown in the previous August. But after the second season sell them or throw them out; two years is about the limit of their usefulness.

Hydrangeas.

The flowers on the plants intended for Easter will now be almost fully developed and removal to a cool house to finish is advisable. The advantage now of an early start will be apparent as those plants that were late and had to be hastened at the finish will not be nearly as good in color. In finishing the plants the roots will have to be somewhat liberally fed as there is a big strain upon them in carrying such immense heads of flowers from such small pots as are generally used. There are usually a number of flowerless shoots among the flowering ones and these should be taken off now and rooted, if it is desired to grow on stock at home for next season. Root them at once in a temperature of 60° and get them potted as soon as well rooted. Grow them on fairly cool for a time, pinching the stronger ones to induce them to bush out and allowing the weaker ones to continue on single stems. Many growers prefer to purchase imported plants in winter rather than grow on their own stock, but it is very little trouble

EXTERIOR OF WHOLESALE STORE OF CHAS. MILLANG, NEW YORK.

to grow the plants and stock can be obtained from the plants without in any way injuring them for sale. After Easter, or rather after it can be seen which plants are likely to be in for Easter, it is best not to hurry the remainder, unless they are needed for some specific date. Let them come along naturally and they will be all the better for it, though, of course, the amount of room that will be at command may make it necessary to get the plants finished and out of the way as soon as possible.

Pot-Grown Annuals.

Where a retailer has glass in which to grow his stock and has room to spare, a few annuals grown in pots often prove a success from a financial point of view. They are very little trouble to grow, and are showy and sell freely when well done. Asters, stocks, balsams and even mignonette are all useful and showy and flower over a long season. After the seedlings have been pricked out once on a bench to harden and spread out they may be potted in the 5-inch size at once, and stand pot thick on a bench or in a frame, watering and an occasional light fumigation being the only attention necessary until they are ready to go outside into plant protectors when they will have to go farther apart. Good bright colors and white in the asters, stocks and balsoms are the readiest sellers. Mignonette is a little more trouble to grow, but usually sells well. Rhodanthes and several other "everlastings" are also suitable for this kind of culture and the old Browallia elata is of unusual color and habit. There are, in short, quite a number of easily grown, showy annuals that are different to what is usually grown and should prove profitable if their culture was gone about systematically.

Spireas.

While no plants are more easily grown than the spireas (astilbe), of such varieties as the old Japonica, Queen Alexandra, Gladstone and others, yet they are often spoiled for want of room while growing. It is folly to start more plants than can be taken care of until they are finished. The specimens draw up one sided and, no matter how much room they are given later, they never regain that symmetrical form so desirable in market plants. Owing to the small pots these are grown in, very liberal feeding and watering are necessary and, toward the finishing stage, it is best to keep the plants standing in saucers to insure the roots keeping moist. It is surprising how soon such plants suffer under the influence of sun and air, and it is practically impossible to keep them moist with the ordinary watering. These spireas are clean growing, healthy plants seldom attacked by insects if given ordinarily good treatment. Green fly sometimes appears on the young leaves but fumigating is seldom necessary and should not be practiced if it can be avoided as, in the earlier stages, the foliage is very tender and the tips once damaged never recover and have to be removed. Plants that have been pushed for Easter must be gradually brought into a cooler and more airy house before being exposed for sale.

FAR ROCKAWAY, N. Y.—John F. Marsden is building a new greenhouse larger than any in his present plant.

HINSDALE, ILL.—Henry Rohmer has purchased an extensive greenhouse business at Morris. Associated with him is Ivan Krohn, a former resident, and the two young men should make good.

WITH THE GROWERS

Easter Plants at Philadelphia.

An inspection of the stock of plants offered this season for the Easter trade by the growers of Philadelphia, shows that they have made great preparations and fully expect record breaking sales, or at least, in amount equal that of any previous year. There are few, if any novelties, although the general line of popular plants seem to be done very well and the cream of the stock is certainly the equal of any ever offered in this market.

INTERIOR OF CHAS. MILLANG'S STORE, NEW YORK.

Mr. Millang is in the Right Foreground.

THE ROBERT CRAIG CO.

One of the largest growers is the Robert Craig Co. whose establishment at Forty-ninth and Market streets contains a large assortment of very well grown stock, which seems just right in point of time, a very important feature to be considered by the grower, who is certainly to be congratulated when such a record is made. The features here are rambler roses, azaleas and bougainvilleas. Of the roses Tausendschon, which sold so well last season, is seen in quantity and will without doubt be a leader. Lady Gay and Dorothy Perkins are also offered in fine specimens. When well flowered, no Easter plant sells as quickly to discriminating customers as do these. A house of well budded crimson together with another of hybrids have a very classy look. There are several large houses filled entirely with azaleas, the best Easter sorts, ranging from small basket plants up to specimens and pyramid trained plants that are always in demand when well flowered. The specimen bougainvilleas are gorgeous in their cloud of blossoms and should be among the first of the articles crossed off the list as all sold. A house of Spirea Gladstone shows the plants in splendid form being full of green spikes which should be just right for the market. There is also a block of S. Queen Alexandra, the pink variety. The houses of lilies bear testimony to the fame of Mr. Craig as a grower of this plant. Here, as elsewhere, a large percentage of the stock had to be thrown out on account of the worthless bulbs that seem to find their way into the importations of Japanese stock that is annually sent to this country.

A large block of rhododendrons, in fact several of them, are well budded and contain the best varieties. There is a little section of Pink Pearl, the aristocrat of the family. A house of hydrangeas, every shoot carrying a head of flowers makes a beautiful display. Daisies are also a feature; there are marguerites, and the double Queen Alexandra and the new pink sport of the same. Lily of the valley in pots is an addition to the assortment and very popular with nearly all buyers. There are quantities of foliage plants, crotons in very large assortment, dracænas in variety, all the standard ferns of the Boston type, Todeaoides, Amerpohli, Whitmani, Scotti, pandanuses and Ficus pandurata. The latter is only in large sizes as the great demand for this plant the past season has taken all of the medium grade. It is certainly a great plant as grown here. Mr. Craig says that orders are coming in from all directions and that he anticipates a great Easter.

WM. K. HARRIS.

One of the show places at this time is that of the veteran grower Wm. K. Harris. Very phlegmatic indeed must be the individual who, after going from house to house of this large establishment, is not filled with pride that men who can accomplish so much exist today and are raising the standard of the business by such lavish display of magnificently flowered stock. Azaleas are the feature; never before has Mr. Harris offered such a superb stock or in such variety. All the popular sorts are here, in sizes ranging from small stock for basket work to the largest specimen bush and pyramid forms. The dwarf Japanese, as well as the gorgeous Ghent varieties, with their wealth of yellow blossoms, all make this azalea display one of the

best in the country. Rhododendrons are also offered in quantity, many in extra sizes being seen. There are several houses of hydrangeas, well colored, blue flowered stock being a specialty.

A house of genistas, another of deutzias well budded and which is a specialty of M. Mills, the foreman, who by the way, is an enthusiast of the first water, an optimist who dreams ideas and then carries them out. Last week he dreamed he was Irish and sent out over 70,000 shamrocks. This week the old sod is covered with hydrangeas and azaleas, all to be turned into hard American dollars in the next two weeks. Another dream, and the barren waste will be covered with pot roses which later give room to ferns, foliage plants and chrysanthemums, which fill the houses to overflowing for the fall trade, which this enthusiastic gentleman says will be larger than ever. There is in addition a house of gardenias in pots full of buds and flowers. Another of spireas, two of Easter lilies, fine stock, two of Crimson and Baby Rambler roses exceptionally well budded and foliage plants galore. Very striking is the white maple, also the variegated bougainvillea and we must not forget the flowering plants which made Mr. Harris famous years ago. Pandanus Veitchii fills a house and, of the Boston family, particularly Scotti, and the new Harris sport of the old Boston there are fine specimens in every section.

K.

safely and was very salable." An order was being packed to go to Mexico, which when I spoke of the distance brought out the answer that this was a regular customer who never had found fault with the way the goods arrived and that he had customers all over the United States and up into Canada. His invariable practice is, cash in advance, which, he says, enables him to give the lowest prices as there is no percentage to add on for bad debts.

It is wonderful to see the amount of good stock on hand when one considers the size of the place, but it is explained in the fact that nothing is neglected, Certain lines of plants are grown from which Mr. Aschmann does not deviate; his stock of azaleas, spireas, hydrangeas, lilies, etc., are kept up to the top notch of perfection by careful cultivation. Of those imported personal selection in Europe enables him to get just the best the market affords in shapely, bushy plants and varieties true to name and at the bottom cash prices. Most of the grades offered are in medium sizes for which there is a large demand. His azaleas as seen are remarkably well budded and clothed with foliage, giving them a luxurious appearance that makes them sell on sight. Van der Cruyssen, Vervæniana, Bernard Andreas Alba, Niobe, Appollo and Simon Mardner, are the principal sorts. There are several houses of these which seem to be just right in point of time. A house of Spirea Gladstone is heavy with its green spikes coming up from masses of foliage. A house of hydrangeas was just beginning to show color; they were shapely plants well set with buds. Several houses of lilies looked very promising but many had to be thrown out. The best price had been paid for good bulbs but a great percentage had developed into the large, broad leaved variety that does not perfect its buds and has to be thrown out after the buds have developed and failed. It is a great loss to the grower both in the original outlay and the after room taken up, that might be used for a profitable crop if the failure could only be foreseen. Primula obconica, from which the bloom had been pinched, was coming in full flower, there being a good demand for this plant for Easter when it is well covered with bloom. A house of cinerarias was well worth seeing; many of the specimens would win prizes at a horticultural show. The flowers were large and the foliage perfect.

Outside, hyacinths, tulips and daffodils were seen by the thousand just uncovered. There is a great demand for this class of stock from those having a trade for medium priced plants. Araucarias, a specialty here, are seen in quantity, splendid symmetrical plants from last season's importation. About June 1, 10,000 araucarias in variety arrive and these together with the importations of kentias coming in at the same time, fill the houses and are grown on for the fall and winter sales. The spring season is given to bedding plants, geraniums, begonias of the Vernon type, Salvia Bonfire, etc. Moon vines are also grown here in quantity. Over 10,000 moon vines are sent out each season and other plants are also handled in similarly large lots. At present these stocks are in crowded quarters on hanging shelves and other available parts of the houses awaiting the removal of the Easter plants. This constant utilization of room and quick following of seasonable crops is one of the keys to Mr. Aschmann's success; the other is his ability to convey to buyers all over the country through the medium of the trade press, the bargains he at all times is able to offer them. He is a great believer in printer's ink and while many would be appalled at his advertising bills, he simply smiles, makes out a check and sends out another batch of his uniquely worded "ads" minutely describing his stock and its tempting prices.

ROBERT KIFT.

ESTABLISHMENT OF GODFREY ASCHMANN, PHILADELPHIA, PA.
Interior View of one of the Araucaria Houses.

Godfrey Aschmann, Philadelphia, Pa.

The establishment of Godfrey Aschmann, 1012 Ontario street, Philadelphia, is unique in many respects. It is the finest arranged of the smaller places I know of, or have had the pleasure to visit. In this establishment every nook and corner comes daily under the eye of the proprietor or one of his superintendents, his sons, who have grown up with the business and know every little detail so that in its most vital parts, this plant growing machine is perfect. It is in one respect a mail order business as nine-tenths of the orders are brought by Uncle Sam. A batch opened while I was present contained good sized orders mainly for Easter delivery. The postcripts on several were pointed to with pride, they ran "Hope you do as well as last year when goods were most satisfactory and arrived in fine shape." Another, "Duplicate last year's order and add, etc. Stock of last season arrived

ESTABLISHMENT OF GODFREY ASCHMANN, PHILADELPHIA, PA.
Partial Exterior View of the Greenhouses.

To Be Done Now.

IN THE GREENHOUSES.

See there is no possibility of dust reaching the flowers in any room, shed or house where Easter lilies are placed to hold them back.

After dull spells keep a bright look out for the sun. Sudden bursts injure tender, growing stock unless shading is at once applied.

See that no chance insects remain on old stock plants from which cuttings are being taken or probably they will soon be found on the young plants.

Start caladiums of the fancy leaved varieties in boxes or flats with a little light soil before potting.

Pot pelargoniums very firmly and use a fairly rich soil. A little bone meal or a few rough bones over the drainage hole is a help.

Obtain the necessary supplies of seed of Asparagus plumosus nanus, as there is no better time for sowing for quick germination.

Push on with violet propagating. The young divisions start to root anywhere now and should be set going on their own account so as not to disturb the young roots later.

A good mulch of cow manure will be of great assistance to the rose benches now both as a feeding medium and for keeping the sun out of the soil.

OUTDOORS.

Avoid sowing seeds too deeply; the upper inch or two of soil is warmer and better aerated than that lower down. Draw flat, wide drills rather than narrow, deep ones.

Rose planting is in order just as soon as it is possible to get the surface soil in good condition for working.

Plant out handlight or frame cauliflowers on well prepared borders made fairly rich. Leaving them in the frames too long often leads to "buttoning" or premature forming of the heads.

Prepare the quarters for hardy annuals with especial care and commence sowing as soon as the ground is in good condition.

Where any fruit tree pruning has to be done on land that is to be cropped this season get it finished and all prunings gathered and burned at once.

Plant the necessary hardy vines or climbers to newly erected verandas, porches, pergolas, etc., or to cover dead trees and unsightly places.

Never allow manure to lay and heat in loose, open piles. Run a team over it to consolidate it and keep in the heat and ammonia.

Push on with all repairs to walks and roads and other work that can be done in bad weather so that all energies can be bent on the spring work.

Twenty Years Ago.

MARCH, 1889.

The araucaria was beginning to become popular among eastern florists.

A memorial, largely signed, was presented to congress asking that a duty of 30 per cent be placed upon all imported plants.

The beautiful Kalanchoe carnea was among the novelties and was figured in the AMERICAN FLORIST.

"American Beauty is blooming every day and will produce more money than any other hybrid rose under cultivation" said a well known Boston rose grower.

Cutting lilac branches from the open and placing them in the greenhouse under the stages in water was recommended as a good method of getting cut flowers.

Carnation Germania, a yellow variety easily raised from seed, was among the novelties.

Grace Wilder was the most popular pink carnation.

Large numbers of florists went on record as pledging themselves to buy nothing but "standard" flower pots in future.

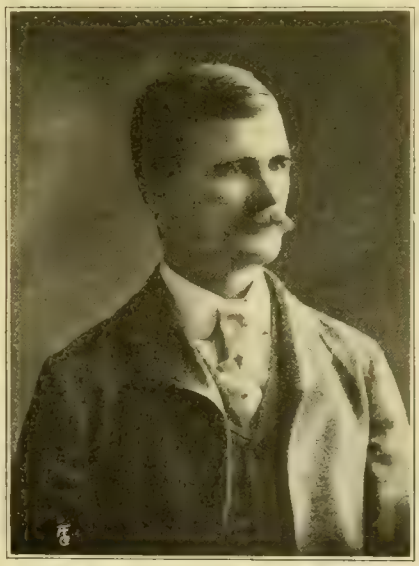
OBITUARY.

Mrs. M. C. Hauswirth.

Mrs. M. C. Hauswirth (nee Tolnot) widow of the late P. J. Hauswirth and who, with her son, J. E., succeeded him in the conduct of the business in the Auditorium Annex, Chicago, passed away

The Late Mrs. M. C. Hauswirth.
And Her First Grandson.

after an operation for appendicitis Friday night, March 19. A woman of many admirable and lovable qualities, she will be sadly missed by a large circle of personal friends. She was born in Germany January 5, 1864, and while still



The Late George P. Esch.

a babe was brought to this country by her father and mother. Twenty-seven years ago she was married to the late Mr. Hauswirth at the same address, 146 Clybourne avenue, from which she was finally carried to her last resting place in Rose Hill cemetery. Funeral services were conducted both at her late residence and at the grave by Rev. Father Craig with the impressive ceremonies of the Catholic church. She is survived by her son, who has with her had charge of the business, and also by a daughter Elsa, now Mrs. W. F. Hoyt. Two grandchildren also survive, Maybel Hauswirth and Marie Hoyt. The boy shown in the accompanying illustration was her first grandson, who died still a baby in the spring of 1906. Many elaborate floral pieces were sent by numerous friends in and beyond the city, among the latter being W. F. Kasting, Buffalo, N. Y.; F. H. Traendly, New York; C. C. Pollworth, Milwaukee, Wis.; P. J. Breitmeyer, Detroit, Mich.; J. A. Valentine, Denver, Colo.; Otto Koenig and Fred Meinhardt, both of St. Louis, Mo., and H. E. Philpott, Winnipeg, Manitoba.

Mrs. Hauswirth's death came as a shock to her many friends throughout the country, as very few were aware of her serious illness, which was only of a few days' duration. Her uncomplaining and self-sacrificing character was was well shown in the fact that she had suffered several previous attacks of appendicitis without reference to them. Hosts of friends swarmed to her funeral from all parts of the city, testifying to the esteem in which she was held by all classes of the community. President Valentine of the Society of American Florists attended in person and C. C. Pollworth and wife, Milwaukee, Wis., attended the services. Mrs. Hauswirth was prominently identified with the Ladies' Society of American Florists and a regular attendant at its gatherings. No woman was better known to or more universally beloved by the trade throughout the country and her pleasant smile and cheering word will be greatly missed by all who knew her.

George P. Esch.

George P. Esch, a well known retailer died at his home 3729 Third avenue (Bronx borough), New York, on the morning of March 18, aged 41. Death was caused by a complication of diseases. Over a year ago he had a serious illness from which he never quite recovered. Mr. Esch was born and reared in the Bronx, his father having formerly been a grower in that section of the city in the years before real estate values had reached the high figures that now prevail. The place was once noted for the large quantities of pansies and other plants, grown in frames. For a number of years George had been in business for himself at the Third avenue address and being an energetic worker had built up a good business. It is said by business acquaintances that his first sickness was brought on by overwork. By the wholesale dealers with whom he had business dealings, he was very highly esteemed for his honesty and integrity of character. He is survived by a widow, May Hohmann, and two young daughters, aged 11 and 7 years, respectively. The funeral was held from the family home on Sunday, March 20, interment being in Woodlawn cemetery.

Ernest Weber.

Ernest Weber, 2386 Lincoln avenue, Chicago, died Tuesday afternoon, March 23, of erysipelas after a very brief illness, aged 48 years. He was born in Wurtemburg, Germany, and came to America about 25 years ago, settling in Chicago. He worked in the grenhouses of various growers of Bowmanville, Evanston and surrounding territory until he and his brother Fred went into business for themselves at the above address in what were known as the Grossman greenhouses. For the past four years Ernest Weber has conducted this place alone, growing roses, carnations, chrysanthemums and making something of a specialty of Easter lilies. An invalid wife survives him, but no children. The funeral will be at 2 o'clock p. m., Thursday, March 25, from the residence to Graceland cemetery.

F. R. PIERSON explained tariff matters very clearly in a brief address at the banquet tendered the members of the American Rose Society by the Buffalo Florists' Club March 18, so far as they concern florists, seedsmen and nurserymen. The work of the tariff committees representing the three national trade organizations at the joint meeting held at Buffalo on the same day was summarized in our issue of March 20, page 378.

TEXAS reports dull trade generally in horticultural lines on account of the hard times. Hope is now based on good summer crops to bring business back.

MRS. WM. SCOTT, Buffalo, N. Y., writes requesting us to express her thankfulness and appreciation to all those who in any way interested themselves in the Scott memorial.

WITH thousands of rose plants coming on for Easter in the greenhouses east and west, it is surely a sign of something wrong when not a single plant could be produced at the great annual exhibition of our national rose society in Buffalo, N. Y., a central location for all the leading growers of rose plants in pots, tubs, etc.

American Carnation Society.

CARNATION REGISTERED.

By Berterman Bros. Co., Indianapolis, Ind.—James Whitcomb Riley, color, clear golden yellow; parentage, Lawson and unknown yellow seedling; size, three to 3½ inches; habit like Lawson but with longer stems.

ALBERT M. HERR, Sec'y.

Tariff Committees Meet.

According to arrangement, the committees of the Society of American Florists, American Seed Trade Association and American Association of Nurserymen met in Buffalo at the Iroquois hotel to compare notes as to the interests that each one had in common. The Society of American Florists was represented by F. R. Pierson, J. D. Eisele and Benj. Hammond; the seed trade association by J. C. Vaughan and Kirby B. White, and the nurserymen by Chas. J. Brown, Irving Rouse, Wm. C. Barry, J. H. Dayton and Wm. Pitkin.

After the conference, lasting three and one-half hours, the following resolution was adopted and signed for the three associations and this resolution was to be forwarded and used as far as possible with congress to secure the desired end, that is, to abolish ad valorem duties and make them specific.

We, the members of the American Seed Trade Association, the American Association of Nurserymen, and the Society of American Florists, as represented by our duly authorized committees, and speaking for these three great industries (practically all of the commercial horticultural interests of the United States) unanimously agree upon the following resolution:

Whereas, There is now pending in the national congress a tariff measure, known as the Payne bill; and,

Whereas, This bill may, without prejudice to the welfare of the public, but, on the contrary, to the great economy of customs administration, be so framed as to relieve all horticultural importers, government officials, etc., of the insuperable difficulties in the way of a fair and equitable administration of any excise upon this class of imports, based on the ad valorem principle;

Now, therefore, be it resolved, That, collectively and individually, we appeal to the congress to make all duties upon seeds, nursery stock, bulbs, etc., whatever revenue they may be intended to produce, or whatever interests they may protect, upon a specific basis.

Buffalo, N. Y., March 18, 1909.

J. C. VAUGHAN,
For American Seed Trade Association.
S. H. DAYTON,

For Society of American Florists.
BENJAMIN HAMMOND, Sec'y.

Society of American Florists.

MID-LENT MEETING OF EXECUTIVE BOARD.

Pursuant to the call of President Valentine the regular mid-Lent meeting of the executive board was held at the Sinton hotel, Cincinnati, O., March 13, 15 and 16. Those in attendance were President Valentine, Messrs. Traendly, Vesey, Gillett, Dailledouze, Asmus and Rudd. The usual routine business was transacted, including the adoption of a programme for the annual convention next August.

A protest against the charges for space at the late trade exhibition at Niagara Falls was received and after careful consideration of the matter the following resolution was adopted: "In view of the fact that it is not shown that the parties protesting were charged on any different basis than many other exhibitors who have paid their bills without protest, the board cannot see how in justice to the other exhibitors any rebate can be made in the special cases in question." In view of the dissatisfaction at the late trade exhibition and of the constant friction between exhibitors and managers in years past, it was decided that for the next exhibition the charges for space would be largely reduced, and in consideration of that reduction the exhibitors would be required to furnish their own tables and cloth covering for them.

The question of rules for the exhibition was referred to a special committee with instructions to prepare and present at a later session a thorough revision of them.

The report of the treasurer and the financial report of the secretary for the year 1908, and also supplemental reports covering the months of January and February were received. The financial reports of the secretary were presented as approved and endorsed by a firm of public accountants, in accordance with a resolution adopted at the meeting of 1908. These reports were submitted, together with the vouchers, to a committee consisting of Messrs. Traendly and Vesey and were examined by them and reported correct, and were then received by the board.

A recommendation from the society for the election of an honorary member was considered and it was decided that as there was no specific provision for the election of an honorary member in the by-laws, it was inexpedient to authorize such action.

It being considered that the presidential addresses in the past have not been properly acted upon and that many important recommendations have failed of attention, the president was requested to appoint a committee in advance of the convention and to submit to the members of this committee copies of his address, and that the committee be instructed to make a special report on the address and its recommendations, and some time to be specifically set aside in the programme for the general discussion of the address and its report.

A proposed amendment increasing the fee for life membership from $25.00 to $50.00 was received and ordered printed in the programme for action at the next convention. A request from the Cincinnati Florists' Club that they be allowed to issue tickets and collect admission from the general public on Thursday in place of receiving any portion of the proceeds of the trade exhibition otherwise, was granted.

It was decided that all interest on the society's funds, both general and permanent, collected during the year 1908 should be transferred to the permanent fund. In connection with the committee of the local club, the board examined the halls submitted for the trade exhibition and the meetings, namely, two floors in the music hall for the trade exhibition and the Odeon hall for the meetings, and accepted them. The usual appropriations were made for the year.

The secretary was authorized to deposit copies of the old reports of the society now on hand with various experiment stations, libraries and public institutions willing to accept and care for them, when it would appear that such deposit would render them available to the public and advance the general interests of horticulture. The treasurer's report showed that the permanent fund now amounted to over $6,000 and it was deemed that steps, looking to the permanent investment of the same be taken and a committee consisting of Treasurer Beatty and Messrs. Vesey and Dailledouze was appointed to make such investment.

The following resolution to the memory of the late Edward V. Hallock was received and adopted:

"To the memory of Edward V. Hallock.

"We, the members of the executive committee of the Society of American Florists and Ornamental Horticulturists, in session assembled have no words at our command that will express our sorrow for the taking from our midst of our fellow worker and beloved friend, E. V. Hallock. We desire to extend to his family our heartfelt sympathy. He was a good man and true, honorable and conscientious and loved by all who knew him. Peace to his ashes, not our, but Thy will be done.

"Therefore, Be it resolved that these few lines be spread upon the minutes and a copy be forwarded to the bereaved family."

The exhibition rules committee reported that a proper revision of the rules would require very careful consideration and would take more time than was available. The committee was therefore given power to act in the matter at a later date. Wm. Murphy having been recommended by Vice-President Gillett and the Cincinnati Florists' Club for superintendent of the trade exhibition, was unanimously elected to that office.

A resolution was adopted that no goods should be sold at retail at the trade exhibition of this society. It was also decided that an advisory committee of three should be appointed for the trade exhibition. E. F. Winterson was appointed chairman of the sports committee. J. W. Rodgers having requested the board to name some persons who would be qualified to speak regarding floriculture before Chatauqua associations, the following names were suggested: E. G. Hill, Robert Craig, P. O'Mara, John T. Withers and Leonard Barron.

The visit of the board to Cincinnati was made most enjoyable by the hospitality shown by the local members. The banquet at the Sinton house on Monday evening was a most enjoyable event. The entertainment by the club on Saturday night was most thoroughly appreciated and the invitation extended to the board by J. A. and Mrs. Peterson and R. and Mrs. Witterstaetter resulted in most enjoyable visits to their beautiful homes and places of business.

The following final resolutions were adopted:

"In closing the session we wish to tender our thanks to the Cincinnati Florists' Club and its members for their friendly reception, their effective assistance and their magnificent hospitality and our thanks are especially due to Mr. and Mrs. Peterson and Mr. and Mrs. Witterstaetter for inviting us to their homes and receiving us with such lavish and open handed hospitality."

REGISTRATION OF CLEMATIS.

Public notice is hereby given that the Jackson and Perkins Co., Newark, N. Y., offer for registration the plant described below. Any person objecting to the registration of this plant or to the use of the proposed name is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date.

Clematis paniculata rubra.—Parentage, Clematis paniculata X C. viticella rubra; description, color of flowers, deep carmine; size and shape of flowers and manner of blooming are the same as those of C. paniculata.

March 19, 1909. W. N. RUDD, Sec'y.

Owner has been in business 25 years and wishes to retire. For terms, address,

C. CRAMER, R. F. D. No. 4,
Salt Lake City, Murray Station, **Utah.**

RECENT BOOKS.

Les Fleurs De Pleine Terre.

This monumental and encyclopedic work has just been issued in a fifth edition, with an introduction by M. Philippe de Vilmorin. Briefly, it may be said to be a huge compendium in French of all the flowers, annual, biennial, hardy and bulbous that can be grown in the open, and included in it are various selections for various purposes, the time of planting, etc. There are over 1,800 black and white illustrations, besides several colored plates. The arrangement is alphabetical, and under the name of each plant is given the etymology, family varieties, habitat, culture and propagation. There are several colored plans by the imminent French landscape artist, M. Ed. Andre, and when we say that the work contains 1,375 pages, it will easily be seen that it is one far too comprehensive and voluminous for us to do other than refer to in the most superficial manner. At the end we notice a useful list of the names of flowers in English, German, Spanish, Portuguese and Italian. There is also a glossary of botanical and horticultural terms employed in the book, a list of authors quoted, and much other useful information. As a work of reference to those who know French "Les Fleurs de Pleine Terre" will be invaluable. It is published by the well known firm of Vilmorin-Andrieux & Co., Le Quai de la Mégisserie, Paris.

P.

Scotch Gardens.

A very superficial acquaintance with American horticulture reveals the fact that there are many gardeners of Scotch descent settled down in the United States. To those who have still an interest in the country of their birth or origin, we draw attention to a handsome edition de luxe entitled "Scottish Gardens," by Sir Herbert Maxwell. Square demy in form, containing over 250 pages, well printed and most artistically bound, this book ranks as one of the most attractive that has recently issued from the press on horticulture. There is a series of handsomely colored full paged plates, comprising 32 in all. The opening chapter is an essay on Scottish gardens in general, and the text contains a representative selection of different types, old and new.

Among the places treated are Ardgowan Whitehouse, Pollok, Castle Kennedy, Malleny, Kellie Castle, Cawdor Castle, Manse of Fyvie, Balcarres, Carnock, Dalzell Castle, Dunrobin', and others. There are three appendices, which deal with rhododendrons and other shrubs, herbs and bulbs suitable for the climate of Scotland.

P.

The Sweet Pea Cult in England.

The sweet pea, with its special society to foster its culture, is going on apace, and evidence of its hold on public favor may be gauged by the several cultural treatises that have recently appeared. The most modern is a handy little manual of 112 pages, well printed, freely illustrated and compiled by H. H. Thomas, a well known horticultural writer and editor of "The Gardener." The work is entitled "Sweet Peas and How to Grow Them." The price in England is equivalent to 25 cents.

P.

Truthful and Accommodating.

M. S. Foreman, a florist of Louisiana, Mo., wants a representative in New Canton, and has asked me to act as such. They deal in cut flowers, plants, funeral emblems and wedding decorations. I don't know any more about flowers than a rabbit, but if you want them I'll order them for you.—New Canton Press.

Pittsburg.

MARKET CLEANS UP DAILY.

The carnation market is showing surprising strength, all grades and colors selling out nicely each day. Roses are more plentiful and job lots can be bought at low figures. The call for American Beauty is good but the quality is a little off. Orchids and gardenias are slow. Bulb stock took a brace and, with the exception of daffodils, cleans up nicely. Violets are plentiful and sell well at low prices.

NOTES.

At the Phipps conservatories in Schenley park, Foreman Jones has on exhibition an African lily (Crinum fimbriatum) which was brought from Africa by a lady who was with Prof. Garner learning the monkey language. The flower is white with a delicate pink stripe running down the center of each petal.

The "open all night" idea is getting to be quite popular on the north side. E. C. Ludwig began it a couple of years ago and recently Fritz Ueberle put up the same sign and on March 15, G. & J. W. Ludwig opened at 626 E. Diamond street. They all run stands in the market also.

Elmer Jolliffe, formerly with J. B. Murdoch & Co., has gone to Philadelphia to accept a position with W. E. McKissick & Bro.

Ernest Zieger has returned from the east where he was looking up good things for Easter.

Visitors: John Walker, Youngstown, O., and Thos. Murdoch, Titusville. J.

Highland Park Greenhouses
FRITZ BAHR, Proprietor

Telephones 85 and 78

Highland Park, Illinois, March 8, 1909.

AMERICAN FLORIST CO.,

For goodness' sake stop the Lucille Ad. We are unable to fill our orders. I am more than ever convinced that if the AMERICAN FLORIST don't bring answers to an Ad. no other paper will.

Yours,

FRITZ.

Mr. Bahr had a three-quarter page Ad in two consecutive issues of THE FLORIST, February 27 and March 6, and on March 8 wrote the above.

It will pay YOU to advertise in our

Special Spring Number

Which Goes to Press March 31

Let us have your copy early for best display and position.

AMERICAN FLORIST CO.,
324 Dearborn St., CHICAGO

Longiflorum Giganteums **Easter Lilies.** Our reputation as to these flowers for Easter has been established for years. Grown by the most critical grower from the most expensive bulbs. Packed at the greenhouse and shipped in original packages direct to the consumer. No bruised or inferior flowers. You can't afford anything but the best in this line at Easter time. Get our prices. They are no more than you will pay other places for an inferior article.

Our White Lilac in now of the larger variety—especially fancy stock, and the crop is large enough to warrant the special low price we now offer it. **$1.00 per bunch.**

If you do not receive Our Cut Flower Price List regularly and are interested, drop us a line.
Also large supply of all other Seasonable Cut Flowers. Headquarters for both Single and Double Violets.

A. L. RANDALL CO., 19-21 Randolph Street, Phone Central 1496. Private Exchange All Departments. **Chicago**

Chicago.

AMERICAN BEAUTY AGAIN IN CROP.

Receipts have been a little freer the past week, but the market still cleans up each day fairly well. American Beauty roses are once more in full crop with the large growers and the supply is again equal to all demands. The quality has also materially improved. Other roses are also coming in gradually increased quantities, with quality of the leading varieties about all that can be desired, everything considered. Carnations are in a little better supply, although the demand for funeral work keeps the price of white stock rather high. The fact that the carnation market has been inclined to continue rather stiff has been of material advantage in the disposal of bulbous flowers. Tulips, daffodils and southern jonquils have been moving very satisfactorily. Little freesia is now to be seen. Easter lilies are in better supply, and these with the callas are about sufficient to supply the existing demand. Sweet peas are selling very well, with both quantity and quality to be had. There are still too many violets coming in.

NOTES.

Bassett & Washburn were the fortunate winners of the first prize at Buffalo for American Beauty roses, and as there were seven entries, the honor was a well earned and well appreciated one. This firm also took second on Killarney among five entries. Saturday night the boys at the Hinsdale greenhouses celebrated the event with beer and cigars at the expense of their employers.

J. A. Valentine stopped off three days in this city, returning from the Buffalo rose show and the earlier Cincinnati meeting of the S. A. F. executive committee, leaving for the west March 22, He will call at Des Moines, Ia., on his way to his Denver home.

The loquat is in fruit in the conservatories at Washington park, Chicago, and those interested should visit them for the display of flowering plants there just now is very fine.

Watch the "Our Pastimes" column for the smoke of the local bowling team. If the present vim and interest keep up some crack scores are sure to be made. (See page 466.)

H. Schmitz, formerly of the St. Boniface cemetery, has bought the Hubert Hanson place at 4016 N. Clark street. Possession will be given April 1.

C. C. Pollworth and wife, of Milwaukee, and J. A. Valentine, of Denver, Colo., were among those attending the funeral of Mrs. Hauswirth on Monday.

Peter Reinberg has just begun cutting from a big crop of American Beauty roses. Field roses are also coming in fine at this time.

W. N. Rudd delivered a much appreciated address before the Jacksonville Ladies' Club March 20, on the uses of trees and shrubs.

It has been rumored that our genial friend, Joe Smely, of Aurora, has been asked to become a candidate for mayoral honors.

Geo. Reinberg has a fine crop of American Beauty roses just coming on. He is also cutting some very fine cattleyas.

WM. W. ABRAHAMSON

Florists' Purchasing Agent.

For buyers of recognized standing, I will undertake to save money, as well as obtain the most satisfactory stock the entire market affords. Write me about it.

21 Wabash Avenue, CHICAGO.

Mrs. C. W. McKellar has been called to Paris, Tex., on account of the serious illness of her mother.

Fred Lautenslager, of the Kroeschell Bros. Co., is home again after one of his extended trips.

Edward Amerpohl, who was in town Monday, is to build three new houses at Janesville, Wis.

The unexpected death of Earnest Weeber is chronicled in our obituary column.

Zech & Mann expect to be well fixed on the lily proposition for Easter.

Anton Then has a fine stock of lily plants ready for Easter.

O. P. Bassett and wife left Wednesday for Hot Spring, Va.

C. W. McKellar is showing some fine Dendrobium nolile.

Visitors: Prof. L. R. Taft, Agricultural College, Mich.; H. Van Teylingen, representing Van Zanten & Co., Hillegom, Holland; R. A. Latham, Minneapolis, Minn.; A. L. Glaser, Dubuque, Ia.; John Pauli, Davenport, Ia.; Edward Amerpohl, Janesville, Wis.; F. C. Weber, Jr., St. Louis, Mo.; J. A. Valentine, Denver, Colo.; C. C. Pollworth and wife, Milwaukee, Wis.; J. G. Frisz, Vincennes, Ind.; B. Eschner and E. J. Fancourt, both of Philadelphia, Pa.

Illinois State Fair.

Robert O'Dwyer of the Illinois State Board of Agriculture has secured an appropriation of $2,616 for the horticultural display at the state fair to be held at Springfield September next. With this appropriation he has the rotunda of the Dome building for his display.

With a view to interesting growers outside of the city and precincts, Mr. O'Dwyer has raised the premiums on stove and greenhouse plants, palms, etc. It has been thought that there was, if not collusion among growers, at least no great emulation to do better than has been done while the few premiums given were not sufficient to attract growers from a distance. The premiums on stove and greenhouse plants will this year be $75, $60, $40 and $30. For 12 palms $30, $20, $15 and $10 will be offered; for six palms, $12, $8, $6 and $4; for two, $7, $5, $4 and $3; for one, $4, $3, $2 and $1. Mr. O'Dwyer has evidently the good of the show at heart and it is to be hoped that these premiums will bring out a creditable display from other cities, from which the cut flower exhibits are usually good.

It is satisfactory to note that Mr. O'Dwyer has got all he asked for the department of floriculture, without a dissenting vote, from the State Board of Agriculture. For space he has got the whole rotunda in the Dome building, and a raise of $116 in appropriation, making $2,616 in all. The premium list is now in the press or about ready for press.

EASTER PROSPECTS GOOD.

Business was dull during the past week with falling prices. There were good sales of pots of shamrocks for St. Patrick's day but that event made little impression on the cut flower trade. Rose prices have been steadily dropping and special American Beauty has touched 25 and 30 cents, with a corresponding decline in tea roses. As forerunners of Easter, rambler and other rose plants; fine pots of lilac, rhododendron, hydrangea and other plants are now seen in the retail stores. There is a stiffening in the prices of cut lilies, due to the approach of Easter. While four cents is the best that is being paid for even fancy carnations, this stock as a rule, in all grades, cleans up better than roses. Good tulips and the best narcissus are not in over supply, but much southern narcissus is finding its way to street trade. The prospects seem good for Easter trade and there can be little doubt that there will be an ample supply of both pot and cut stocks to supply all demands.

March 22.—Conditions in rose stock are not encouraging, American Beauty being practically a glut with specials selling at 15 to 25 cents. Carnations move freely at nominal figures. The demand for orchids and gardenias is very light, but considerable movement is noted in the minor stocks at low figures.

FLORISTS' CLUB OUTING.

The annual outing of the Florists' Club, it is announced by the committee, will be held Thursday, July 1, at Whitestone Landing, L. I. Breakfast will be served at 12 noon and dinner at 6 p. m., after which there will be a moonlight sail on the sound in the steamer Isabel. The steamer will leave the city as formerly at 10 a. m. Further announcements will be made later. The next monthly meeting of the club will be held in the rooms, Grand Opera house building, April 12, at 8 p. m. On account of deferred and new business, this meeting is likely to be a very interesting event. Vice-president-elect F. R. Pierson of the American Rose Society, ex-president Traendly of the S. A. F., A. M. Henshaw and others who visited the Buffalo convention and exhibition are expected to be present and talk interestingly of what they saw there.

NOTES.

Strong pressure is being brought to bear on the members of the assembly, especially those who are on the committee of cities, to vote against the Francis bill giving the national academy of design a site for a building in Central park. The east side is particularly interested, and many clubs in connection with the settlements have taken the matter up and passed resolutions upon it.

Julius Roehrs, Sr., Rutherford, N. J., wife and daughter, sailed for Europe March 23, on the Kronprinzessin Cecille, and intend visiting the international flower show at Berlin. They will probably be absent all summer.

Geo. Gerharty, manager of Dunlop's Toronto, Ont., visited this city last week in the interest of his firm. Mr. Gerharty was formerly a well known figure in the cut flower trade of the wholesale district.

Geo. Hildebrandt, of John Young's wholesale store, who has been very ill, was able to visit the store March 22, and it is expected that he will soon be in harness again.

L. B. Craw, of Lord & Burnham Co., who recently underwent a delicate surgical operation, is said to be progressing favorably toward recovery.

Interior and exterior views of Chas. Millang's busy store on West Twenty-ninth street are given in this issue on pages 426-427.

European Horticulture.

FROM THE FRENCH TRADE PAPERS.

BEST ROSES OF THE YEAR.—The prizes at the celebrated Bagatelle rose competition in Paris in 1908 were all awarded outside France. Had not M. Pernet-Ducher withdrawn from competition his Lyons rose would, perhaps, have led; as it was Rhea Reid, of the E. G. Hill Co., carried off the honors for America, receiving a gold medal. Dorothy Page Roberts, of Dickson & Sons, a large sulphur yellow tea, lighter at the tips of the petals. Madame Segond-Weber, magnificent large salmon-pink rose on a long firm stem. (Soupert and Notting.) Mistress Dudley Cross, a pretty chamois yellow tea rose, shaded with pink—(Wm. Paul & Sons). Frau Oberhofgaertner Singer, very beautiful hybrid tea of a deep pink color outside, lightly silvered within; bud quite long, stem long and stiff—(P. Lambert), took honors in the order named.

THE funeral at Troyes of the veteran pomologist, Chas. Baltet, was an impressive and solemn occasion. He was accorded the military honors due to his rank in the Legion of Honor; the pallbearers were the mayor of Troyes, the presidents of academic and horticultural societies and civil dignitaries and friends. The procession was led by the Academic Society of the Aube, the Horticultural Society of the Aube, the Association of Former Pupils of the National School of Horticulture, and the Society of St. Fiacre. After the hearse followed the two oldest employes of the house, bearing the decorations of the deceased, the servants, the family, the representative of the prefect, the city council, Commandant Aynie of the first chasseurs, and officers, and many distinguished men. Addresses were made at the cemetery by six gentlemen representing different associations, with whom M. Baltet had maintained close relations during his active and influential life.

BURGER'S PELARGONIUMS.—An example of what may be accomplished by persistent effort along a line of plant improvement, singled out from among many, is furnished by Burger and his new race of pelargoniums. Not so very long ago on his little place at Halberstadt this man of limited resources but extraordinary foresight began to raise his first seedlings, then the result of crosses within the confines of varieties known as English pelargoniums. The mating of these with zonal geraniums later on resulted in forms, more nearly resembling true hybrids with characteristics not possessed by any type comprised in the genus. Patiently pursuing his chosen path in the field of progressive horticulture it eventually led up step by step to achievements that like few others in recent years, aroused so great an interest at every exhibition and so unstinted a measure of laudatory comment in the horticultural press. Burger's pelargoniums are indeed, as admitted by everyone, a distinctly new race, represented by some 30 or more varieties, differing slightly as to habit of growth, but furnishing a wide range in color of bloom, some of the varieties producing flowers of strikingly novel tints or color combinations, not heretofore displayed by pelargoniums of whatever class. The chief characteristics, briefly enumerated, of Burger's pelargonius are uniformly compact, dwarf growth, deep green, very firm foliage, flowers carried just above and clear of the foliage, coming in densely set, immense clusters, several of these clusters always fully out with others in bud-form constantly in their wake, an unbroken succession of bloom from early in March until winter sets in.

RIVIERA NOTES.—The narrow strip of coast region lying east of the river Var and nestling close under the snow-capped heights of the Alpes Maritimes, which here approach nearest the shore line, constitutes the warmest portion of the Riviera. But already at Nice the abruptly receding higher alps give way to mountain spurs of lesser altitude, interspersed with fertile valleys and more freely exposed upland plateaus. Here and in particular at Hyéres and Toulon, violets, anemones and all kinds of bulbous flowers are grown in astounding quantities for the northern markets. Between Nice and Cannes the more important kinds of cut flowers are grown and shipped from here to all parts of Europe, including the remotest northern points of Russia and Scandinavia. The largest establishments are located in this section of the Riviera, favored by the most congenial of climates and richest of soils. Foremost among main crops are carnations, immense masses of them everywhere. American sorts have not been tried here to the extent that might have been expected. Most of the sorts grown are the cream of seedlings as raised here by everybody in large blocks every year. Seed-bearing carnations are grown in pots and grafted on gypsophila roots, which imparts greater resistibility to fierce sunheat and incidental overwatering or rather its consequences. Wide areas are grown to roses and all other species of flowers and decorative greens that keep and travel well in long transit. Of novelties in the cut flower line, as here grown extensively, the blue marguerite—Dimorphotheca Ecklonis—sent out by Pfitzer, Stuttgart, and the newer forms of Gerbera Jamesonii, covering large spaces at Cap d'Antibes and meeting with ready sales all the year round, deserve mention. Great quantities also of egg-plants, tomatoes, peppers, melons, strawberries, etc., are raised here at every turn. Very interesting, too, is a visit to some of the large seed-growing establishments, located here, as for instance that of the firm of Vilmorin, Andrieux & Co. at Antibes.

FROM THE GERMAN TRADE PAPERS.

AMARYLLIS HYBRIDS.—The first one of the many hybrid forms of amaryllis now under cultivation was raised in 1810 by a watchmaker in England, Johnson by name. He had crossed Hippeastrum vittatum with H. reginæ, and although subsequently in the course of now nearly a century many thousands of fine hybrids were raised in all parts of the civilized world, none so far surpasses or even equals Amaryllis Johnsonii in ease of culture and general utility, says a writer in Gartenwelt. It is still the most favored, the most extensively grown for all purposes, under glass in the north and in small and large freeland plantations throughout the southern states of America and the warmer countries of Europe and Asia. At present, continues this authority, we have among the great number of newer originations many indeed much finer in some respects than the old Johnsonii, especially as regards size and color of flowers, but in the number of flowers on one stalk, in certainty of production and duration of bloom, and above all in the matter of inherent vitality and willingness to freely form offsets, Johnsonii is still the winner in the race for highest appreciation. Many of the very finest of new hybrids refuse to form offsets or produce them so sparingly that by this method of reproduction the number of individual plants of a variety is but slowly increased from year to year; the writer having had one for 14 years without securing a single side bulb. The most complete collections to be found at the present time, he says, are those of Major G. L. Holford, Robert P. Ker & Sons and James Veitch & Sons, all in England, besides scores of collections of lesser magnitude to be found in all countries devoted to floriculture.

TRADE FAIR.

Business is moving along quietly with a rather short supply of flowers. Carnations, particularly white ones, are scarce and prices have advanced to $4-$5 per 100. The sweet pea crop has also shortened up and violets are visibly on the wane. Roses are in good supply and move off very well, the only laggard being Mrs. Jardine which has to be pushed. This is a beautiful flower but for some reason is not favored by most buyers. Lilac is about done. Harris is cut out and La Croix whose stock this winter has been so fine, is done for the season. The cold spell of the past few days has held back the southern daffodils but the next two weeks will see great quantities of the blooms thrown on the market. Orchids are scarce, 50 cents straight being the quotation for cattleyas. The shipping trade is good for the season, there being quite a demand from out-of-town buyers for week-end sales. Asparagus sprays are scarce and the bunches smaller. There never seems to be much of a surplus of this useful article at any time and it should prove a profitable stock for the grower. Hardy ferns require no pushing these days; the new case opened up by the dealer lucky enough to have it is cleaned out in a hurry; the price has advanced to $2 per 1,000.

EASTER PREPARATIONS.

The Easter trade is now the general topic. The out-of-town buyers are already about looking the stock over and making their selections. The outlook is good as many orders are already booked. Robert Craig says prospects are very bright as buyers are coming around earlier than usual and buying liberally. At Harris' they say they are booking orders every day and anticipate an excellent business. Other growers talk in much the same strain.

The news that the Florex Gardens, North Wales, are about erecting another mammoth house 175 feet wide by 700 feet long is creating considerable interest amongst the trade here. The management here is largely the same as at the greenhouses at Edgely, where they were the first to build houses 50 feet in width, which structures by many who were supposed to be authorities on greenhouses were considered impracticable. They would not stand the weight of snow or sudden strong high winds and would be difficult to beat. Time has shown, however, that these theories were incorrect and such houses are now considered standrd and many duplicates have since been erected. The experience with this extra large structure has evidently been satisfactory to the management. It has not blown down nor been destroyed by weight of snow nor found at all difficult to heat and very fine stock has been cut from the ground and benches contained therein. Hence the new house on a larger scale. To show its immense glass area the order has been given for 3,000 boxes. Work will commence early in the spring and it is hoped to get it roofed in before winter. K.

Philadelphia Spring Show.

An exhibition of the best of everything in spring flowering bulbs would almost describe the spring exhibition of the Pennsylvania Horticultural Society that opened its doors to the public on Tuesday of this week. There were other interesting features but the tables of hyacinths, tulips, lily of the valley and daffodils were the center of attraction. They were remarkably well done and the judges had a difficult task in awarding the prizes, the competition being so keen. The varieties of hyacinths for the H. F. Michell Co., prizes were all specified so that in this respect all entries were alike. The varieties were L' Innocence, La Grandesse, Kohinoor, Queen of Blues, Grand Maitre, and Moreno.

The premium list for narcissi and tulips also contained the varieties to be grown. In this way only the best and newest sorts were brought so that the latest advance in these classes was seen. Cineraria stellata was in evidence but not to such an extent as in former years; the plants were very well flowered; callas were very attractive there being several entries of large pots of plants carrying four to six flowers each. The yellow callas, Rossi and Solfaterre, attracted much attention. Primula obconica grandiflora as grown by Messrs. Batchelor and Robertson was a revelation. Such stock would sell in any store on sight. The heads of bloom were like geraniums and of a deep rose color. Spirea Gladstone was conspicuous there being several large entries of well flowered plants. Lilium Harrisii was exhibited by several growers, one double stalk over seven feet in height being shown. Wm. Robinson staged some magnificent wallflowers such as had never been seen here before.

A new and rare plant which received a first class certificate of merit was the specimen of Gloriosa superba Rothschildiana or the climbing lily of Africa. It carried a number of blossoms red with a gilt edge, a very striking flower. The H. A. Dreer Co., exhibited a table of the new fern, Nephrolepis Scholzeli which shows up very well as the stock is increased; it is a great addition to this type. The feature of the cut flower exhibits was the collection of sweet peas staged by Wm. Sim, of Cliftondale, Mass., which was awarded a silver medal. These were the best ever seen here. Such flowers as these will certainly enter more largely into competition with other greenhouse favorites in the near future. The new white carnation, Georgia, was shown, as was also a fine striped variety like Bradt, by T. J. McCormick of Baltimore, and M. Thaw of Govans, Md., exhibited a good collection. On the rose table was new variety called Radiance which received a certificate of merit. This is a flower of about the size of My Maryland but with shorter buds and dark pink in color. There were two vases of My Maryland one from the originator John Cook, Baltimore, Md., and the other staged by E. Towill. C. W. Stevenson and Robt. Scott & Son staged a vase of Mrs. Jardine as did Wm. Kleinheinz, all showing very fine flowers. The center of the large hall was decorated by Habermehl Bros. with palms and flowering plants in vases on pedestals. In the lower foyer the H. A. Dreer Co. and H. F. Michell Co. had exhibits of seeds and garden requisites. Of the awards Samuel Batchelor receives 14 firsts, and 10 seconds, Wm. Robertson, 16 firsts and 16 seconds, Wm. Kleinheinz, four firsts and 10 seconds, John McCleary, 21 firsts and five seconds, Wm. Fowler, two firsts and one second and John Hedland, one first and three seconds.

K.

Boston.

EASTER PREPARATIONS.

The Lenten dullness is being endured with the utmost patience by traders, with whom the principal object of attention is the planning for the Easter business. The usual spring market prevails, bulb stock overwhelming in variety as well as quantity. Jonquils and tulips of innumerable varieties are being dealt out in tremendous quantities. But little of this sort of stock goes to waste as the bargains offered usually clear up the market every day. The first of the Easter crop of lilies is being cut and shows splendid quality. American Beauty roses are gradually reaching the normal scale and sell fairly well in spite of the splendid line of Killarney available. While American Beauty is bringing $6 per dozen an equally desirable Killarney is offered for $3 and $4. Richmond continues as the most disappointing rose of the year. At no time this season has it shown the disposition and favorite traits of the rose as remembered the last two seasons. Carnations are showing the first signs of weakness usually apparent about this time, and minor quantities of top notch stock is procurable. A deluge of spring novelties is displayed, each grower sharing the honors for something choice and pleasing to offer the buyers. Judging from present appearances the Easter market will be amply supplied with the best assortment and also the best type of flowers ever shown on the local market. Plant growers are in the ascendency as is shown in the display of fine plants in every store.

NOTES.

John McFarland of North Easton is cutting from his usual stock of Ulrich Brunner roses, one of his leading specialties. This rose is entering the market at just the right time in the absence of American Beauty, and offers exceeding satisfaction.

Saturday was a holiday among the growers and although in the midst of the busy spring season, the time was well spent in attending the exhibition of the Music Hall growers.

John Cassidy of W. E. Doyle's Boylston street store is scheduled for jury work the next few weeks. B.

Boston Flower Market Annual Show.

The annual exhibition of the Boston Co-operative Flower Market was held March 20 in the spacious quarters of the organization and was a huge success. Promptly at 12 noon, the doors were opened to the public, the judges having completed their labors. A grand display of commercially grown flowers and plants, was tastily arranged on the platforms. The exhibition was easily viewed from all sides and thousands of people passed to and fro along the aisles commenting on the splendid stock. A distinct innovation, greatly increasing the interest in the exhibition, was the display of fancy specimens of up-to-date funeral emblems, of which there was a magnificent collection showing to advantage the combination with the artist's skill of the choicest of the season's blossoms.

The rose section occupied the center of the hall and here were found all the leading favorites of the day in prime condition. American Beauty, Killarney (pink and white), Richmond and My Maryland were the favorites in the order named, together with a collection of Bride and Bridesmaid of rare quality. Next in importance was the section devoted to carnations: this display brought together for comparison the finest types of present day varieties. Bay State, Albert Roper's recent origination, was the center of attraction and was in splendid form. John Barr of Natick showed a vase of Beacon that easily took first honors. The violet display had a large entry list. All the classes presented the closest competition and judgment was difficult. N. F. Comley carried everything before him in the sweet pea class and the sweepstake prize was awarded to this grower for winning the largest number of first prizes. Miscellaneous displays of cut stock and plants surrounding the attractions from the retail stores completed the exhibition.

Thomas Roland carried off the honors in the plant department. From the John Walker establishment at Salem an enviable assortment of choice novelties was greatly admired. John McFarland showed a vase of wonderful gardenias which was one of the greatest favorites in the entire show. R. E. Lassman was represented in this section with a vase of ranunculus. The exhibition was a credit to the organization and the thanks of the entire craft is extended to the committees so ably handling the details. The awards follow:

Medium Grade Roses,
$5.00, $6.00 and $8.00 per 100.

B.

ALBUQUERQUE, N. M.—Byron H. Ives, the pioneer grower here, is enlarging his greenhouse plant by the addition of 33,000 square feet of modern glass. He will also install a new 85 h. p. boiler and, with his increased facilities, he intends to grow more for wholesale as well as keeping his retail trade going. A carload of 18 tons of glass has already arrived on the ground, probably the largest order ever sent here. The work is to proceed right away.

SYRACUSE, N. Y.—Mrs. Emily Rose Youell, wife of Henry R. Youell, superintendent of the Herald's Gardening Club, died of heart failure March 16, at the family home, 111 Lexington ave., aged 67 years. Mrs. Youell had been ailing some time with bronchitis, but her death came very unexpectedly. Mrs. Youell was born in England, the daughter of John Emily Hubbard, a noted veterinary surgeon. Mrs. Youell was married to Henry R. Youell 40 years ago. She is survived, besides her husband, by three daughters and a son. The family have the sincere sympathy of the trade in its bereavement.—B.

Specific Duty Opposed by Treasury Dept.

We have received from one of the best possible sources the following information, showing how, at the last moment, all the united work of the seedsmen in the country was blocked by action of the treasury department, in which that department made the misleading statement that there were 500 different varieties of garden seeds which made specific duty impractical. Thus the work of the seedsmen was turned down without time or an opportunity for rehearing or denial of such a misleading statement. The telegram reads as follows:

"Amendments defeated in committee by letter from treasury department received last day of the session stating specific duties impossible because there were more than 500 different varieties garden seeds. Will write fully."

Every American seedsman should now write to his representative and senator asking and insisting that the specific duty be put into effect in the new tariff. Perhaps the most effective work could be done by those seedsmen whose personal representative or senator is on either the senate or the house tariff committees; the lists are below.

Names of the Committee on Ways and Means in the House of Representatives:

Sereno E. Payne, Chairman.

John Dalzell.	Nicholas Longworth.

Joseph W. Bailey, of Texas.
James P. Taliaferro, of Florida.

New Hampshire's Proposed Seed Law.

We present herewith the text of House Bill No. 396 of the New Hampshire legislature, designed to regulate the sale of agricultural seeds, introduced by Mr. Marden of Chichester, and referred to the committee on agriculture:—

Section 1. Every lot of agricultural seeds, including the seeds of cereals, grasses, forage plants, vegetables, garden plants and white pine trees, but not including those of other trees, shrubs and ornamental plants, which is sold, offered or exposed for sale for seed in bulk or package of one pound or more, within this state, shall be accompanied by a plainly written or printed guarantee stating first, its percentage of purity from foreign seeds and other matter, and, second, its percentage of vitality.

Sec. 2. Sellers or dealers in seeds may base their guarantees upon tests or analyses conducted by themselves, their agents, or by the secretary of the State Board of Agriculture or his agents; provided, that such tests or analyses shall be made in such a manner, and under such conditions as the said secretary may prescribe.

Sec. 3. The results of all tests or analyses of seeds made by the said secretary, together with the names and addresses of the persons from whom the samples of seed were obtained, shall be published annually in a bulletin by the New Hampshire College Agricultural Experiment Station, and biennially in the report of the State Board of Agriculture. The said secretary shall also publish from time to time in the Quarterly Report of the State Board of Agriculture equitable standards of purity and vitality, together with such other information concerning agriculture seeds as may be of public benefit.

Sec. 4. Whoever sells, offers or exposes for sale or for distribution, within this state, any agricultural seeds heretofore named in this act without complying with the requirements of sections one and two, or whoever, with intention to deceive, wrongly marks or labels any lot of agricultural seeds, including the seeds of cereals, grasses, forage plants, vegetables, garden plants and white pine trees, but not including those of other trees, shrubs and ornamental plants, as pertains to their percentage of purity and vitality, shall be punished by a fine not exceeding two hundred dollars for the first offense, and not exceeding two hundred dollars for each subsequent offense. Municipal courts and trial justices are hereby vested with original jurisdiction concurrent with the supreme judicial and superior courts, to try, and upon conviction to punish, for all offenses against the provisions of this act.

Sec. 5. The provisions of the four preceding sections shall not apply to any person growing, selling, offering or exposing for sale cereals and other agricultural seeds for food.

Sec. 6. The secretary of the State Board of Agriculture shall diligently enforce the provisions of sections one and four of this act, and in his discretion prosecute offenses against the same.

New Tariff Law—A Bad Feature.

The following paragraph applying to the administration of the customs act will increase the difficulties of the already overburdened importing seedsmen. This paragraph reads:

> The actual market value or wholesale price, as defined by law, of any imported merchandise which is consigned for sale in the United States or which is not actually sold and freely offered for sale in usual wholesale quantities in the open market of the country of exportation to all purchasers shall not in any case be appraised at less than the wholesale price at which such or similar imported merchandise is actually sold and freely offered for sale in usual wholesale quantities in the United States in the open market to all purchasers, due allowance by deduction being made for estimated duties thereon, cost of transportation, insurance and other necessary expenses from the place of shipment to the place of delivery, and a reasonable commission not exceeding 10 per cent if any of the same has been paid.

Some have explained this as applying only to consigned goods and not to goods actually purchased, but in the opinion of eminent attorneys this paragraph really applies to all importations made to this country which as the law says "are not freely offered for sale in usual quantities in the open market of exportation to all purchasers."

O. V. ZANGEN, Hoboken, N. J.

It will be readily seen that, once this authority is given to the treasury officials, practically every shipment of garden seeds of the varieties coming to the American trade, for which naturally there is no open market in European ports of export, will by this paragraph be appraised and made to pay duty according to what the treasury officials may claim to be the "usual wholesale quantity price in the United States." Under this law no American seedsman can hope to import his seeds under a duty based on his real contract cost. Instead of amending the law to fit the contract conditions of the seed season and horticultural trade generally, the above paragraph only adds to the difficulties, making more contentions and differences of opinion possible.

To produce seeds under right cost conditions requires two years' cultivation and advance contract arrangements. They cannot be produced in a month or a day or a week as can articles of ordinary manufacture contemplated by the present law. Why not then in making the new Payne tariff bill make it fit the true conditions which horticulture demands and give the seedsman the benefit of the contract market prices according to the conditions of his contract crop to which he is as assuredly entitled as if he were a merchant handling products which could be produced by machinery in 30 days. The law can be made to fit these conditions. If it did, and the law was easily and plainly administered without any friction under specific duties, would it cost any reduction among the salaried employes of the treasury department? Even if it should, is that a sufficient reason for denying justice to the horticultural trade generally or for even making an attempt when the great growth of horticulture in this country demands that the old and impractical law as applied to it be done away with.

The Trading Instinct.

The enclosed clipping is from a Conway correspondent of Greenfield, Mass., Gazette and Courier. Conway is the village famed as the birthplace of Marshall Field and Wm. C. Whitney.

> Just received 50 bags of grass seed. It is rather more than I want myself. Would sell some of it at the right price. I guess it is good seed. The fellow whom I bought it of said it was. I don't believe he would lie about a little thing like grass seed. Try it. If it comes up over half mullein or straddle top bring it back and get your money. (That is if you pay when you get it.)—New York Sun.

[Hawley, the birthplace of Albert Dickinson, is about 11 miles from Conway.—Ed.]

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

PLANT horseradish sets early and deep in good soil for results.

FROM Vancouver, Wash., growers report a great demand for greenhouse grown lettuce.

ALLENTOWN, PA.—A crop of tomatoes, valued at $10,000, was destroyed in a fire at the greenhouses of Daniel Kroninger, March 13. The fire started from a defective flue.

THE bulletin published by the New York Experimental Station at Geneva on "Potato Spraying Experiments in 1908" should be of interest to potato growers all over the country.

MANY growers who have not heretofore used it are coming to understand the value of lime as a sweetener of soil and as an agent to unlock other chemical constituents in the soil. Two to three tons per acre is a good dressing.

Notes in Season.

Parties who are interested in forcing rhubarb, asparagus and parsley should prepare stocks for future work. It takes several years to work up roots of forcing size of either rhubarb or asparagus, and all three crops mentioned do best by early seeding or the very first opportunity the ground can be worked. Asparagus and parsley are slow to germinate. A good plan is to prepare the seed for early germination, which should however only be attempted where one is sure to watch it carefully, otherwise it would be inviting disaster. About two weeks before we expect to sow, we place the seed into flats, water well, cover with cardboard, paper or burlap, sprinkle this covering and then cover with glass to prevent evaporation and also to exclude mice. Every day we stir the seds thoroughly and moisten if needed and thus bring them as near as we dare to the germinating point. When ready to sow, either expose for a short while to sun and wind, or mix with some dry substance so they will work in the seed drill. These seed flats should be placed in a uniform temperature, such as in a hotbed or under a greenhouse bench.

Asparagus can be sown deeply to advantage, say one and one-half inches to two inches to insure steady moisture. Parsley will be best at about one-half inch only, and rhubarb is very sensitive to covering. We prefer to drill rhubarb very shallow and expect the first rain to sprout it, as it comes up quickly. Among asparagus varieties, Palmetto easily leads. In rhubarbs, most markets demand the red-stalked varieties, such as Victoria and St. Martin's. For greenhouse use be sure to use the best triple curled parsley, as the plain is not decorative. In a cold spell if short of covering material for hotbeds and cold frames, do not forget that a very little hay, straw, or coarse manure scattered over sash is a wonderful protection and will often save the contents.

MARKETMAN.

I ALSO GROW LARGELY SEEDS ON CONTRACT.

List of my novelties in flower seeds for 1908 sent on application.

Making Hotbeds.

ED. AMERICAN FLORIST:—

I made a hotbed some weeks ago in a rather exposed position following the directions of the late Wm. Scott in his "Florists' Manual." He says, "Shake the manure out as soon as it shows signs of heating, spread a layer of about four inches, tramp and water well, continuing to spread layers of four inches, tramp and water again till it is the required height, 18 inches or two feet." I had to confine my bed to the width of my frame but I placed two 12-inch boards to protect the bed. As the bed began to heat a high cold wind came along and cooled it off and it is no good. I have now another pile ready to spread and would like to ask you if tramping is necessary, or if one could shake the manure out and allow it to settle. Is it right to wet the bed down as it is being made? I see that you say that water will destroy the heat as readily as it will put out a fire, and understand by that, that no water should be used on the manure when making the bed. Your reply to these queries will be very much appreciated as also any further directions you can give.

P. T.

Michigan.

During our long experience with hotbeds, we have rarely found it necessary to use water on the manure; we may say never, if we used fresh barn manure, such as we get from the city barns. Sometimes we would use the coarse parts removed from mulches on strawberry beds, or winter-protection from shrubs, and when this is dry we would have one man hold the hose while the heap was thrown up, or turned. In no instance have we ever soaked manure as it was put into the frame. If wet manure does heat well, it will surely cause excessive moisture in the bed later on, which is to be avoided. Having been uniformly successful with hotbeds, we have great faith in our methods.

As pointed out in our recent article, after a hotbed is made, it should immediately be covered with sash, and this means tight sash. If the weather is cold, better use mats, shutters or litter on top of sash to prevent any loss of heat. Thus treated, a bed will heat up thoroughly in 48 hours, so much so, that it will be necessary to ventilate or the heat and moisture may warp the sash badly. Tramping a bed is a good practice because it at once shows us any soft spots; further, it prevents to some extent fire-fanging, as loose manure will heat too violently. If "P. T." used 6-foot sash, and his bed was no wider and exposed all around to high cold winds, success is doubtful. If such a bed can be built against some building, or tight board fence, it will do well. We like to build a board fence wind-break on the north side of hotbed sites, then start the first bed against this fence and build one against the other so the whole block is warm.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

VISITED CHICAGO.—J. W. Maher, Devil's Lake Nursery, Devil's Lake, N. D.

FUR FARMS are recommended for Canada as a means of conserving timber lands and forests.

TROY, O—The Southwestern Nursery Co. has been incorporated with capital stock $10,000. L. A. Coppock, N. D. Coppock, C. M. Redmond, C. N. Peters and R. H. Gibson are incorporators.

QUITE a number of testimonials from users of the V. I. fluid and other sprays made by Wm. Cooper and nephews, Chicago, have reached us, showing the very satisfactory results obtained by their use.

IN a heavy soil it is generally acknowledged that hybrid perpetual roses do better than teas or Bourbons, these preferring a lighter soil. In all cases it should be well drained as roses dislike "wet feet."

ACCORDING to the report of the chief inspector of the Division of nursery and orchard inspection, of Ohio, the San Jose scale is still the most destructive insect pest to nursery stock, fruit, shade and ornamental trees in the state. Last season, owing probably to extended drought, it multiplied more rapidly than ever before since it has been under observation by the department.

MEN who know the culture of the plants they handle, can write or speak of them clearly and convincingly and are also willing to impart their knowledge to others, are only too scarce. Such an one is Geo. D. Leedle of Springfield, O., as indicated by his paper, read at the recent Buffalo show, and which appears in this issue. Nurserymen and others devoted to the rose will find it very interesting and instructive.

THE blue rose may not be an accomplished fact but Ellwanger & Barry of Rochester, N. Y., are offering Veilchenblau (violet blue), a seedling from Crimson Rambler that is hailed by German growers as the forerunner of a genuine blue rose. The flowers are described as reddish pink at first, then purple, amethyst and, finally, steely blue. The plant is vigorous and hardy and the yellow stamens are said to show up in strong contrast to the petals.

THE members of the Holland Nurserymen's Union are protesting bitterly against the proposed increase of duty under the proposed new rates, claiming that the higher rates actually mean an assessment of 100 per cent on many items, running up for some qualities nearly 300 per cent of the present invoice value. They mean particularly conifers, shrubs above two feet, etc. They say: "Taxing trees and conifers on the thickness of the stems seems an oddity." The unpacking and measurement of the different trees for fixing the duty would mean an immense amount of work, loss of time and possible loss of plants by decay or drying out.

American Association of Nurserymen.

ANNUAL CONVENTION AT ROCHESTER, N. Y.

The thirty-fourth annual convention of the American Association of Nurserymen will be held June 9 to 11 at the Hotel Seneca, Rochester, N. Y. Reduced railroad rates (fare and three-fifths) have been secured from all parts and as the meeting is to be held in the oldest and largest nursery district of the United States it is safe to prophesy a very interesting and successful meeting, for the Rochester nurserymen and citizens can be depended upon to do all in their power for their visitors' entertainment. It is typical of the association to read that the general reception committee is composed of "every nurseryman in western New York."

It is proposed to hold one session only each day, from 9 a. m. till 12:30, thus allowing ample time for the many points and things of interest to nurserymen in and around the city to be seen. The manager of the Hotel Seneca is evidently anxious to do all in his power to make the members comfortable and is giving free of charge a room for the secretary's use, also the large ball room for the meetings and the use of any other rooms they have. Meals are served on the European plan but these and the cost of rooms will not average higher than the usual American plan, especially when friends are willing to share rooms. Ample space for exhibits is provided by the rooms mentioned above and the association wishes it to be widely known that it invites exhibits of tools, implements and everything else used by nurserymen as well as stock. Apply to Thos. B. Meehan, Dresher, Montgomery county, Pa., chairman of the committee on exhibits, for space and to Geo. C. Seager, secretary of the association, for other business details.

American Ass'n. of Park Superintendents.

As announced in our telegraphic report of the Buffalo meeting last week, the American Association of Park Superintendents decided on Seattle, Wash., as the meeting place in August next, but the last day, August 12, will be spent in Tacoma. The following made application for membership: Wm. I. Hock, Reading, Pa.; John Berry, Colorado Springs, Colo.; H. B. Filer, Buffalo, N. Y.; The Board of Park Commissioners, Winnipeg, Man. All were recommended favorably for the next annual meeting.

Secretary-Treasurer Mulford read a report, showing that there were three honorary members and 103 active members at the last annual meeting since when three members have resigned and one, A. Pinoteau of La Fontaine park, Montreal, Que., has died. The treasurer's report showed $294.10 collected and $402.23 expended, and a balance of $60.93 on hand. The annual bulletin and report have been printed and copies of the latter sent to the commissioners in all cities where there are members. Nearly 150 copies were sent other superintendents with a view to interesting them. The report was adopted and the president and secretary-treasurer were authorized to push the canvas for members. J. W. Thompson, Seattle; Theo Wirth, Minneapolis, Minn.; President John W. Duncan, Boston, Mass., and Secretary-Treasurer Mulford, Harrisburg, Pa., were appointed a committee of arrangements for the Seattle-Tacoma meeting. A vote of thanks was extended to the Buffalo Board of Park Commissioners and to John F. Cowell for the entertainment so courteously extended to the executive committee.

Rochester Nurserymen Win.

The public service commission has ordered the American Express Co. to provide a general collection and delivery service for all parts of the Twenty-first ward of the city of Rochester, N. Y., from March 15 to May 1, inclusive, and from September 15 to November 1, inclusive, of each year. The order became effective March 15. The Twenty-first ward of the city has a large number of shippers of nursery stock who contended that they were not provided with collection and delivery service, whereas a number of nursery stock producers located in other parts of the city at as great or approximately as great a distance were given service. This is the first matter in which the commission has made an order requiring service beyond the limits designated by the express companies.

Landscape Gardening.

COURSE AT THE UNIVERSITY OF ILLINOIS.

Two years ago the University of Illinois established a four-years' course in landscape gardening which is now well on its feet and, Professor Wyman thinks, it has reached the stage where it can safely appeal to the interest and co-operation of the friends of landscape gardening in the state. The instructors would be glad of suggestions offered and also to answer any questions in reference to it. The course comprises work with drawing and water colors, design and perspective, landscape materials, trees, shrubs, etc., with their propagation, handling and enemies, botany, engineering and other subjects.

It is proposed to correlate with this a more purely horticultural course for those who do not wish to go into landscape design but desire to execute or maintain landscape work as superintendents and gardeners or to cultivate the material as nurserymen. The course would be based on soil study through chemistry and agronomy and of trees, shrubs and perennials together with their botany, evolution, propagation, culture and enemies, fruit and greenhouses. Elementary landscape design, free hand drawing and water colors are also included.

New Ordinance to Guard Chicago Trees.

The city forester, the new official who is to be arbiter of the city's shrubbery and devise new sartorial designs for Chicago treedom, has his duties defined for the first time in an ordinance drafted by Howard W. Hayes, assistant corporation counsel. Once the new office begins operations not a tree can be planted or removed from outside the building line without his permission and he will have absolute power to dictate how they shall be trimmed.

The new official is to be under the jurisdiction of the small parks commission. He will receive a salary of $2,000 a year and the property owners are not to pay any fees for permits or his services. Under the ordinance trees cannot be planted in the street closer together than 25 feet. They also must be at least two feet from the established sidewalk line. The hitching or tying of horses or other animals, or the pasting or tying of bills or other articles on trees is prohibited. Salt water must not be

thrown on tree banks, and a special clause directs the gas and other companies to repair any leaks in pipes which might affect trees. When new buildings are being erected, guards are required to protect the trees. Dumping of stone or cement around their bases at any time is prohibited. Fines of from $5 to $100 for each offense are provided for violating any provisions of the ordinance.

Cannot Ship Stock.

Nurserymen in Nevada county, California, are getting their troubles. The county has no horticultural commissioner and the express company refuses to accept for transmission any nursery stock as a consequence, fearing complications with the law should any nursery shipments prove to be infected or diseased in any way. Orders have been placed with local nurserymen, who are unable to ship their product, owing to this ruling. Were there a commissioner to inspect all nursery stock and pass it as fit for shipment, matters would be entirely different. As it is, the local growers are losing considerable money. They are debating sending to Sacramento for a deputy commissioner to come here and inspect the nurseries, that they may be enabled to fill their orders.

Hamamelis Mollis.

Among the many beautiful winter-flowering shrubs there is probably none to excel hamamelis, commonly known as wych hazel. There are several beautiful varieties, but none to excel or even equal the above Chinese species. We have a plant here between five and six feet in height, well proportioned and literally wreathed with its attractive flowers, which forms a most conspicuous object in the shrubberies. It began to open its showy flowers the first week in January, and the severe frosts which we have experienced have not appeared to injure it in the slightest. Though slow growing, it has done remarkably well since planted here on our stiff, retentive soil in a position fairly southwest, and no one who is interested in beautiful shrubs, especially for flowering at this season, should fail to add it to their collection.—The Garden.

New Florida Fruit.

One of the coming new fruits that will add to the reputation of Florida is thus described by the Eustis Lake Region: "The new fruit, Tangelo, was shown the editor this week by Frank Savage, who has propagated it, the tree having this year 19 of the fruit. It is a cross between the pomelo and tangerine. The flavor is like the grapefruit, and the skin or rind like the tangerine. Great things are expected of it." The citrus fruits of Florida are capable of further hybridization, producing new fruits, but they can hardly be improved on for flavor.—Jacksonville Times-Union.

Announcement.

We beg to announce we will grow and disseminate the new seedling Carnation **MARY TOLMAN,** originated by A. E. Hunt, Evanston, Ill.

MARY TOLMAN is a new light salmon pink, of a somewhat warmer tone than Enchantress,, and does not fade on the edge of the petals, having a clear, even shade all over the flower, which measures from 3 to 3½ inches, although 4inch flowers are very common. The stem is long and stiff, holding the flower perfectly erect. The calyx is very strong, and, as a producer, it comes early, is very free and continuous.

Orders booked now for January 1910 delivery: $12.00 per 100: $100.00 per 1000.

A. E. HUNT & CO., Evanston Ill.
HUNT BROS., Park Ridge, Ill.

Chicago Carnation Co.
JOLIET ILL.

St. Louis.

GOOD PRICES OBTAINED.

Trade has been slow all week, according to reports from retailers but the wholesalers have no cause to complain as stock has brought good prices and but little has gone to waste. Carnations have held up 2½ to 5 cents and good roses 6 to 10 cents. Sweet peas are improving daily and a fine crop can be expected for Easter; in fact, fine crops of both roses and carnations are due. If cool weather continues this will help bulbous stock as a heated spell would probably curtail the supply for Easter and stiffen up prices considerably on carnations and roses. A good supply of lilies and other plants is looked forward to. All the principal retailers have fine window displays in which bulbous stock, fine flowering plants and cut flowers in great variety are used with good effect.

NOTES.

Some very fine carnations and roses are coming to C. A. Kuehn from Canfield & Belle Miller of Springfield, Ill., also a good supply from Fred. Ammann of Edwardsville.

Arthur Ellison of the Ellison Floral Co. returned from Chicago Monday after making heavy plant purchases for the Easter trade.

The spring flower show opens this week and all hands are busy and anxious to make it a success.

Henry Baer of Peoria, Ill., is sending very fancy stock to H. G. Berning which brings top prices.

F. C. Weber, Jr., left for Chicago on a business trip.

Will Osseck is still walking very lame.

W. F.

GREENWICH, CONN.—The Bridgeport sheriff attached the $18.000 Renault automobile and other goods of James Everard of New York on a florist's bill for $1,240. The deputy sheriff started a parade of the automobile and several carriages through the village, towed by two teams, but was stopped by Mr. Everard's attorney, who gave security for the goods until a surety bond could be made out. The bill was incurred for a party that took place on December 1. The house was elaborately decorated by McMillen. When the bill was presented the price was considered exorbitant. Mr. McMillen's firm turned the bill over to a collector who refused to make any terms except for the full amount of the bill.

LAPAGERIA HINTS.—Lapagerias and, without doubt, many other good things for house and garden are not at all grown to the extent their merits entitle them to, and all because their perpetuation is difficult. Lapagerias seldom produce vital seeds, are hard to propagate by either cuttings or layers and exasperatingly slow in running up to numbers by oft repeated division. Now a method is pointed out by one who has practiced it for years with unvarying success, that in point of expediency excels all other modes of propagating lapagerias and plants of like nature. It is to cut pretty firm but not too hard canes of top growth into pieces of about a foot in length, to remove the leaves, to bend it so as to form a spiral nicely fitting in a flower pot and held there by being at every point in close contact with the inner walls of the pot and leaving a hollow space clear in its center, which is then filled up with sandy soil and given a good watering. The so stocked pots are stood over bottom heat or plunged in the sand or other material of the warm propagating bed, are kept moist and with the advent of sprouting growth around their rims are placed nearer to the light and within the reach of fresh air, until the growth is strong enough to be separated into single plants and transferred to more suitable quarters.

J. L. DILLON, Bloomsburg, Pa.

Minnesota State Florists' Association.

The regular monthly meeting was held at the hall on Snelling avenue, St. Paul, March 16. J. M. Underwood of Lake City, one of the directors, and C. N. Cosgrave, secretary of the State Fair association were present, also G. M. Reburn, of Vaughan's Seed Store, Chicago. O. J. Olson of the flower show committee reported the laying of the matter before the St. Paul Institute of arts and sciences and the favorable attitude shown by that body. At his suggestion the president was authorized to appoint two additional members to the committee, these to be chosen from Minneapolis. E. Nagel, of the State Fair committee reported progress and outlined a plan for distributing the premiums. A. S. Swanson made a minority report and offered a resolution requesting the members to abstain from making exhibits at the fair until better facilities can be had for staging and displaying exhibits. After a heated discussion in which the fair managers claimed their hands were tied in the matter the resolution was lost.

Mr. Frasier of the State Experimental Station gave a very interesting talk on fertilizers and was accorded a hearty vote of thanks for same. The judges awarded prizes to exhibitors as follows: Honorable mention to Hans Rosacker on Princess of Wales violets scoring 79 points; and to E. Nagel & Son on Primula obconica scoring 79 points. L. Boeglin of the Park greenhouses exhibited Primula denticulata grandiflora, a very pleasing flower for outdoor culture. The association adjourned to meet April 20.

S. D. DYSINGER, Sec'y.

Chrysanthemum Robinsoni.

This chrysanthemum is one of the prettiest additions to the group of herbaceous marguerites. We have recently spoken on several American varieties about which a lot of noise has been made, says the Revue Horticole. In Europe, too, new remarkable seedlings have been obtained of which unfortunately the exact parentage is not always registered. Such is the case with Chrysanthemum Robinsoni. It is more probable that it is a descendant from Chrysanthemum maximum, the prettiest of its kind. The variety in question is very closely allied to C. laciniatum and C. filiferum but much superior in regard to its beauty and size of flowers. The petals are split, laciniated and slightly fringed which gives the flower a very elegant appearance. Cayeux & Le Clerc, seedsmen of Paris, say this chrysanthemum is very vigorous and free flowering. It is of medium habit, that is to say, slightly dwarfer than C. maximum, the culture being the same. It is not a tender plant but can by no means be called hardy in France. Extreme cold, however, if planted in a moist locality seems to affect it slightly. It is a very useful flower for cutting purposes, having long, erect flower stalks. The flowering season for this variety closes towards the end of September.

The Home of of Linnaeus.

It is over 100 years ago since Carl von Linné (Linnaeus), the father of botany, died. Not only does his house still stand within six miles of Upsala, but the rooms are furnished just as he left them. The same pictures are hanging on the walls, and the clothes he wore just where he used to hang them. His herbarium cases are still there, but the plants he collected and dried are in London in the home of the Linnean Society, much to the regret of the Swedes.—Gardening World.

The New Crested SCOTTII FERN.. NEPHROLEPIS SCHOLZELI

NEPHROLEPIS SCHOLZELI

This crested sport of Scottii will hold the same position to all the crested forms of Nephrolepis that Scottii now holds to the Boston. It is entirely distinct from all others and will become even more popular than its parent, with which it is identical in every way except that the pinnæ are subdivided, giving it a beautiful crested appearance.

We have shown the plant at the exhibitions noted below and have been awarded the following honors:

SHAW GOLD MEDAL, St. Louis Horticultural Society, Nov. 3rd, 1908, for "Best plant, of decided merit for cultivation, not previously an article of North American commerce."

SILVER MEDAL, Offered by the Society of American Florists, through the St. Louis Horticultural Society, Nov. 3rd, 1908, for "The most meritorious plant or flower of American origin".

CERTIFICATE OF MERIT of the Horticultural Society of St. Louis, Nov. 3rd, 1908.

SILVER MEDAL, Pennsylvania Horticultural Society, Philadelphia Nov. 3rd, 1908, for the best new plant.

CERTIFICATE OF MERIT, Massachusetts Horticultural Society, Boston, Nov. 6th, 1908.

CERTIFICATE OF MERIT, Dutchess County Horticultural Society, Poughkeepsie, N. Y., Oct. 30th, 1908.

CERTIFICATE OF MERIT, Morris County Gardeners and Florists' Society, Madison, N. J., Oct. 30th, 1908.

CERTIFICATE OF MERIT, Chestnut Hill Horticultural Society Philadelphia, Pa., Nov. 4th, 1908.

We are booking orders now, which will be filled in strict rotation June 1st, 1909.

PRICE: **Per doz., $3 50; per 100, $25.00; per 1000, $200.00. Twenty-five supplied at hundred rate and five hundred at thousand rate.**

HENRY A. DREER, 714 CHESTNUT STREET PHILADELPHIA, PA.

Vancouver, Wash.

Business at present is very fair and prospects for Easter are good. Pansies are in brisk demand, showing an increase over previous years, as are roses and good shrubbery.

C. M. Weintz has accepted a position as chief gardener at the Vancouver barracks where many improvements are under way.

Eugene Zimmer reports a considerable increase in the demand for cut flowers.

Mrs. Woodward has been very ill the last week. W.

Plant Leaves Injured.

ED. AMERICAN FLORIST:—

We are sending you, by this mail, sample leaves of geranium, calla and Primula obconica which are attacked by disease. Can you tell what this is, also cause and remedy? The disease attacks the outer edge of the leaf first and spreads towards the center. Any information will be appreciated.

Kentucky. FLORIST.

The geranium and primula leaves have been attacked by a fungus (Botrytis), that is the cause of great injury to many plants of widely separated families. The same fungus may have attacked the calla, but this cannot be positively determined from the one leaf submitted for our examination. The presence of botrytis usually suggests lack of ventilation, and too great an amount of moisture in the greenhouse. Giving attention to these conditions, and removing all infected leaves will help to check the spread of the disease, but in addition we advise "Florist" to spray the plants with dilute Bordeaux mixture, using four pounds of copper sulphate and four pounds of lime to 50 gallons of water. Directions for preparing this and other fungicides will be found in Farmers' bulletin 243, which will be sent free, on application to the secretary of Agriculture, Washington, D. C. A. F. W.

R. M. CANDY, Langhorne, Pa.

Davenport, Ia.

The Tri-City Florists' Club held a meeting March 18 at the outing club. The following officers were elected:

C. O. E. Boehm, Davenport, president.

Harry Pauli, Davenport, Harry Gaethje, Rock Island, and John Staack, Moline, vice presidents.

John Temple, Davenport, recording secretary.

Theo. Ewoldt, Davenport, financial secretary.

Wm. Knees, Moline, treasurer.

Executive committee—L. Stapp, Rock Island, A. Anderson, Moline, Harry Bills, Davenport.

The next meeting will be held at the residence of Wm. Knees in Moline, April 8. Arrangements have been made for a banquet to be given at the outing club, March 25.

HEADQUARTERS FOR

ARAUCARIAS

"By jingo," was the remark of a bright looking gentleman, as he stepped with his lady friend into one of our Araucaria houses. "If these are not the best shaped and finest looking specimens of **Araucaria Robusta Compacta, Glauca** and **Excelsa** I have ever seen, *then I am a shade.* Just look! What a sight this time of the year, one as nice as the other!"

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen. As big as an elephant, for 75c; as big as a jumbo, for $1.00; and as big as a holy terror, for $1 25 to $1.50.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

PREPARE FOR EASTER

From Whom Will We Purchase Our Easter Supply?

From our old friend, Godfrey Aschmann, of course. He has been our man in the past, and will be the man this year: he also will be the man in the future. He has always treated us right. What he advertises he has and he is no bluff.—An immense stock of **Choice Easter Plants** now ready for immediate shipment. Blooming Easter week or before if desired.

If you would know the fairest sight your eyes can ever see,
Where the most perfect plants are grown, to Aschmann's come with me.
Why! Ne'er since flowers began to bloom was such a glorious show
Of all the best that florists need, found in one place to grow.
The lilies are the very best yet seen on Easter day,
Azaleas are whole sheets of flowers perfect in every way.
The Araucarias matchless are so are the ferns all green,
With bulbs, and plumed Spirea, the best you've ever seen
And Aschmann gives a challenge let every florist hear,
For flowers or prices, either, no rival does he fear.
If you wish to gather dollars like violets in the spring,
Then send your largest order, his plants the cash will bring.

AZALEA INDICA.

We are headquarters for these plants for the past twenty-five years. We make a specialty of importing large quantities of this so well known favorite Easter novelty Grown for us in Ghent, Belgium, by an Azalea specialist Have now three houses full of the choicest. Only well known American varieties are imported. They are planted in the fall, as soon as they arrive from Belgium, into 6, 7 and 8 in. pots, planted in greenhouses and kept cool during winter. They are now in excellent condition, covered with buds, just right for Easter.

☞ We only ship good stock and full of buds and flowers

☞ If you need Azalea plants, don't look in vain around the country for bargains, but come or write direct to us. We will be able to supply you with the best obtainable in the American market at moderate prices.

☞ What is the name of the best double pink Azalea? Mme. Van der Cruyssen is the name. Originated by the well known Azalea specialist, Mr. Van der Cruyssen of Belgium. Millions are raised every year and shipped into every part of the globe from Belgium. We have a big stock on hand of this well known variety. Every plant is as round as an apple, covered with buds just right for Easter. Have all sizes for 60c, 75c, $1.00, $1.25, $1.50, $1.75 to $2.00 each.

Deutsche Perle (double white) 75c, $1.00, $1.25 to $1.50; Bernard Andreas Alba (white) we have mostly big plants of this variety, $1.50, $2.00, $3.00 to $3 50, a few at 75c, $1 00 to $1 25; Niobe (also white), 75c, $1.00, $1.25, $1.50 to $2.00 each.

Vervæneana, De Schryveriana (double variegated), 75c, $1.00, $1.25 to $1.50; Dr. Moore and Memorie de Louis Van Houtte (double pink), $1.00, $1.25 to $1.50; Apollo (red), 50c 60c, 75c to $1.00; other good varieties, such as John Llewellyn, Empress of India, Talisman, Helena Thielmann, Illustre, etc., 50c, 60c, 75c to $1.00; Professor Wolters, 75c, $1.00 to $1.25.

When we are out of one color we send the next similar color; also if we are out of the size ordered, we send the next size, either above or below the price mentioned.

☞ Outside of the Deutsche Perle we have none of the small sizes of white to offer. All the small sizes of Niobe and Bernard Andreas Alba lost their buds during the winter and in transportation from Belgium. They never do good the first year, but are fine the next year.

☞ All the other varieties which we advertise are tip-top No. 1 stock.

Easter Lilies. Lilium Multiflorum, the genuine Japanese Easter lily, directly imported by us. We have a friend in Japan who looks after our interests there. He picks out for us only the good, healthy ones, and marks them while they are growing, the 10-in. bulbs, and therefore he ships to us the cream of the plants of Japan. We have Lilies this year to burn; can supply, if nothing happens, every customer and others who want Lilies. If you see them growing in our greenhouses, you must all admit they are "crackerjack9"; we sell them cheap, too. Where other florists get 15c per bud, we only charge you 10c per bud for plants in 6-in. pots, having 5, 8, 10 and more buds to the plant. Plants under 5 buds, 12c per bud, 6-in. pots. Strictly no lilies will be sold by themselves. A reasonable order of other plants must be taken with lilies.

Jerusalem Cherries, large plants, full of buds, 6 to 6½in. pots, 35c, 50c.

Moonvines (Ipomœa Multiflora), best white Moonvine, for which we have a world-wide reputation, now ready, 2½-in. pots, $5.00 per 100.

Hybrid Rose Bushes, grafted, long plants, 30 inches to 3 feet high, John Laing Brunner, Magna Charta etc. 6-in. pots, 50c, 75c to $1.00. **Rambler Dorothy Perkins,** etc., 5½ in., 50c; **Hermosa,** 5 in., 35c; 6-in., large stock, 50c.

Begonia new improved Erfordi, 5-in., $2.00 per doz ; **Begonia Flambeau** 5-in. $2.00 per doz

Spirea Gladstone. This variety, owing to the dry summer in Holland last year, is very scarce this Easter, but we were fortunate enough to secure sufficient to fill our usual house, and the plants are now in fine condition, full of buds, just right for Easter, 6-7 in. pots, 50c, 75c to $1.00 each. Spirea Floribunda, Japonica and Superba, 6-in. pots, 25c, 35c to 50c.

Primula Obconica, 5-in., $2.00 to $2.50 per doz.

Double Daffodils, Von Sion, best yellow, 3 bulbs in a 5-6 in. pot $2.50 to $3 00 per doz. pots.

Hyacinths, 4 best colors, King of the Blues, Grand Maitre (light blue), La Grandesse (best white), Gertrude (best pink), 4-in., $12 00 per 100.

Asparagus Plumosus Nanus, 3-in., $5.00 per 100.

Hydrangea Otaksa, in bud, 6-7 in. pots, 50c, 75c to $1.00 each.

Cineraria Hyb. Graddiflora, H. F. Michell's new improved strain. Our plants of this strain are twice the size of those of other years, with perfect, large, green foliage. Some of the plants are almost as large as a bushel basket. 6-in. pots, 25c, 35c, 50c, 75c to $1,00 each.

Areca Lutescens, 4-in., 3 plants in a pot, 25c.

Ficus Elastica (Rubber), 5½ to 6 in. pots 25c; 30c, 40c to 50c.

Boston Ferns, 6-in. pots, 50c; 7-in. pots, 75c; $1,00 to $1.25; 8-in. pots, $1.50.

Scottii Ferns, 5½-in. pots, 40c; 6-in. pots, 50c; 7-in. pots, 75c to $1.00; 8-in. pots, $1.50.

Whitmani Ferns, 7-in., as big as a bushel basket, 75c, $1 00 to $1.25; 9-in. pans, as big as a washtub $1.25 to $1.50.

Neph. Amerpohli, 5¼, 5½ to 6 in. pots, 30c, 40c and 50c; 6-in., 60c to 75c.

Kentia Belmoreana, 5 good leaves, 5¼ to 5½ in. pots, 25 to 30 in high, 50c to 60c; 4-in., 35c.

Kentia Forsteriana, 6 to 7-in. pots, 25, 30, 40 to 45 in. high, 75c, $1.00 $1.25, $1.50 to $2 00 each.

Kentia Forsteriana, 5¼ to 5½ in. pots, 20 to 25 in. high, 50c, 60c to 75c.

FROM THE FRENCH TRADE PAPERS.

WINTERING OF CRIMSON RAMBLER ROSE.—German gardeners experience difficulties in the wintering over of large sized, permanently established Crimson Rambler roses, of which they make extensive use in the covering of arbors, wayside trellises and balustrades. Every expedient resorted to as a possible safeguard against winter-killing has proved ineffectual in nearly every instance, it is reported. All sorts of devices have been tried, but each one so far failed to entirely save the plants from damage. The best of these, better than the wrapping in straw or the mantle of mattings, is said to consist of the removal of every leaf from the vines in late fall, laying the plants down and covering with earth. But even with this soil protection the roses suffer severely and much of their wood, when released in the spring, is dead. In answer to all these complaints a noted rose expert gives it as his opinion, based on many years of observation and practice, that Crimson Rambler, thus most painstakingly wrapped up and covered, sustains greater injury than any roses of the same class, the same size and in the same garden, not protected at all against the rigors of winter. He found that under careful protection it is in every instance the old, well hardened wood that suffers most, often being killed outright, while the young growth of the previous year is never harmed in the least.

New Dahlias Ready for delivery April 1.

Jack Rose (Decorative) Rich velvety crimson, early and free flowering on long stems. An ideal cut flower.

Virginia Maule (Decorative) Delicate tint of shell pink, it certainly is the coming commercial Pink Dahlia.

Princess Victoria (Show) Pure Canary yellow, without shade or blemish from bud until old age.

Ethel Schmidt (Show) Pure white, flushed delicate pink, dotted and penciled crimson.

Sensation A new double Century, vivid vermillion, heavily tipped white.

Big Chief A new double Century brilliant cherry red, margined rich velvety maroon.

Gladys (Century) Each petal has a brilliant rose crimson center, divided from the broad rosy pink edge by a white penciling.

Fringed 20th Century Similar to 20th Century in color, the petals are deeply cleft giving it a fringed appearance

Rose Pink Century Clear rose pink, immense size perfect form and of great substance.

Fringed Beauty Another fringed Century, large white overlaid and suffused soft rosy lake.

50c each, $5.00 per doz., $35.00 per 100; except Princes Victoria which is $1.00 each; $10.00 per doz.

For prices on one of the best collections of Standard varieties at $2.00 to $6.00 per 100, see our General Wholesale List.

For Geraniums and miscellaneous greenhouse stock see issue of March 20th. For early vegetable plants see vegetable advertisement.

A DISCORDANT NOTE.—The German Orchid Society, organized some years ago under the most promising auspices, now intends to end its influential existence. At its next meeting the question of "to be or not to be" will be brought up for final discussion. Several of the most prominent of the German horticultural societies are striving to take the discouraged orchidists under their wing as one of their subordinate branches, but affiliation in any manner proposed is strongly objected to by the 300 and odd remaining members of the Orchid Society, now preparing for dissolution. With it the publication of its official organ, "Orchis," a well-conducted monthly magazine, is also to be discontinued.

ORVILLE, PA.—Geo. Samtman, formerly superintendent at the Florex Gardens, North Wales, has bought the large greenhouses here.

Washington.

TRADE FAIR.

The Lenten dullness has been felt by all, and stock during the early part of the week moved slowly. There are a few dinners during these dull days, given for the most part for the new members of the diplomatic corps, arriving, or old members departing. There is also a wedding here and there to stir up a little interest. Owing to the extra session of congress and the new cabinet, it is safe to predict that the flower buying folk will remain late in the Capital city.

NOTES.

H. Summers, the lycopodium king, takes pride in his excellent plans of it, and it keeps him busy supplying the local retailers.

Minder Bros. have some very good Easter stock, which they are disposing of rapidly.

Gude Bros. are cutting some excellent Killarney, Richmond and American Beauty roses.

Geo. C. Shaffer had a busy day Saturday, mostly funeral work and boxes of flowers.

J. H. Small & Sons used a great many Easter lilies in decorations the past week.

W. Marche & Co. had several good orders for funeral work the past week.

G. S.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At Chicago.

There was a large and enthusiastic attendance of the bowlers at Bensinger's alleys, 118 Monroe street, March 19. There were 18 on hand including E. F. Winterson, who left before the regular games scheduled below came off. They were divided into three teams under A. Zech, Otto Goerisch and Frank Pasternick, with results as follows:

A. ZECH'S TEAM.

T. Erickson	121	141	179
E. Schultz	158	135	144
F. Armstrong	132	90	124
J. Michaelson	118	143	152
A. Zech	221	149	163
Totals	750	658	762

OTTO GOERISCH'S TEAM.

J. Kruchten	125	109	132
F. Johnson	146	133	..
H. Kruchten	139	158	121
M. Tribble	84	85	95
O. Goerisch	125	118	..
J. Byers	..	..	139
J. Zech	..	..	216
Totals	619	603	703

FRANK PASTERNICK'S TEAM.

F. Pasternick	108	152	143
F. Ayers	144	127	134
M. Jensen	95	117	118
Wm. Graff	190	115	147
F. Krauss	107	68	84
Totals	644	579	626

Bowling is scheduled at the same alleys for every Friday evening from now on and it is hoped the attendance will steadily grow. Several of the ladies have indicated their intention of being out this week and it is hoped they will be joined by a large number of their sisters.

At Washington.

The florists bowling team played a rather exciting game with the Saengerbund team; the following are the scores:

FLORISTS.			
Cooke	124	219	178
Shaffer	211	165	206
Hamner	162	168	216
Ernest	153	183	178
McLennon	203	171	191
Total	853	906	969
SAENGERBUNDS.			
Machler	194	221	192
Burdine	229	193	173
Redeker	222	136	227
Eckstein	190	227	180
Miller	186	158	163
Total	1021	935	935

G. S.

Twin-City Bowlers.

The Minneapolis bowlers "put it all over" the St. Paul brethren at the contest March 19. The following score tells the sad tale:

MINNEAPOLIS:			
T. Wirth	111	133	106
L. Boeglin	132	151	151
C. N. Ruedlinger	173	166	175
H. Will	160	145	146
K. Carlson	125	126	146
Total	701	721	724
ST. PAUL:			
S. Dysinger	118	136	124
Carl Haugen	145	158	107
J. Dill	143	102	134
N. C. Hansen	129	120	163
O. J. Olson	103	157	147
Total	638	673	675

FELIX.

Albany, N. Y.

St. Patrick's day caused a demand for large numbers of carnations, tulips, and roses tinged green with aniline dye. The demand for these monstrosities in flowers seems to be on the increase from year to year, but calls vividly to mind the needlessness of painting the lily or tinting the rose.

NOTES.

At its last regular meeting the Florists' Club decided to go ahead with the arrangements for holding a flower show next fall in one of the public halls of the city. It is proposed to charge a nominal sum for admission to the exhibition, the proceeds to be divided equally among several charitable institutions in the city after all necessary expenses shall have been deducted. Fred A. Danker was appointed chairman of the general committee by President Goldring. With Mr. Danker were named: Alfred D. Wemple, secretary, and Louis Menand, treasurer. Chairman Danker proceeded to name a number of sub-committees as follows: Hall, Patrick Hyde (chairman), Alfred E. Whittle, Thos. B. Snare, Fred Henkes, Harry W. Riggs and Edmund S. Hazeltine. Programme, printing and advertising, Edward F. Meany (chairman), Wm. C. Gloeckner, Wm. F. Roche, Frank M. Briare and John H. Moran. Decorations and arrangement of exhibits, Samuel Goldring (chairman), Wm. C. Kurth, Wm. C. King, Philip Bender, John Murnane, Frank Coonley and J. H. Sanders. Premiums and selection of judges, Edward P. Tracey (chairman), Wm. Hannell, J. H. Snyder, Rhinebeck, L. Woods, Fishkill-on-Hudson, C. Sullivan and P. Warner.

Generous responses are being made to the offer of the state forest, fish and game commission to supply to citizens, municipalities and corporations within the state small trees for planting, at the rate of $4 per 1,000. The object of the commission is to encourage the reforestration of areas devastated by the axe and fire. The commission has placed an order with a German firm for 1,000,000 trees to supplement the supply raised by the state. Already orders have been received in this city for 1,500,000 white pines. Commissioner Whipple is urging the planting of at least 50,000,000 trees in the state within the next five years. As an object lesson the state has undertaken to plant 25 acres of its land at the Margaretville fish hatchery in Delaware county.

20 Years in Service

MOREHEAD
Return Steam Traps

Have been in use by florists for over **20 Years.** Could a better proof of efficiency and satisfactory service be furnished.
The Floral Establishment of Mr. George Reinberg, Chicago, Ill., is equipped with **24 Morehead Traps.**
Repeat orders. See the point?

STEEL Return Tubular BOILERS
The Most Economical Type of Boiler for Greenhouse Heating. Highly Recommended by Well Known Florists.
JOHNSTON HEATING CO.,
138 East 31st St., NEW YORK.

Arthur Cowee, gladiolus specialist, Berlin, was in the city recently and showed a Ponderosa lemon, weighing 22 ounces, raised in the greenhouses of J. E. Sambrook & Co. in Berlin. The lemon was one of 11 borne by a tree which is five years old and three and a half feet high. Mr. Cowee reports an increased demand for his bulbous stock owing mainly to the short crop last season in many parts of the country due to the drought. He has refused a number of large foreign orders so that he could fill more readily the many domestic orders he has received. He is thinking of increasing the area under cultivation this season.

Geo. Russell of Whittle Bros., is a bowler of local fame. Recently he went to Utica and in a match rolled high total, three games 718, and broke the record for that city.

R. D.

EAST DEFIANCE, O.—Karl Scharffenberger has let to Geo. M. Garland, Desplaines, Ill., the contract for his new greenhouses of steel and concrete construction. The houses will be 44x100 feet.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order We have just purchased at a forced sale **50,000,000 ft. Brand New Lumber and Timbers,** which we offer at prices lower than your local dealer can supply the same grade.
Estimates Furnished Free, Our Greenhouse Engineer will furnish you with any estimate on anything you may require in the Boiler, Heating Material or Building line. **Write for price list on Iron Pipe.**

7-500 horse power Babcock & Wilcox water tube boilers with B. & W. chain grates, about 5 years old: 160 lbs pressure. Also complete coal and ash handling apparatus capable of of taking care of these boilers.
4-250 horse power **Heibe** water tube boilers with Oliver patent grates: 100 lbs. pressure.
1-125 horse power **Morrison** corrugated furnace, internally fired boiler, 125 lbs. pressure.
1-48x21 locomotive fire box boiler. 60 horse power. 100 lbs. pressure.
24-Horizontal tubular boilers, triple riveted: ½-in. shell. ⅝ heads: with Murphy Furnace and stokers on all boilers: also coal and ash handling apparatus for these boilers.

Greenhouse Boilers. A complete line of locomotive, fire box boilers. Kroeschell Greenhouse boilers, Return tubular boilers, Cast Iron Sectional boilers, etc.: some are rebuilt, some brand new, but all are in first-class condition for further service.

1—150 horse power fire box boiler.
Good for 60 lbs. pressure. Free from patches, bulges or blisters. Complete with all fittings.
We want to move this boiler quick and quote a special price of..... **$600.**

Boiler Flues. Fitted with special threads and couplings. Can be used same as threaded pipe and fitted with calked joint greenhouse fittings at the end of the run. These flues have the same strength as wrought iron pipe and are offered at about half the price. Any size desired.

6-72x20 horizontal tubular boilers, quadruple riveted: 50 4½-in. tubes: 110 lbs. pressure.
4-72x18 Horizontal tubular boilers, 100 lbs. pressure.
4-72x16 Horizontal tubular boilers, 95 lbs. pressure.
2-66x16 Horizontal tubular boilers, triple riveted, **Butt** strapped, 140 lbs. pressure.
8-60x16 Horizontal tubular boilers, 100 lbs. pressure.
2-54x16 Horizontal tubular boilers, triple riveted, butt strapped, 125 lbs. pressure.
2-48x14 Horizontal return tubular boilers, butt strapped, double riveted: 125 lbs. pressure.

HOT BED SASH at EXTRAORDINARY LOW PRICES.

TRADE ERRATIC.

Business the past week has been very irregular, some days quite brisk and on others nothing doing. Roses, with the exception of Richmond and American Beauty, are coming in larger quantities; the quality was never better. Prices as a result have weakened considerably but on an average are better than last year. Carnations seem to be going off crop and the prices have stiffened on some colors, very noticeable being white. The prospects for Easter for carnations seems like a short market, for the heavy crop will be in the end of April or the first half of May. Easter lilies are short of the demand and will be until Easter as most lots of this stock will need every day to bring them in on time. Sweet peas and lily of the valley have a good call and violets have been in better demand with the bright weather. Asparagus plumosus is still scarce but adiantum is being received in larger quantities which, at present, are about equal to the demand. Calendula and forget-me-nots, snapdragon and all flowers in the novelty class are good stock and eagerly sought for. Smilax will be a short item in this market in a few weeks as all the growers are nearly cut out and as the call will be greater from now on the available supply will hardly be enough. Ohio and eastern dagger and fancy ferns are now selling for $2 per 1,000, some southern fancy of good grade selling for $1.75, with the supply limited and prospects for a higher price before long. Southern smilax has had a good call the past two weeks which has cleaned up the available supply for the time being.

NOTES.

Chas. Bastian has taken the place of Miss Nettie Heideman as secretary of The Cleveland Florists' Exchange, the change being made on account of Miss Heideman's poor health lately and, as the increasing business of this firm required more help, the change was made in the slow season. From now on the service here will be the best obtainable.

Those returning from the Buffalo rose show report a very fine display and a most enjoyable time. This delegation stopped over on its return from the show at Mentor and visited the establishment of C. Merkel & Son. This concern makes a specialty of Easter plants of all kinds; the stock was never in finer shape nor as large and, with good weather from now on, they should have a grand Easter trade.

Frank Smith of Smith & Fetters has gone on his eastern trip in quest of novelties for Easter.

Visitors: L. L. Lamborn, Alliance; M. A. Weaver, Massillon; S. J. Green of H. Bayersdorfer & Co., Philadelphia, Pa.; M. Shattls of Lion & Co., New York.

April.

How like our lives is April's day,
Alternate smiles and tears.
Sad and joyful, dark and bright,
Hope merged in trembling fears.

When fortune smiles and friends are near,
The way seems paved with flowers.
And April scarcely sheds a tear
From dawn to twilight hours.

But when our purposes are crossed
We hardly lift our eyes,
When April's day, with gentle rain,
Bids sleeping spring arise.

While hid behind the lowering clouds
The sunshine goes astray
Till bursting forth from sombre skies
It glorifies the way

And turns to pearls the tears that dim
Our lives—and April's day.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Freesias.

As the freesias go over, any bulbs that are to be saved must be allowed to finish their growth in the greenhouse or a frame and then the flats or pots containing them should be placed in the full sun, drying them off by degrees until the soil is dust dry and then giving them a thorough baking in the sun. Freesias, more, perhaps, than almost any other bulbous subject we grow, should have this thorough ripening treatment, but only after the growth has been finished. Bulbs dried out suddenly shrivel and lose weight and consequently start weakly and flower poorly. When thoroughly dried shake them out, select the best for flowering and place them in a cool dry store until needed for potting in August.

Tuberoses.

Given attention to a few minor details, tuberoses are about the easiest flowering bulbs to grow or force that we know. There is nothing difficult from first to last, and if good stock is obtained from a reliable house, practically every bulb will flower. They are especially useful in filling up odd spaces on the benches; if wanted early they answer readily to heat while, if necessary, the bulbs may be held over and started whenever the demand for them is likely to be good. For the earliest supplies pot culture is best and, to save room, each bulb may be placed in a pot just large enough to take it easily and placed over a brisk bottom heat. A few may start without good foliage and produce poor spikes, but the percentage will be very small and it is worth risking where very early flowers are needed. Let them have strong heat and abundant atmospheric moisture right along and when well started repot into 4-inch. The moisture is necessary to keep thrips in check, as this is the worst insect enemy to the tuberose. When the flowers are needed later pot the bulbs or place them in flats and give them time to get established and make a little root before giving any heat. These will make better foliage and probably finer spikes. For later use keep the bulbs in a cool, dry place and pot or flat them as needed. Practically no shade is needed during the time the plants are growing and the spikes forming, but a moderately heavy shade should be applied as soon as the lower flowers begin to open, and the atmosphere must be kept drier to prevent the flowers turning yellow. If good soil is used very little feeding is needed, but if it is at all poor then feed liberally with any good fertilizer from the time the pots or flats are filled with roots until the flowers begin to open.

Dahlias.

Much of the dissatisfaction with spring-propagated dahlias may be traced directly to the treatment of the plants after they are rooted. Instead of being properly hardened off they are rushed along in heat to produce more cuttings and then allowed to run up tall and spindly. In consequence, when they are planted out later, they have to begin over again to make stiff flowering shoots. No matter how well grown, spring propagated stock cannot be as good as plants from pot roots or divisions, but with ordinary care they will do well. As soon as the cuttings are well rooted they should be potted into 3-inch or 4-inch pots. Growers for shipping trade in pots cannot do this, as they have to save room and weight for shipping, but the grower who needs plants for his own use can do so. They take no more room in the benches, for the 2-inch pots have to be stood apart as soon as the plants begin to develop, so take as much room as the larger ones. It is the plant that takes the room, not the pot. After potting, place the plants in a slightly shaded house at a temperature of about 60° for a few days, until they recover from the disturbance, then gradually increase the new light and air and reduce the temperature, until the plants are hard and vigorous enough to go to a cool frame, only protected at night against frost, or on benches in a cool, fully ventilated greenhouse. Keep them hard and they will grow quite fast enough and when planted outdoors in June they will take at once to the soil and grow away rapidly. Pot roots that have been held over winter, and old clumps lifted in fall, should be brought to the light as soon as room can be spared and started gently in a cool house or frame. Division of the roots is more easily carried out before the plants

start than after, as the shoots are not so liable to be snapped out. The cactus varieties especially flower more freely from this class of roots than from stock propagated in spring.

Spring Treatment of Cattleyas.

It may seem paradoxical, but it is none the less a fact that underwatering of cattleyas in autumn leads to overwatering and consequent damping of the young growths in spring. When the growing season is drawing to a close and ripening or, more correctly, developing, the pseudobulbs is in order, then the grower too often thinks that he must reduce the water supply. This is wrong; the plants are in need of plenty of sustenance at this time to develop the bulbs and, in the case of some species, the forming flowers that rest in embryo during the winter. Withhold the water and both bulbs and flowers will be weak. The connection between this and the spring growths may not at once be apparent, but there is a great difference in the shoots from really well developed bulbs and those that are only partially developed. There is also a difference in the bulbs themselves, for the latter will shrivel after the shoots have started and the grower naturally thinks to mend matters by watering more freely in spring, thus making the compost wet and unfit for the new roots to enter, which he would not do if the old bulbs kept plump. This, then, explains the seeming paradox. Any one who has plants in the condition indicated will make matters worse by heavy watering now. Keep up plenty of atmospheric moisture, but allow the compost to remain comparatively dry. Then the roots will soon take a hold of the latter and water in plenty can be given, as the roots will take care of it. Up to the time that the sheaths open and form a cup with the growing leaf light dewing overhead on bright days is necessary, but when this cup-like formation exists the water must be used with great caution, or much injury is likely to accrue from damping. A suitable night temperature now for all cattleyas of the labiata group is from 55° to 60°, always with a little air on. C. citrina may be kept cooler, while C. superba likes more heat, probably, than any other species.

Care of Young Stock.

No matter what the class of stock grown, its care in the earlier stages is of the utmost importance. Plants of carnations, roses, or anything else that are neglected in a young state may recover in the benches, but time is lost in the process and the ultimate results are never as good as where they are carefully looked after from the first. Every leaf on a young rose plant is a producer of roots and should be carefully preserved. Plants staged too close together or watered in block instead of being carefully examined as the work proceeds and watered when necessary lose their foliage when moved and the air gets between them, consequently when planted the first leaves are small and more or less useless as root producers. Carnations similarly treated run up spindly and are equally unsatisfactory, while rust and kindred diseases always run riot among plants so weakened. Annual and biennial plants, such as asters, stocks, wallflowers, antirrhinums and the like are simply useless when neglected either in the seed bed or later. They run up to small wiry stems, flower on the top and that is the end of them. This emphasizes the point we have often brought forward, viz.: Never propagate more stock than can be profitably treated from the cutting or seedling stage onwards. Better grow half the quantity and bring it to perfection than start a large batch and wind up with a lot of useless, unprofitable stock.

THE RETAIL TRADE

EASTERN retailers report a considerable increase in advance orders for Palm Sunday. Very large consignments of palm leaves have been arriving at New York from Savannah.

THE first of the season's Easter lilies arrived in New York March 22 on the steamships Prince George and Trinidad. Most of the lilies are in the bud state. There was a good natured rivalry between the two boats as to which would get into port first, and the Prince George won by the narrow margin of 15 minutes though she started some 4½ hours later than the Trinidad.

An All-Pink Easter Basket.

SEE SUPPLEMENT WITH THIS ISSUE.

The popularity of the beautiful Lady Gay rambler rose at the coming holiday of Easter is likely to be even greater than it was last year. It is a most attractive variety, lending itself to artistic methods of arrangement, and some of the most beautiful baskets seen last Easter, as shown in our supplementary illustration, contained one or more plants of it. There is something about the bright pink color of this rose that does not clash with that of other flowers and it gives an effect of lightness and grace that is wanting in many other varieties. The basket shown is an all pink creation, simple, yet very effective, the azalea being of this color and also the ribbon used to decorate it.

This making up of tasty and attractive baskets is a profitable branch of the retailer's business and must on no account be overlooked. Nor must it be shelved until the last minute but the baskets, the plants and all other necessary material must be on hand. It always a winning card to make up one or two good baskets and place in the window a few days before Easter. This may be done in many cases without turning the plants out of their pots or injuring them in any way, so that, even if the baskets are not sold, which is unlikely, the stock is still saleable. A certain amount of crowding is inevitable in making up plant baskets. To get a really good display is impossible without, in some measure, hiding a certain part of the plants. But as will be seen in the basket illustrated it is possible to show the habit of the individual plants clearly and effectively and yet have a well filled up, showy and artistic basket.

EASTER BASKET BY WM. J. SMYTHE, CHICAGO.

Hydrangea, Crimson Rambler Rose, Pandanus and Foliage Begonias.

At Easter the number of plants available is large; there are, besides the Easter lilies and roses, hydrangeas, begonias of the foliage kinds, bulbous stock in greater

variety than at any other time, primulas, ferns and many others so there need be no lack of variety. Choosing suitable baskets for the plants and carefully avoiding anything in the ribbon used that will contrast badly with the flowers are also important points to study.

Easter Baskets and Other Devices.

As Easter comes near, the retailer will be busy thinking out new and effective schemes for the delectation of his patrons and, incidentally, transferring a little of their spare cash to his own bank account. The prominent note now in the best design work is simplicity, and our illustrations herewith show how this can be combined with grace and lightness which, coupled with a well thought out color scheme, is of the greatest assistance in the worthy object above mentioned. Wm. J. Smythe, of Thirty-first street and Michigan avenue, Chicago, has long been noted for the exquisite work he carries out and our illustrations of his work show his hand has not lost its cunning. The basket in which Crimson Rambler rose is associated with the hydrangea was a telling one and Mr. Smythe used an excellent form of foliage begonia that was very attractive. In the other basket the white chiffon ribbon gave a very light and tasty effect to the plants, in this case Crimson Rambler and Easter lilies being chiefly used. The Spanish irises, though not in any way particularly arranged, the bunch having been taken from his ice-box and photographed, show what a graceful and beautiful flower this is. It should be much more used.

In bulbous stock, azaleas and Easter plants generally, A. McAdams of 316 Fifty-third street, Chicago, is always well in the lead and his arrangements of these always sell well in his locality. They are characterized by tasteful arrangement and color combination, while his bulb baskets, pans and boxes are simple and effective. The red tulips, Voorbaack, shown herewith are from plants picked out at random from his Easter stock and of this he annually grows a large quantity. The double daffodil is well done here as may be seen by the pretty little box illustrated which is a good seller around the holiday. There is every prospect, with the returning tide of prosperity to business generally, that the Easter trade this year will be of a character not usually seen and record sales are expected in all lines. Be in line for this and don't hesitate to stock up well for it is one of the most annoying things possible to have to turn away good money owing to want of stock.

Flowers in the New York Stores.

With the near approach of Easter, the thoughts of the trade, quite naturally, are considerably devoted to lilies. While there are plenty of cut blooms to supply all demands and small quantities of pot stock has appeared, the lily crop, in the region that supplies this market, is a very poor one. At present, all the evidence goes to show that at Easter, the roses, Lady Gay, Dorothy Perkins, Crimson Rambler and other fine pot stock will take precedence over the lilies. To a certain extent this was the case last year when lilies were of better quality than now. American Beauty roses, which arrived in limited quantities during February, are now in abundant supply. The leading retail stores, which are always considered the best customers for special American Beauty, are not buying heavily, and as a consequence, prices are down and the speculators now have their innings. In this journal there recently appeared a communication from the president of the Retail Association of this city. We readily concede that the tone and temper of that article was admirable. In all fairness, however, the following question should be answered. If the regular dealers in a perishable commodity cannot or will not take all that is offered, what is to become of the surplus? We are not in sympathy with speculators or unlicensed vendors, but we do have in mind the grower, who, in too many instances, to our knowledge, has been made the "goat" in the petty quarrels between other branches of the trade. Under the conditions of a surplus in Lent, fine special American Beauties have, within the past two weeks, stood a good chance of getting into the hands of anybody that thought they could turn an honest penny by handling them.

Nearly the same conditions as recited above, have prevailed with reference to the tea roses, with the saving clause that the shorter grades of the latter are more suitable for funeral work; but, taken altogether, they are in much greater supply than the "Beauties"; they too fall into the hands of the street vendors. Splendid blooms of Richmond, Killarney, Chatenay and Bridesmaid may now be seen in the stores. The stem development of Richmond and Chatenay is at this time particularly noteworthy and they are at present showing their best points. While the supply of orchids is not heavy, there is more than enough to supply all demands. A leading dealer in orchids said recently that he believed this season would have been worse than last, with a panic prevailing, had it not been for the fact that nearly every stock was scarcer than last season. No fault can be found with the quality of carnations now being offered. Alma Ward, Mrs. Ward, Enchantress and its sports, Beacon, Victory, Lady Bountiful and other varieties may daily be seen in fine development of bloom and stem. Though Genevieve Lord is by some now classed among the old and obsolete varieties, splendid blooms of it may be seen in this market. Weber's Toreador, variegated, has recently been attracting considerable attention.

Though southern narcissus is on the market, we do not notice that it is being to any extent handled by the leading stores. The most noteworthy variety of yellow narcissus now seen is Emperor, which brings the best prices, as seems reasonable, as in our opinion it surpasses all other varieties. N. poeticus is frequently seen and can be very advantageously used in making up mixed bouquets. There is a variety of good tulips on the market, but Murillo seems to be the most popular and the best seller. Excellent blooms of amaryllis are now frequently seen and a large bunch makes a very attractive feature in a show window. The same may be said of the snapdragons (antirrhinum) which are in fine quality. Of sweet peas there is almost a surplus and they vary in quality almost

BASKET BY A. McADAMS, CHICAGO.

Easter Lilies, Azaleas, Hyacinths and Ferns.

as much as in color. Beautiful clusters of long stemmed pink and white varieties are easily found, but all the shades are well represented. Many growers seem to be taking Zvolanek's advice to "grow sweet peas when another crop fails."

The violet question has been the cause of so much agitation in the trade that we refer to it with reluctance. While the violet has, so to speak, been traveling a rocky road, it will always be in demand and cannot be ignored in a review of the stock in trade of the retailer. At present, as for some time past, excellent blooms of single violets are seen about the stores and with many customers they are popular. Both pink and white stocks have recently been very noticeable. As usual there are many singles, but a double white, much resembling Rawson's Cut and Come Again, of years ago, is seen in considerable quantity and is a really beautiful and useful flower. Forget-me-nots may be had in quantity. Being of the humble order of the flora, from the present day viewpoint, it is not a great seller, but pleasing to the eyes of the old fashioned folks. There are more than enough gardenias on the market to supply all demands, but many of them, in comparison to what have been grown in the past, are of inferior quality. It almost appears that there is danger of this industry being overdone. A better quality of blooms and less of them would better supply the demand. There is an excellent quality of lilac in both colors, both cut and in pots, to be seen. While our latter day forcing has brought into the market much that is attractive and useful, we think that few stocks, on these points, can surpass the lilac. In its even larger sphere, practically the same may be said of lily of the valley, of which there is now a constant supply of fine quality. There are a number of other flowers now seen which, while considered of minor importance, are dear to the hearts of many patrons of the retail stores. Big bunches of pansies may be had for small outlay and, if they do not yield large profits, they keep green the memories of "ye olden time."

Crepe Chasing.

ED. AMERICAN FLORIST:—

Do you think it is proper for a retailer to solicit orders for funeral work at a house where there is a death in the family?

Michigan. FLORIST.

Decidedly not. Anyone with a spark of good feeling himself would respect those of bereaved friends and relatives and, at such a time, would not intrude upon their sorrow. The practice is of such a despicable nature that no one worthy the name of a florist or a business man would be guilty of it. Stress of business competition, slackness of trade, or other excuses sometimes given for such vampire-like methods do not help the matter any and the worst feature of it all is that it is no use appealing to the better feelings of such mercenary ghouls—they have none. Boycotting by all who have ordinary human tendencies and feelings would appear to be the only thing to meet their case. We are sorry indeed to hear of such instances as you mention.

ROCKVILLE, CONN.—Calvery & Risley, who have greenhouses at Hartford, opened a retail store in the Citizens' block April 1. They have had the place entirely refitted.

FLORISTS' PALMS.

PHOENIX Roebelenii is always good property.

LOOK out for the dry pots in the center of the benches.

NOTHING but the best loam should be used in the compost for palms.

WATCH for "stars" in the glass which often ruin fine specimen palms by burning the foliage.

NITRATE OF SODA is perhaps the finest stimulant for starved palms, but its use must be followed by that of some other good manure as it stimulates rather than feeds.

Notes in Season.

The latter part of April and beginning of May should see the repotting of the palms in full swing, as the season is none too long to get the required growth by autumn, and he who grows for the trade really needs to have much of his stock of this class of plants in saleable condition by September 15, for that date marks the time of delivery for much of the wholesale dealings in palms. Stock that needs cleaning should have been attended to first, this operation being best done in the early spring before the time for repotting, for there are few establishments, or possibly none, in which no insect-infested corners are to be found. The worst places in a greenhouse for the propagation of insects are usually to be found in the back corners of a bench at the warm end of the house, and in such corners scale, mealy bug, red spider and thrips are likely to establish their colonies. There is an advantage in setting over the stock on a bench from time to time for, by this means, the plants are turned about and sized up, and change places enough to give a better chance to assist in the cleaning process by vigorous syringing.

Syringing will not clean a plant that is covered with scale, but will do much toward keeping a clean plant in that condition. The method often adopted of plunging young palms in ashes on the bench has the advantage of holding these somewhat top-heavy subjects up while the hose is played upon them vigorously, for every experienced man knows that it is difficult to syringe thoroughly among stock of this character without knocking the plants over. In repotting it is not always the best practice to repot an entire lot of young stock at the same time, there always being some weak plants in a lot, and as these latter are more likely to retain their weak character by over-potting, it makes the whole batch irregular. To have even stock one should do some selecting, arranging the plants in such a way as to give proper space and keeping the culls by themselves, and if the culls are very poor give them a space on the dump rather than in the houses. Elaborate arrangements for drainage in potting small palms are a waste of time, and a single crock properly placed with the concave side down will answer the purpose quite as well as those careful arrangements of large and small crocks to which our fathers were so partial. Of course some drainage material is necessary, but the single crock will answer for any size pot from 3-inch to 6-inch, provided that the crock so used is large enough to cover the hole in the pot.

EASTER BASKET BY WM. J. SMYTHE, CHICAGO.

Crimson Rambler Rose, Begonias, Easter Lilies and Asparagus.

Clean pots are decidedly the best to use for palms, for the pots get foul quick enough amid the heat and moisture that prevails in a palm range during the summer months. Pot firmly, but in doing so, be sure to work the new soil all around the old ball, so that no unfilled spaces may be found when the plant is next turned out of its pot. And to pot properly, a thin rammer or potting stick, is required for all pots larger than four inches in diameter. Some growers favor small shifts in poting palms, namely, from one size pot to the next, but if the stock is in proper condition there is no risk in shifting from a 4-inch pot to a 6-inch size, or from a 6-inch to an 8-inch pot, at this season, though there is a possibility of overdoing the matter late in the autumn, and I would then advise more caution. The proper compost for palm growing has frequently been described in the AMERICAN FLORIST, and it may suffice at this time to state that the best foundation for such compost is well-rotted sod from an old pasture, this having been stacked up the preceding summer with about one-fifth of good manure, or, in other words, one load of manure to four of sod. If the soil is naturally heavy, it will be improved by adding some sand, and, when about to use the soil, a good sprinkling of bone dust will be beneficial in most cases.

In my experience, bone dust did not seem specially helpful to arecas, but was distinctly beneficial to latanias and kentias, the improvement being most marked in the case of the latanias. It has already been remarked that any plants requiring cleaning should have this operation performed before they are repotted, and the special reason for this is found in the fact that when a newly potted plant is cleaned, even by careful hands, it is very likely to become loosened around the base, and no plant grows as well when in that condition. That shading is needful for the palms has naturally been recognized some weeks previous to this date, and it is especially necessary with the newly potted stock in order that these plants shall recover color, and go ahead rapidly. As the warmer days come on much more ventilation will be required, but the supply of moisture in the atmosphere must be kept up by syringing the plants, and spraying the walks and under the benches.

It is usually safest to continue a little fire heat in the palm houses until June 1 to June 15, and especially is this needed for the benefit of the recently potted stock, the few tons of coal thus used being an expense that will be much more than returned in the gain of growth. Some of the palm seeds are being received from abroad at this time, the spring crop of kentias being now due, and these should be planted just as soon as possible, for it is many months since they were gathered, and the majority of palm seeds are not good keepers, particularly if allowed to get very dry. When planted, these seeds must be kept moist and warm to help germination, but the soil should not become sodden or the germs may rot. Almost any light soil will answer for the germination of kentia seeds, provided that the proper conditions of heat and moisture are given, but the percentage is uncertain.

W. H. TAPLIN.

CHRYSANTHEMUMS

VIRGINIA POEHLMANN is one of the very scarce varieties this season.

The Planting Season.

It is only 30 days to May, the time for planting early commercial sorts. To secure early buds it is necessary to plant early. Each year orders for early varieties continue into July and while such kinds are often in stock and are supplied, the results must be far from satisfactory. If the late buyers would put a few figures together the importance of early benching would be apparent. Most early varieties require 8 to 10 weeks to furnish the blooms after the buds are selected. Golden Glow is the only exception among the large flowering section, which has perfected blooms in six weeks after disbudding. In planting stock from small pots we should allow at least eight weeks more to secure vigor and sufficient length of stem. From this it will be seen not less than four months are required for best results, which means that from the last week of May to June 15, is the time when this work should receive attention.

Those who desire the early blooms have no time to lose in deciding upon their requirements. If the stock is to be propagated the cuttings should be put in at once, or, if they are to be purchased, the order should be placed without delay so as to have everything in readiness. Some of the varieties are increased so rapidly that ample stock can be secured without doubt, while such kinds as Alice Byron, Virginia Poehlmann, etc., which remain in a semi-dormant condition until the sun stimulates them, are usually not to be had in prime condition until April or May. Of such there is never a surplus; they are generally short of the demand. The foregoing is also applicable to those interested in exhibition varieties. The date for planting, especially when the first bud (usually termed crown bud) is to be secured, is identical. The great difference is in the time required after the buds are selected as the exhibition sorts as a rule do not develop as fast as the earlies.

BLUE SPANISH IRISES.

In some cases the buds that appear on August 10 do not come to maturity until November 5, while others reach full development by October 20. These pecularities are not under control to any great extent. The date of flowering seems to be established in each case, but is often influenced by climatic conditions. Some seasons the earlies do not get out of the way for the midseason sorts. The only explanation we can give for this unnatural state of affairs is that the intense heat of summer occasionally is prolonged into autumn, and this retards the development of the early varieties. When the change comes and the conditions are more congenial the latter sorts progress as rapidly as the early.

ELMER D. SMITH.

Notes in Season.

It is time to get the exhibition stock in shape as nearly all of the best varieties for exhibition require a long season of growth, consequently, not any time should be lost in starting the plants. Cuttings now ready to be taken from the sand should be potted without delay. Most of the varieties will require every

day's growth from now till fall to get into the best exhibition state. February propagated stock, now well rooted in 2½-inch pots, should be shifted into larger sizes. With this repotting make the soil a little richer than that used in potting from the sand. It is well to bear in mind that the most important point connected with the growing of exhibition chrysanthemums is to build up a stout, vigorous, constitution. Give the plants plenty of air and maintain a night temperature of 45°-50°. During the daytime, ventilate well on every favorable occasion, guarding particularly against sudden advances in the temperature which quickly cause a soft growth.

TULIP RED VOORBACK AS AN EASTER PLANT.

The specimen bush and standard plants for exhibition should now be well under way. The one most important item connected with their culture just at this time is that of keeping them in active growth. Give them every encouragement by potting into larger pots as soon as they require it, also, with the bush specimens, give close attention to keeping the growths pinched back and, as soon as the standards have attained the required length of stem, commence to pinch back the growths to form the heads, It is absolutely necessary that these exhibition plants receive all the light and air possible, and when well rooted in the pots they will take considerable water and must not be allowed to wilt for the want of it. Cuttings of the commercial varieties, prominent also for exhibition, should now be put in the sand. Many of these produce the best blooms if taken from the sand about April 15-20 and potted into 2½-inch pots. This gives them plenty of time to make sturdy, vigorous stock for planting in June.

C. W. JOHNSON.

Solid Beds Versus Benches.

ED. AMERICAN FLORIST:

Please tell me the best method of growing chrysanthemums on solid benches. Some years ago I grew fine blooms and now I want to change again from raised to solid beds, but some growers don't recommend it. Can you tell me the difference? GROWER.

It is difficult to give instructions to others on a subject that one has had but little or no experience with. "Grower" infers he was once successful in growing on solid beds, and this being the case we fear he will gain little information from what we have to offer. The important points leading up to the production of fine blooms, are ample drainage, rich soil not to exceed five inches in depth and of a moderately heavy texture. As previously stated, our experience with this system has been very limited and, failing to succeed some years ago, we discontinued it entirely. Wherever we have seen chrysanthemums growing on solid beds, we have noticed the general average not as good, lacking in uniformity of size and finish. If we were growing under such conditions, we would try and provide the conditions mentioned above.

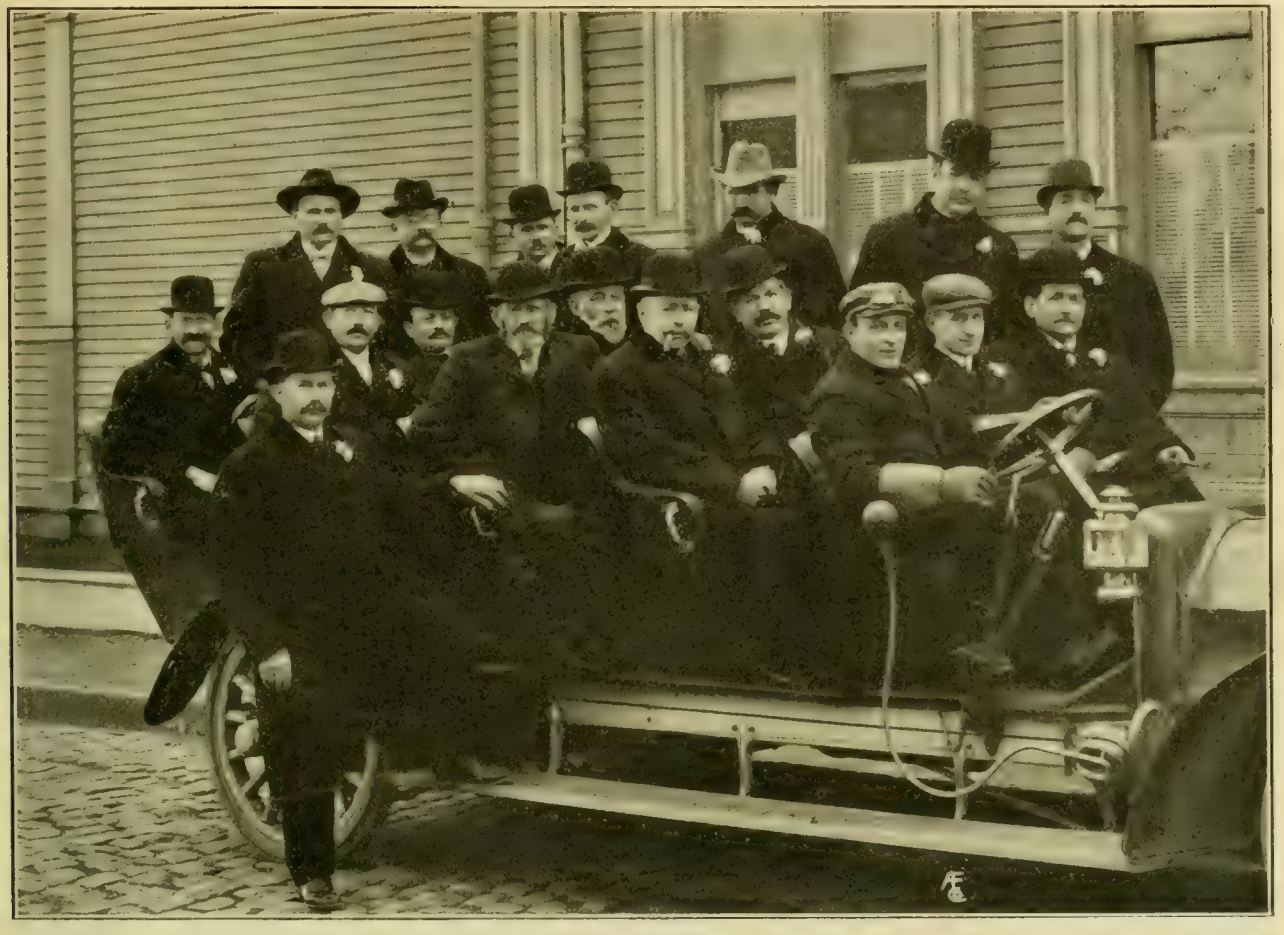
Raised benches dry out faster than solid beds hence great care in watering, both during the growing season and flowering period, should be exercised. The foliage is the best index to the amount required. As long as it is bright green there is no fear that an over supply has been administered, but it should be curtailed at the first indication of the leaves turning yellow. From this we do not refer to the lower leaves but the top of the plant, which will assume a yellow or sickly appearance from either lack of drainage or over supply. A prudent person will get into touch with the plants under his care, being careful not to overwater solid beds, particularly in dark lowery weather, or allow raised benches to suffer for the want of it, especially in hot days. We do not infer that good blooms can not be produced where this system is employed, but feel confident the conditions are better under control and as a whole are more satisfactory with raised benches. ELMER D. SMITH.

Hardy Ferns.

The greatly increased interest that is being taken in hardy native and other ferns, an increase so important that some of our principal nurserymen are going into their culture to a quite unprecedented extent, lends special interest to a paper on this subject, recently reprinted, that was read by J. F. Huss at a meeting of the New Haven, Conn., Horticultural Society last year. Mr. Huss is an old fern man and of late years he has gone somewhat largely into the culture of hardy species having been led into it partly by a desire to clothe a hill with a northwest aspect on which "nothing would grow." The result was so satisfactory that the plantings were considerably increased, not only native species being used, but hardy kinds from all over the world wherever Mr. Huss had friends or correspondents that would send him spores. He speaks very highly of some of the Connecticut ferns which he describes as very abundant and beautiful.

Coming to their culture Mr. Huss wisely advises the would-be fern grower to study the requirements of the ferns rather than the appearance of the rock work and, in all cases, to provide against the disastrous effect of high winds which are injurious to all of them. Overhanging trees and windbreaks are recommended and a good depth of soil. Further protection for the smaller varieties is necessary and, to provide this, the planting of the more robust

DAFFODILS AND FERNS IN BIRCH BARK BOX.



NEW YORK AND NEW JERSEY ASSOCIATION OF PLANT GROWERS ON ITS SECOND ANNUAL OUTING, MARCH 15.

kinds of polystichum and others is recommended. A considerable list of the tender choice kinds is given with notes on suitable positions and soils for the best results. Deciduous and evergreen kinds should be planted together so as to prevent a bare appearance at any time and early fall planting is advisable, though any time from October until March is suitable provided the soil is not frozen. When moving plants in a wild state of active growth, the fronds should all be cut off before planting to allow the roots to grow and form a new crown for the ensuing year. Moisture in summer is also noted as a very important point.

Propagation does not differ much from that followed for indoor ferns, viz.; by division, by spores and by the contact method with those kinds that are proliferous or produce small plants on the older fronds. Mr. Huss advises the use of pots filled to within two inches of the top with cinders covering this with rough sphagnum moss and for soil, using a mixture of loam, peat, leaf mould and sand or finely broken brick. The soil should be sterilized before use and well moistened. The pots should be stood in saucers of water and covered with panes of glass which must be turned over or sponged off every morning to remove superfluous moisture. In from three to six weeks the surface will be covered with a moss-like substance which is replanted or pricked off in other pots by means of a watchmaker's pinchers shifting the plants on as they become crowded. The first season the plants are grown in frames as it is desirable to have strong stock for planting. Mr. Huss winds up his notes by saying that "The whole culture is so fascinating for the lover of ferns that there is no obstacle in his way that he cannot overcome, no matter how difficult the task may be."

New York and N. J. Ass'n. of Plant Growers

SECOND ANNUAL OUTING.

The members of the New York and New Jersey Association of Plant Growers visited the establishments of fellow members on Long Island to inspect the Easter crops March 15. There were 18 members took part, and they traveled over the entire Long Island section in W. H. Siebrecht's large automobile.

One of the objects for which the association was incorporated is to foster the trade and to diffuse information as to pot plant growing. With this object in view the happy party called at almost every member's place on Long Island, and examined the plants in stock for the Easter trade. It was a very instructive day for the members, and the information which was gathered made it well worth the time which was lost during their absence from their own establishments. The association has followed this practice for two years and has found it so profitable that it intends to continue the same indefinitely.

The party started at the place of Herman Dreyer at Elmhurst, and from there proceeded to College Point and visited Anton Schultheis; after seeing all the houses in his establishment the members passed to Whitestone and visited Louis Dupuy, Pankok & Schumacker and the Hinode Floral Co. From there a long run was made to Jamaica, where they visited A. L. Miller's greenhouses and from there proceeded to Brooklyn, where, at Piel Bros., a bounteous course dinner, with liquid refreshments, was awaiting them. After dinner they proceeded to the establishment of John Scott, Flatbush, thence to Peter Wagner, Charles Zeller & Sons on Clarkson street, and also on Lefferts street, Brooklyn, thence to the houses of Louis Schmutz and Frank Manker. It took considerable time to go through each establishment, and when the rounds had been made it was after six o'clock and the party had enjoyed sufficient fresh air in the automobile to gather up a good appetite for the supper which was served to them in the Consumers' park.

The following members were in the party: Julius Roehrs, Sr., Herman Dreyer, Louis Dupuy, Frederick H. Dressel, Frank Manker, Herman Manner, A. L. Miller, John Miesem, Pankok & Schumacker, Herman C. Steinhoff, Herman Schoelzel, Anton Schultheis, John Scott, Louis Schmutz, Peter Wagner, Alfred L. Zeller, and Wm. H. Siebrecht, Jr., the secretary and attorney for the association. H. H. Lorenz had charge of the automobile. The photograph from which the accompanying illustration was made was taken just after the noon meal, when everybody felt happy and looked cheerful.

ATLANTA, GA.—B. H. Bostain, who formerly had charge of the floral department of the Nunally Co.'s store here, has been made general manager of the Whitehall street store and is receiving the congratulations of his friends on his promotion.

HARDY HERBACEOUS PERENNIALS.

The Iris and Its Culture.

The species I. Germanica is undoubtedly more common than any other type, particularly in the older gardens. In this purple is the predominating color. Purple King and Black Prince being best representatives. Iris Florentina, the orris root of commerce, is one of the most popular, and very deservedly so. For over 100 years it has occupied a conspicuous position in every large New England garden, and during this period has lost none of its popularity. Free blooming, with flowers of pearly whiteness, it annually leads the way to the charms of the early summer garden flowers. There are three forms—the common type just described, the variety Albicans, of a purer white, and Princess of Wales, even more floriferous, with slightly longer flowers and the most deliciously fragrant of any German iris.

The crowning beauty of all German irises is traceable to the blood of I. pallida, the broadest leaved of all, with sword-like foliage, often attaining a height of two and a half feet, and an inch and a half across the blade, according to J. Woodward Manning, in a paper read by him before the Massachusetts Horticultural Society. The flowers are borne on long stems, well above the foliage, altogether producing a most charming effect. The variety Dalmatica, sometimes known as Princess Beatrice, and occasionally in this country as Madam Almyra, is the finest, with immense flowers of a rich lavender blue, and with a charming though subtle fragrance. Delicata is of weaker growth, with lavender falls, shading to white and French grey standards. Hybridizing has not improved this species, as seen in the variety Queen of May, which, while beautiful, with its soft, rosy lilac, almost pink flowers, is a comparatively weak grower, though floriferous. The beautiful cross of the species with I. sambucina shown in the variety Madam Chereau is an exception, however, and this is a most delightful flower, with its pure white petals richly feathered with lilac. The varieties of German iris mentioned are but a fraction of those that can be purchased from horticultural sources; they represent, however, the best, and among them are varieties far advanced in horticultural merit over many of the more common varieties seen. Of clear yellow German irises we have two species, I. flavescens and I. aurea; both are good, the former attaining a height of three feet, with lemon yellow flowers, and the latter of dwarfer growth, with rich golden yellow flowers.

All of the irises with surface rhizomes are of the easiest cultivation, thriving in ordinary garden soils, requiring subdivision and replanting in rich soil as the clumps become large or the soil becomes exhausted. This replanting should be done as soon as the foliage shows signs of ripening, and must not be delayed so long that they may not become thoroughly re-established in the soil before winter. In planting it is better not to sink the rhizomes over an inch below the surface, unless the situation is naturally a very dry one. As the plants become established the rhizome soon assumes its proper elevation. Until of late few diseases troubled this class. Unfortunately, however, a seemingly microbic rot is found to affect the roots, so that the foliage becomes detached from the rhizome. The disease is little understood and no remedy has been proved effective, though it is quite possible that over richness of soil may serve to foster the disease.

Jacob's sword (Iris pseudacorus) occupies an intermediate position. Never being classed as a German iris it is a beautiful plant to associate along water courses, and yet will thrive admirably in ordinary garden soils. It has ample dark green foliage, makes a vigorous and healthy clump and bears abundantly rich golden yellow flowers with a conspicuous orange zone on the base of the falls. Two types are common, one with narrower petals than the other. The gladwin, or roast-beef plant (Iris fœtidissima), while pale blue in its typical form, in its variety Citrina is of a clear yellow, but the main interest in this centers in the ornamental effect of the bursting seed pods, within which fleshy, bright, orange-colored seed show to advantage. Those irises with so-called tufted roots are represented familiarly by the Siberian and Japanese classes. The Siberian has a number of distinct forms, of which the type forms a tall, leafy plant, four to five feet high, with many flowering stems, bearing from three to five flowers to a stem, and with dark blue coloring marked with white pencilings. The two most useful forms are the pure white variety, which grows about two feet high, bearing purest white flowers in small clusters, an admirable plant for any flower border, and the variety Orientalis, with broad, short foliage growing to a height of 18 inches and bearing with wonderful profusion flowers of the richest blue, with faint white throat markings. There is no better true blue in the iris family than this. It too is one of the few irises which will bloom a second time, though sparingly, it is true, by cutting down after the flowering period. This can hardly be recommended, however. No iris reproduces itself any faster than this. It quickly forms broad colonies that necessitates frequent division and transplanting.

Japanese irises are perhaps the choicest of the family; they are much misunderstood and require more judgment in their cultivation than do German irises. If planted in situations where water will not collect about the crowns in winter they are perfectly hardy. To flood them at the flowering period is an advantage, but not a necessity. This need is nearly as fully met by thorough mulching to retain all possible soil moisture during the flowering period, and with artificial watering is far safer than to plant in a moist situation. It is a false impression that the Japanese plant them where they are subject to excesses of moisture in winter. During this period the Japanese iris fields are drained. All Japanese irises are seemingly improved, and selected varieties, rather than hybrids. Their range of color is a very ample one, but has decided limitations. Aside from the variety of self colors and their combinations in flaking and veining, together with the single and semi-double forms, nothing can be expected. A dozen distinct sorts represent the class far better than a large collection of varieties whose distinction is more dependent on their labels than on any visual evidence of variety. Probably no class of plants has been more cruelly foisted on the public as new than these, by means of fanciful names in which Japanese terms have been used as indicative of new sorts.

It is highly improbable that any distinctive improvement of the class has resulted in comparison with the first sets of varieties shown in our halls 20 years ago. The following list is probably no better than others that could be named, but possesses distinction in the sorts quoted: Arthur Silbard, double, white, shaded with violet; Blue Jay, single, clear blue, spotted with white; Calypso, double, lilac, richly veined with purple; Dagmar Georgeson, rich royal purple, single; Goliath, double, white, marked with violet; Emperor of Japan, double, velvety maroon; Gold Bound, double, white, margined with gold; Painted

A BORDER OF JAPANESE IRISES.

IRIS KÆMPFERI AT DREER'S NURSERY, RIVERTON, N. J.

Lady, single, white, veined with claret. The wonderful size of the flowers of the Japanese iris, their late period of flowering carrying on the flower effect to early August, renders the class indispensible to every flower garden. Their massing in groups of a single variety, rather than in promiscuous clashing of colors, is essential for the most artistic effects.

THE VIOLET.

Notes in Season.

The season for single violets is now practically over, unless they are planted in cold frames. The doubles will continue to yield flowers of indifferent quality for another month. But we may consider the season at an end and the game all over. We can now reckon up profits for the year and decide how many new houses to build from the same. This is the time to divide the clumps of single varieties for next year's stock. Better put a good man at it. The work looks easy and it is; but it is also very easy to do it wrong. Select the plants carefully, throwing out any that show signs of disease or have a stunted appearance. Be sure not to use the old center crown. This is too hard and woody to ever make a satisfactory plant.

After division, the small plants should be carefully trimmed, removing nearly all the leaves and shortening the old roots with a sharp knife. Then a few weeks in a light cool bench, in soil, and they are ready for outside planting. There is only one right way to handle the single varieties during the summer months. Plant in the open ground early, in good soil, but without much animal manure. Give good clean culture, water only in case of excessive drought, and do not house until the plants have been subjected to one or two sharp frosts, to check growth and encourage the formation of flowering buds.

The growers in some of the western states have trouble in following this plan of outdoor culture, owing to excessive sun heat, but I believe that by planting in partial shade, careful attention to soil and mulching, the difficulty can be overcome, in a measure, at least, and that they will find outdoor summer culture preferable to planting early in shaded houses. If blessed with a black, greasy soil, try a liberal addition of coal ashes to it and note results. If the stock shows signs of losing its vitality it is well to procure fresh plants from a locality some distance away. Usually such a change of stock will result in increased vigor, for a few years at least. Buy of a reliable grower and pay a fair price. Low prices almost always mean cheap, poorly selected, poorly packed and generally undesirable plants.

The handling of the double varieties is entirely different. Varieties of the Marie Louise family, which includes Farquhar and Imperial, should be in the houses about as early as the beds can be made ready. But even with these we prefer that they be planted a few weeks in the open to harden, and fit them for a winters work. Lady Hume Campbell may usually be left outside until August. Cuttings of all double varieties should now be in the propagating bed if good plants are expected. The violet does not root readily after the days get warm. We find that the plants will root quicker and better in cocoanut fibre than in sand. If this material can be procured readily, try it. If late in getting in the cuttings it is especially desirable.

VIOLA.

Nitro-Bacterine.

In what was termed a "friendly scrap" between Prof. Bottomley and the R. H. S. expert, F. J. Chittenden, at a meeting of the English Horticultural Club it was fairly well brought out that inoculation with nitro-bacterine is no use on good, well cultivated soil and may even decrease the yield but it may be profitable on newly broken up soil which is deficient in bacteria. The whole affair, however, is as yet in the experimental state and nothing really decisive can as yet be stated.

UNIONTOWN, PA.—Thos. Patton died here March 23. Though he studied for a lawyer he never practiced, but instead turned his attention to landscape gardening. He was a disciple of Swedenborg and died at the age of 80 years.

ST. PAUL, MINN.—The Warrendale Floral Co. has been sold out at sheriff's sale. Local people advise that the concern is owing everybody and that creditors are not likely to realize one per cent on their claims.

THE ROSE.

PRESIDENT POEHLMANN of the American Rose Society says Mme. Abel Chatenay will surely return to popularity within a very few years.

Notes in Season.

It is a well known fact that there is general overhauling of greenhouse work after Easter, and here and there we often come across a block of plants that should have been repotted long before the holiday rush reached its zenith, or it may be a lot of cuttings starving for something more substantial to feed on than propagating sand. However, we are glad to admit that, of the rose growers of today, the wide awake variety is in the majority and well knows the close competition to which he is subjected by his neighbors in the same business and he also knows that the rose stock, whether it is one year on the benches or two days in the sand, won't stand for the slightest neglect, and it doesn't matter whether Easter comes early or late it should not in any case offer an excuse for the neglected appearance of any of the stock.

Perhaps we are past the days when overforcing was somewhat of a practice, still the temptation to have a few more flowers at Easter may have led the inexperienced growers to resort to this injurious practice and a word to those that may have done this may help to soften the blow suffered by the plants. The higher the temperature the houses has been run at the slower one must proceed to bring them back to normal, but by reducing the temperature a few degrees daily and by keeping a rush of air from striking the plants by the most careful ventilating and by reducing the amount of air for a few days, spraying over the tops instead of heavy syringing, it won't take long to bring the plants back to something near their normal condition. We often hear an inquiry about this time of the year something like this: My plants have a terrible dose of mildew and although I have used quantities of sulphur I can not check it and the flowers are off color with weak stems. This looks to us like too much kindness in the way of overforcing a crop and putting on lots of air, water, etc., afterward, and for just such a case I have been tempted to make these suggestions, but, if advice is worth taking at any time, I should strongly advise the rose grower to never force a rose beyond the limit for the sake of a few extra flowers or dollars that look dead easy, for it's a poor investment and amateurish in the full sense of the word.

But to come back to cultural notes proper, how are the Kaiserin, Carnot, and other summer forcing varieties looking? Do not let them get that soft look. They may take lots of water if they are making roots rapidly. At the same time they will require lots of air. Keep the soil around them cultivated once a week to encourage evaporation and no short stemmed growth should be allowed to bloom. Remove the buds from these and let only the stronger canes flower. Syringe them hard early in the day and examine the soil frequently to see that the plants do not get dry at the roots. The artificial heat should be cut off as early in the morning as possible and for real strong stock use the minimum amount of heat until the natural outside conditions will keep them going.

A few words about the compost for filling the houses: Where one has only a small range of glass, by far the most satisfactory method of preparing and time for attending to same is in the spring before the grass gets long. Select a good stiff clay soil that has a good set of grass on it and that has been known to have grown good crops of almost any thing except weeds. Have as much of this plowed as will be required and plow it while on the wet side so the sod will hang together. Clean off a piece of ground near the houses that are to be filled and have enough good cow manure in readiness on the spot to mix with the soil in the proportion of one load of good manure to three of soil. Employ enough extra help to rick up the soil in layers with the manure as fast as it is being hauled and have plenty of ground bone or bone meal on hand to mix with the soil. Start to rick up the soil by making a layer of sod, grass side down, then scatter a little ground bone over this about a shovelful to a layer 10 feet square. Scatter a little of the loose soil (if any is shaken out of the soil in handling) over this, then a layer of cow manure, another of soil, etc., all the way up until the rick is as high as desired. Slant the rick when approching the top so as to shed as much water as possible. Start another layer joining the first and so on until sufficient or a little more soil is prepared than will be required. Plenty of good soil is a good thing to have around. See that the ground slopes away from all sides of the compost heap in order to carry off the rainfall. After letting the soil stand for a week or two it should be chopped down and re-stacked and the oftener this mixing is gone through with, from now until the time it is carried into the houses, the better it will be for the young stock to be planted and grown on in it this season; all the care and judgment used in preparing the compost will show to good advantage later.

E.

New Rambler Rose Agnes Steinhoff.

On a recent visit to the range of Herman C. Steinhoff, West Hoboken, N. J., while being shown around by his foreman, A. F. Dwyer, we discovered a new rose. For this we claim no great credit as it appears that its merits have been recognized at this range for several years. It is quite appropriate that Mr. Steinhoff should have named this new production for his daughter, Miss Agnes, for has it not been said that beauty and good qualities go together? Herman Steinhoff, Jr., who has a taste for hybridizing originated this rose and for several

VASE OF JAPANESE IRISES (IRIS KÆMPFERI).

years it has been grown at the Norwood and West Hoboken ranges and carefully watched. Its development has been so satisfactory that a large stock will be ready for dissemination this year in early autumn.

Agnes Steinhoff is a single-flowered, pink rambler rose, the flowers being of a very beautiful shade and having the additional good quality of keeping bright and fresh looking on the plant for three weeks after opening. Another good point is that the flowers cluster on the top of the plant and do not scatter all over it. The foliage is of a fine deep green and not subject to mildew. We are free to say that in the hands of a less modest man than Herman Steinhoff we would have been hearing of this rose for the past two years, but it is never too late to recognize merit. It may be said in passing, that the Steinhoff range now shows a fine lot of Easter stock. There are pot roses in variety, azaleas and hydrangeas by the thousand, and about every other Easter offering, including fine lilies, that appeals to buyers.

Roses in California.

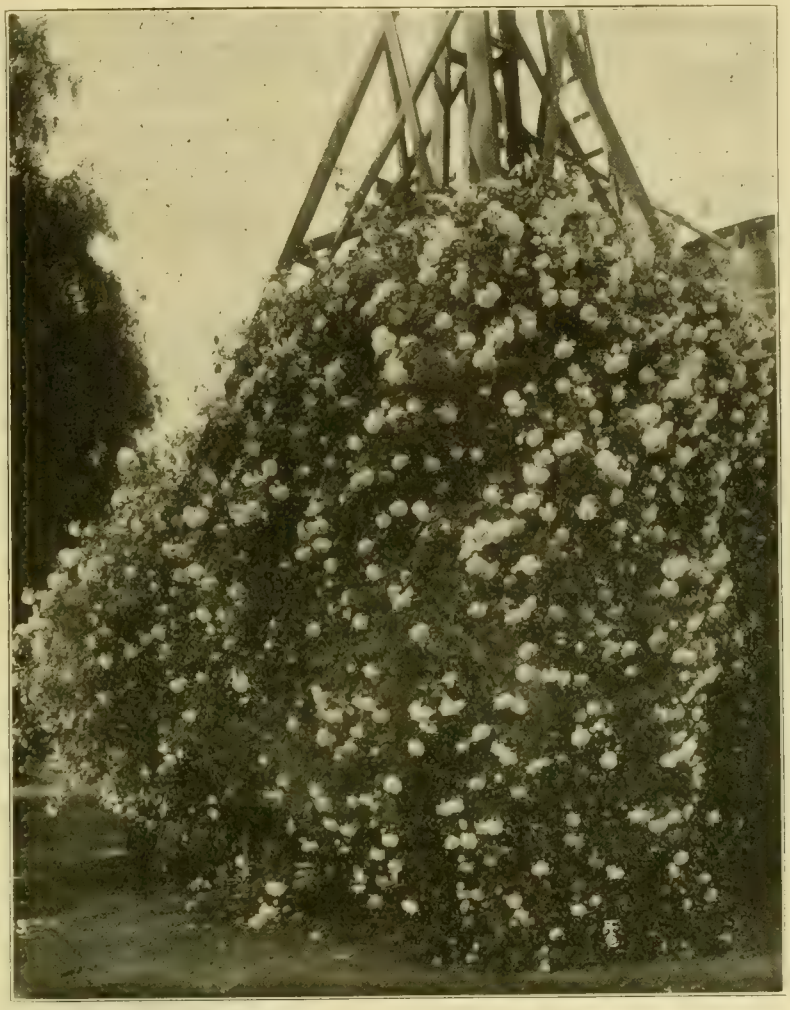
In California, where the rose runs rampant, it has become something of a fad within recent years, to cultivate what is known as rose "trees." More often than not, it is an unsightly shrub or tree which is chosen as a foundation, one which has perhaps served many years as an ornament, but which has now, through accident or decrepitude, outlived its beauty as well as its usefulness—for without beauty of outline and coloring, a tree of whatever description seldom succeeds in being useful. Everyone appreciates the length of time it requires for the majority of trees to reach a sturdy maturity, and no true lover of nature and her manifestations likes to cut down a full-grown tree. So the kindly aid of the hardy climbing rose is often happily called into service in order that the woodman may spare the tree.

In a certain attractive garden, there were two beautiful cherry trees which suddenly manifested a state of petrifaction. Whether it was the fault of the soil or the effect of a blight, no one was able to determine, but in spite of persistent spraying and diligent digging about the roots, both trees, with one accord, refused to put forth further foliage, though retaining their graceful bearing and symmetrical contour. Although the fruit of these trees was of an indifferent variety and therefore contributed little to their value, yet, situated as they were on the edge of a tennis-court and being the only shade trees in that part of the premises, their loss would have been a misfortune in the eyes of their owner. Directions, however, had already been given for their removal and new trees selected for their substitutes, while a discomforting lapse of many years was looked forward to, with no shade in that hitherto favorite spot. But the ever resourceful wit of woman came to the rescue in this case as in innumerable others from time immemorial, for the wife of the owner of the trees conceived the happy idea of utilizing their stark and naked limbs as forms upon which to festoon the long trailing branches of some climbing roses—thus covering a multitude of sins with a wealth of verdure.

In spite of the pessimistic protestations of her husband, whose unimaginative masculine mind failed to foresee good results from the undertaking, the little woman persisted in her purpose. Within a year's time there were yards upon yards of verdant draperies clinging to the once hopelessly bare branches of the cherry trees, and now, after two more years of sturdy growth upon the part of the climbers, the rose trees, clad in borrowed plumage, have become one of the sights of the neighborhood, showing forth a magnificent mass of leafage and blossoms. The white and pale yellow flowers of the Lady Banksia rose blend pleasingly on the one tree, and form a charming color contrast to its neighbor garlanded with Pink and Crimson Ramblers. It is not always deformed or decrepit shrubs, though, that are used as motifs for the rose trees. Evergreens, such as pine or fir, are especially well adapted to the purpose, the strength and steadiness of their foliage supporting the most delicate tendrils of the climber so that no effect is lost.

In an old-fashioned garden, not far removed from the writer's home, is one of the most beautiful samples of a rose tree that one could find anywhere. It is a large pine tree upon which has been trained a Beauty of Glazenwood rose. This rose tree has been for years a landmark in this locality and is gazed upon with pardonable pride by old residents of the vicinity, and with awe and admiration by touring sight-seers. The tree stands 35 feet in height and measures fully 120 feet in circumference. At all times of the year it is a thing of beauty, even during the winter months when the rose has cast its leaves, for then the tree stands entirely enmeshed in a lacey network of briary branches. But it is in the spring of the year that it is most wonderful. Completely enveloped in the tangle of festooning foliage and flowers, it is, in blossom time, truly spectacular in its appearance, with all semblance to its true type absorbed by the clinging climber—a veritable bouquet of monstrous proportions—the exquisitely changeable tints of the rose petals shimmering in the sunlight with iridescent glory.

Another successful rose tree experiment resulted in the utter transformation of an ugly evergreen arch,—one of those monstrosities of the gardener's art—by allowing a Cherokee rose to take complete possession. The arch stood at the side entrance of a deserted garden and had for decades been the harborer of dust and spiders—an eye-sore to all who passed that way. The property changing hands and a new and attractive home being built upon the lot, a general weeding out of all undesirable shrubbery soon followed. The arch seemed doomed as a matter of course, its stiffness and ugliness being entirely inconsistent with the good taste displayed by the builder of the new house. And so, in the opinion of the daily passers-by, it seemed the very irony of fate that many more attractive shrubs should have fallen be-



ROSES IN CALIFORNIA.

Roses Hiding an Unsightly Erection.

neath the axe, while this unattractive, gloomy, ever-dusty old arch was spared. But now, after an interval of several years, it transpires that there was method in this seeming madness, for where dust and cob-webs abounded, now gleams forth the waxen foliage of a single white Cherokee rose, which during the flowering months bursts into a miracle of starry camellia-like bloom. Crowned by this queen of the flowers, the once much despised archway has become in truth an arch of triumph. F. V. B.

Rose Society Premiums.

ED. AMERICAN FLORIST:—

One hardly envies the special committee on the regulation of premium offers, evidently hurriedly arranged for at the recent meeting of the American Rose Society at Buffalo, its task in framing a recommendation on the important question assigned to it. For though no one could find the least fault with the recommendation, as published in the AMERICAN FLORIST in the issue of March 20, yet, even the experienced members of this committee must have felt that their finding, to some extent, goes around the point at issue rather than settles it. When a lover of a certain class of roses takes sufficient interest to offer good premiums for exhibits of his or her favorites and there is no competition worth the name it is small satisfaction to know that the money is used for other purposes, worthy though these may be, and few will think to make it a clause that the money be returned or held for future shows.

Yet there seems no good reason why it should not be held for the same purpose another season. The Breitmeyer-Boddington prize was more or less a surprise to growers last season, but when these gentlemen allowed their offer to stand good for another season and growers had a whole year to prepare for it, well it certainly must have been a keen disappointment to them to find again no competitors, to name only one instance. The society and its officers are evidently anxious to break away from stereotyped exhibitions, to introduce variety and to forward the cause of rose growing along broader lines than heretofore. Here then is where the missionary work is needed and here is an opening for our growers of outdoor roses, of pot roses, and of other classes to come forward in the same spirit as our cut flower growers have done for years and to show us of their best. Unless they are shown, foreign visitors to our shores are apt to think, as one appears to have done on this occasion, that American growers of roses, other than growers of cut flowers under glass, are away behind. Come on then growers of Massachusetts, Connecticut and the Pacific coast and show these people what you have and what you grow. The season for outdoor roses is being materially lengthened by the introduction of hybrid tea, hybrid polyantha and other varieties, and if growers would show these to the public and explain to those interested how easily they may be grown considerable impetus would be given to rose growing generally, and Secretary Hammond's motto would come nearer fulfillment. Not only at national shows but even more at local exhibitions should nurserymen and rose growers come forward. It would increase their own business and help along the good work generally.

RAMBLER.

THE CARNATION.

Notes in Season.

The rapidly changing conditions from winter to spring makes this a very particular period in the life of the carnation plants that have been through a winter's season of flowering. The rapid growth of the plants, together with the quick drying out of the soil, make it necessary that the watering of the beds receive close attention. The airing of the houses is another important detail. The length of time the plants will continue to produce profitable results depends to a great extent upon the treatment that is given them during the coming three or four weeks. Disbudding must be followed up closely, any let up in this respect quickly ruining the crop. The plants will be greatly benefited by a dressing of pulverized sheep manure. Now this must not be given liberally enough to produce a forced growth, but to act as a slight stimulant. Propagating is being finished on most places now as from this time on it is a much more

Roses in California.
Cherokee Rose in a Pine Tree.

difficult problem to turn out a successful batch of cuttings. Fair results can be obtained by carefully watching the needs of the cuttings. They must be given a place where the draughts from the ventilators cannot reach them, also where they can be shaded properly and given a little bottom heat every day. The sand should be kept in about the same state as is usually the case throughout the propagating season, but as soon as the cuttings are rooted they should be potted up at once, not left.

The care of the young stock is important. Any plants that need it should be topped and this part of the work should be done with care. We allow our plants to stretch out long enough to make a clean cut just above the leaf axil. If any of the earliest propagated stock has the appearance of becoming hard in the pots, they should be shifted into a little larger size or planted out on a bench. Give the young stock plenty of fresh air on every favorable occasion. It does not need any pampering but delights in a cool fresh atmosphere. Young stock planted out in soil on benches or in boxes should have the surface soil loosened up every little while to keep it open. The plants are producing large quantities of blooms and the cutting and bunching entails considerable work. It should be kept followed up right along, the flowers not keeping very well if they are allowed to remain on the plants after they are ready to cut.

C. W. JOHNSON.

Carnation Culture.

A paper read by L. J. Reuter, Westerly, R. I., before the Morris County Gardeners' and Florists' Society, March 10.

Carnation culture has been discussed times without number, and my observations have led me to conclude that each grower must work out for himself the proper treatment which is required to correspond with the local conditions as they exist. Therefore, it is not my intention to go into any lengthy talk. It is possible to lay down certain fundamental principles for the beginner, but these serve only as starters and guides. The resultant success must depend upon his own powers to observe, and his ability to distinguish good effects from bad.

DIFFERING CONDITIONS.

Carnations may be seen growing under widely differing conditions, such as Enchantress, for instance, with a night temperature of 52° and a day temperature of 62° to 65°. Then, on the other hand, we have seen some excellent Enchantress growing with a night temperature of 48° and a day temperature of 70°. The latter seems to me to be a case of unusual treatment, but where is the room for criticism when the results are satisfactory? Again we come to the fact that one grower holds his carnations on what we would call decidedly the dry side, and possibly the next day we visit another where the beds are decidedly the reverse, and still both have equally good crops. We are constantly finding things to puzzle us in the way of culture, and for that reason it would seem that explicit directions for culture are worth nothing more than a hint and a guide.

THE BENCH QUESTION.

The subject of concrete benches is at this time receiving considerable attention. From an economical point of view these benches have an advantage over those made of wood, but the question that arises is this: Are raised benches superior to solid beds with good drainage? Here we come again to the same conclusion. Be guided by your own experience. If no better stock can be grown on the raised benches, then it is much cheaper to use solid beds. My own experience has led me to favor the solid beds. At the present time considerable experimenting is being done in the way of building concrete benches. Some are moulded entire, with bottoms, sides, stringers and supports practically in one piece. Others use movable slabs for the bottoms, and these are usually made at odd times during the winter, before the summer rush of work comes. One point which strikes me as important, is that the slabs be made as thin as possible

and still be able to carry the load. It is important that the concrete be as porous as possible. The slab about eight inches wide seems to be better than one 12 inches or more. By using the narrow pieces the drainage is made better, and they should be laid at least an inch apart. What I have stated about these benches has not been taken from personal experience, but from what I have seen at other establishments which I have visited, where raised benches are used. I believe that the concrete benches will prove to be good and any ingenious man should be able to work out a cheap and satisfactory way of constructing them.

KEEPING THE FLOWERS.

There is one question which has caused many of us some trouble this year, and I would say a few words about that now. My talks with numerous florists since last fall, not only growers, but storekeepers and commission men, have brought out the complaint that several of our best varieties are not keeping well. It is true that this season has given us bad weather to contend with, still we have some varieties which practically never give cause for complaint. Growing conditions, no doubt, cause this trouble to a great extent, but we are nevertheless sure that the trouble cannot be entirely avoided, even with great care to the ventilation, watering and feeding. What we must do, however, is to watch the new varieties carefully and steer clear of the poor keepers. Such varieties get the wholesale grower into trouble with the retailer, and the retailer with his customer, and the ultimate result is to hurt the sale of the carnation.

NEW VARIETIES.

The numerous reports in the trade papers have covered very thoroughly the many new varieties which are being shown this year, but a few words further may not be out of place at this time.

Bay State has shown up well wherever exhibited. It shows good keeping qualities, and is a large, bold and attractive flower with excellent stem. There seems to be no other variegated in sight to compete with it.

Apple Blossom is a very well formed flower with a general color effect resembling Prosperity, but not as deep in color as the latter and quite often coming all white. The stem is very good and it is surely a good traveler as well as an attractive novelty.

Pink Delight has been well thought of by nearly everyone who has seen it, and especially by those who have seen the plants growing at La Fayette. The blooms are not very large, but enough so for commercial purposes, and the form and stem is very good. It is a true salmon pink, and should take well with the public; as a producer it seems to give excellent results.

While at La Fayette we saw a large number of seedlings of all colors and types, but two scarlets and a crimson stand the strongest in my memory. They will undoubtedly be heard from later. I believe that one of the scarlets, Hoosier Lad, is to be introduced next year. It is a fancy bloom, good color and growth, robust and strong in every way.

W. N. Rudd showed a very promising crimson which is still under number. The form of bloom, stem and color are good, and it is claimed to be a fine producer and clean grower.

Ruby has been shown well at a number of exhibitions. It is a fancy bloom with excellent form and stem. The color is not too dark, and, as a keeper, outpoints the average crimson heretofore grown. The growth is ideal, free, upright and clean.

A vase of crimson shown in Boston by F. R. Pierson Co. was very attractive. This variety should be heard from later as it holds up well with the best in sight as to color, form and stem.

ROSES IN CALIFORNIA.

Beauty of Glazenwood on a Dead Tree.

If I were asked, what variety of those being introduced this year, pleased me most of all that I have seen, it would be hard for me to decide, but I must say a few words in particular for May Day. In this variety we find a shade which had been lacking among our commercial sorts. The color is a clear, lively satin pink, but that is not saying enough. We cannot find any standard variety to compare with it. When Enchantress of good color is placed beside it, May Day gets all the attention. It is in the Enchantress shade but a great improvement. The stem is strong and graceful, of good length and, judging from the plants seen growing at Richmond, we would call it a good producer.

The Chas. Knopf Floral Co. of Richmond, also have a seedling named Admiration to be introduced next year which should take well with the growers. The points of excellency in this variety, in a few words are large, handsomely formed blooms, strong stems and ideal calyx. The color is the most attractive point however; it being an even, soft pink, deeper than Enchantress, with no salmon and it does not fade out on the edges.

Sangamo and Superba are both excellent varieties having very long stems with sufficient strength to hold the flowers erect. They are both good keepers.

Dorothy Gordon resembles Rose Pink Enchantress very much, but is a decided improvement on that variety.

In whites, we have several showing up well. Shasta has attracted considerable attention by its nearly perfect form and pure glistening white.

Mrs. J. C. Vaughan, impresses me as a white from which we may look for something good. The flower is well built, loose and attractive, and it is of good size with an excellent stem. I have not seen it growing, but from reports of those who have, would say that it is free and clean. The cuttings at any rate, are starting out in good shape, showing a vigorous habit.

Although the blooms of Georgia are not very large, they are of good commercial size, and if it will produce freely, it should prove valuable. It is a good keeper and a pure white.

I neglected to mention, among the scarlets, O. P. Bassett, which was shown in excellent form in Indianapolis. In the scarlet classes it showed up well, and we hope to find in this a profitable variety. Some growers have been disappointed in Beacon this year and with Victory steadly losing friends, there is room for a good commercial scarlet.

For some years back the market has been bare of good yellows, but there are three now in sight. It remains to be seen what will become of them. We should get at least one of these. J. Whitcomb Riley is a very striking bloom, bold and rugged with Lawson characteristics. A point of value in this sort, is the absence of pink or red markings. The bloom is a clear color of the ideal shade of yellow, not too dark nor too light.

Kanarie Bird as staged in Boston showed up fine and Nathan D. Pierce of Norwood, R. I., has a yellow of fine stem, the bloom somewhat resembling the old Eldorado. Although the sale of yellows is not heavy there is always a chance to use a limited number to advantage, and a good one will be welcomed.

A visit to the new range of the E. G. Hill Co. is especially interesting this year. Novelties in roses and carnations are to be seen here, and there are several carnations on trial which should be heard from. I cannot mention any one in particular, as it would be necessary for one to watch several of them in growth and habit in order to decide which was best for commercial purposes. I remember, however, that a white and a scarlet looked especially good.

THE EXHIBITIONS.

Massachusetts Horticultural Society.

The annual spring flower show and Japanese garden of the Massachusetts Horticultural Society, which opened in Horticultural Hall March 24 was one of the most attractive and unique exhibitions of the kind ever seen in Boston. The hall was brilliant with flowers of all hues, but the principal feature was the Japanese garden constructed by J. Farquhar, who visited Japan several years ago and brought back many rare plants from the kingdom of the Mikado. The garden was laid out on an elevation, with gravelled walks, miniature lakes, pavilions and the like. In the background was the famous snow-covered Tugihana mountain rising against a field of blue sky. This spot was certainly romantic enough to be attractive, apart from the fine display of rambler roses shown here by M. H. Walsh of Woods Hole.

THE AWARDS.

Azalea Indica, eight plants, in at least four varieties.—Edward MacMulkin, first; E. W. Breed, second. Three plants, distinct varieties (for private growers only).—Wm. Whitman, first and second. Palms, pair, in pots.—Edward MacMulkin, first; Mrs. Frederick Ayer, second; William Whitman, third. Ericas, six plants, in not less than three species.—Mrs. Frederick Ayer, first and second. Rambler roses, three plants, distinct varieties (for private growers only).—Miss S. B. Fay, first. Group of roses (open to commercial growers only).—M. H. Walsh, first and second. Display of forced hardy herbaceous and alpine plants.—Bellevue Greenhouses, first. Twelve cyclamens.—Dr. C. G. Weld, first; J. S. Bailey, second; Dr. C. G. Weld, third. Six cyclamens.—E. J. Mitten, first; Mrs. Frederick Ayer, second and third. Cinerarias, grandiflora type, six varieties.—W. A. Riggs, first; Dr. C. G. Weld, second; J. S. Bailey, third. Schizanthus, six plants, in pots.—Mrs. J. L. Gardner, first; J. S. Bailey, second. Cinerarias, stellata type.—Wm. Whitman, first and second; Mrs. J. L. Gardner, third. Hyacinths, six pans.—W. A. Riggs, first; Wm. Whitman, second. Single pan.—Mrs. J. L. Gardner, first, second and third. Early Tulips, six 8-inch pans.—Wm. Whitman, first; W. A. Riggs, second; Mrs. J. M. Sears, third. Late tulips, six 10-inch pans.—W. A. Riggs, first; Mrs. J. L. Gardner, second. Narcissi, collection of large trumpet varieties, not less than 10 8-inch pots.—Wm. Whitman, first; W. A. Riggs, second; Mrs. J. L. Gardner, third. Collection of short trumpet varieties.—Wm. Whitman, first; Mrs. J. L. Gardner, second. Amaryllis, 12 pots.—Mrs. J. M. Sears, first and second. Group of Easter flowering plants.—Thomas Roland, first; Edward MacMulkin, second. Display of bulbous plants.—Wm. Whitman first. Forced bulbs, six pans, grown without the aid of a frame or greenhouses.—Miss Margaret A. Rand, first; Henry L. Rand, second; Miss Margaret A. Rand, third. Orchids, group of plants arranged for effect, to cover not less than 50 square feet.—E. B. Dane, first; Seth A. Borden, second; E. J. Mitten, third. Specimen plant.—Mrs. A. W. Blake, first; Seth A. Borden, second.

ROSES.

Twenty-five blooms of American Beauty.—Waban Rose Conservatories, first; F. R. Pierson & Co., second. 25 Bride.—Montrose Greenhouses, first. 25 Bridesmaid.—Montrose Greenhouses first. 25 Richmond.—Montrose Greenhouses, first; W. H. Elliott, second. 25 Killarney.—W. H. Elliott, first. 25 blooms of any new named variety not in commerce.—F. R. Pierson & Co., first.

CARNATIONS.

Vase of 100 cut blooms of one variety, with foliage.—M. A. Patten, first. 25 blooms of any named crimson variety.—M. A. Patten, first; Wilfrid Wheeler, second; Edward Winkler, third. 25 blooms of any named dark pink variety.—C. S. Strout, first. 25 blooms of any named Winsor-shade variety.—C. S. Strout, first; M. A. Patten, second; Backer & Co., third. 25 blooms any named Enchantress-shade pink variety.—R. D. Kimball, first; M. A. Patten, second and third. 25 blooms of any named scarlet variety.—John Barr, first; M. A. Patten, second; B. P. Winch, third. 25 blooms any named white variety.—M. A. Patten, first; C S. Strout, second. 25 blooms of any named white variegated variety.—M. A. Patten, first; R. D. Kimball, second. 25 blooms of any named yellow variegated variety.—M. A. Patten, first. Violets, bunch of 100 blooms of any single variety.—Estey Bros., first; Wm. Sim, second; H. M. Howard, third. Bunch of 100 blooms of any double variety.—L. S. Small, first; H. M. Sanderson, second; Norris F. Comley, third. Sweet peas, two vases, distinct varieties, 100 blooms in each.—Wm. Sim, first; Norris F. Comley, second; Wm. Sim, third. Antirrhinums, vase of 25 spikes.—R. D. Kimball, first. For the best mantel decoration of plants and flowers—Edward MacMulkin, first; Mrs. E. M. Gill, second; Sidney Hoffman, third.

Gold Medal.—R. & J. Farquhar & Co., for Japanese garden. Silver medals.—Mrs. A. W. Blake (J. L. Smith, gardener), for Nephrolepis Piersoni; Mrs. J. M. Sears, amaryllis; Arthur Griffin, Gloriosa Rothschildiana; Harvard Botanic Garden, artistic display. First Class Certificates of Merit.—W. W. Rawson & Co., for Narcissus King Alfred; W. A. Riggs, Rose Tausendschon; Larz Anderson, Lælia elegans; E. O. Orpet, Brassocattleya Susannæ (Cattleya Thayeriana X Brassavola Digbyana); Julius Roehrs Co., Odontoglossum crispum var. E. B. Dane; Julius Roehrs Co., Cattleya Schroederae var. Surprise; E. B. Dane, Cypripedium Mandai; M. H. Walsh, rambler rose, Maid Marion. Cultural Certificates.—Thomas Roland, for Cytisus racemosus; Wm. McGillivray, Dracaena Godseffiana. Honorable Mention.—Robert Ballantine, dwarf blue cinerarias; New Hampshire Agricultural College, seedling carnations. Vote of thanks.—E. O. Orpet, collection of cut orchids.

St. Louis Horticultural Society.

THIRD ANNUAL SPRING SHOW.

The third spring exhibition given by the St. Louis Horticultural Society opened on Wednesday, March 24. The weather, being very stormy, hurt the attendance, but in the evening a good crowd arrived considering conditions. The display of cut flowers was not as large as last year but the display of flowering and decorative plants surpassed that of last year. The park exhibit, in charge of Wm. Murname of Forest park, was a splendid display of foliage and decorative plants and great credit is due this gentleman for the beautiful arangement, which showed his great knowledge of how to place and group plants to the best advantage. The displays were well worthy of mention, especially the beautiful exhibits of F. C. Weber, Theodore Miller, Young & Sons and Wm. Schray & Son. Vaughan's Seed Store, Chicago, exhibited fine box trees, Aucuba Japonica and cycas, making a very fine display.

Schray's display of daisies was much admired, also his lily of the valley and Wistaria Sinensis. F. H. Weber's basket of jonquils, display of violets and lily of the valley were the center of attraction. Geo. Windler had a fine display of mignonette. J. F. Ammann showed Alice Roosevelt and Mrs. Potter Palmer roses which were much admired. The displays of carnations by W. J. & M. S. Vesey, Chicago Carnation Co. and John Steidle, were very fine. New carnation, Sangamo, shown by A. C. Brown, of Springfield, Ill. and Chicago Carnation Co.'s new royal purple, Gov. Deneen, also shown by A. C. Brown, were much admired. The center table furnished by F. H. Weber with center piece of lilac, boutonnieres and sprays of sweet peas was good. Geo. A. Kuhl exhibited ferns and spireas. The Koenig Floral Co. had several large handsome displays. Judges were Robert Jesson, Andrew Meyer and A. T. Hey of Vaughan's Greenhouses, Western Springs, Ill. The awards follow:

Collection of bulbous plants in bloom.—Wm. Schray & Sons, first; Koenig Floral Co., second.

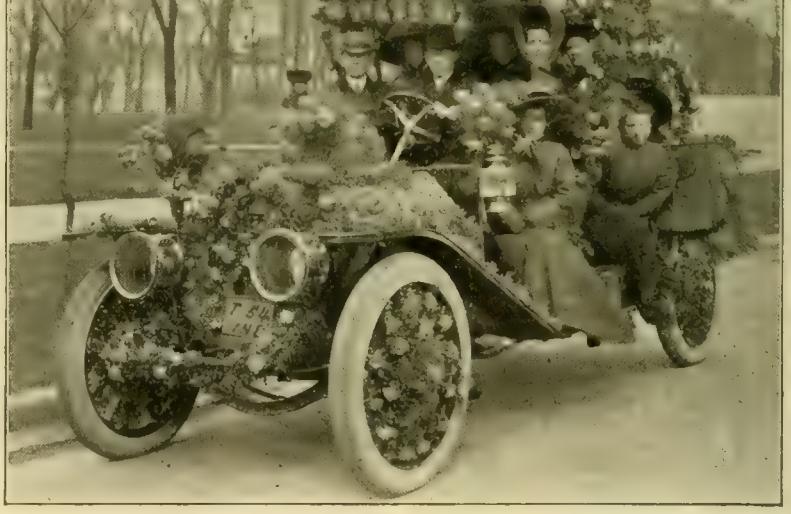
Fifty foliage and flowering plants.—Wm. Schray & Sons, first; C. Young & Sons, second.

Ten geraniums in bloom.—Koenig Floral Co., first; C. Young & Sons, second.

Twelve mignonette.—Geo. B. Windler, first.

Exhibit by amateur.—Mrs. Ottmar Moll, first.

Specimen plant in bloom.—Wm. Schray & Sons, first; C. Young & Sons, second.



A. WIEGAND & SONS' (INDIANAPOLIS) DECORATED AUTOMOBILE.

About 1,500 Carnations and 125 Asparagus and Smilax Were Used.

Display of lily of the valley.—Wm. Schray & Sons, first.
Display of pansies.—Wm. Schray & Sons, first; John Steidle, second.
Five vases of carnation blooms.—John Steidle, first; Chicago Carnation Co., second.
Vase of 50 white carnations.—Chicago Carnation Co., first; W. J. & M. S. Vesey, second.
Vase of 50 light pink.—W. J. & M. S. Vesey, first; Chicago Carnation Co., second.
Vase of 50 dark pink.—Chicago Carnation Co., first; W. J. & M. S. Vesey, second.
Vase of 50 red carnations.—Chicago Carnation Co., first.
Vase of 50 any other color.—W. J. & M. S. Vesey, first.
Vase of 25 pink roses.—John Steidle, first; J. F. Ammann, second.
Vase of 25 white roses.—W. J. & M. S. Vesey, first; J. F. Ammann, second.
Vase of 25 red roses.—W. J. & M. S. Vesey, first.
Display of lily of the valley.—F. H. Weber, first.
Display of violets.—F. H. Weber, first.
Basket of spring flowers.—F. H. Weber, first; Koenig Floral Co., second.
Table decoration of spring flowers.—F. H. Weber, first.
Display of hardy shrubs in bloom.—Wm. Schray & Sons, first; Koenig Floral Co., second.

W. F.

Twenty Years Ago.

APRIL, 1889.

Mosquito netting was recommended for placing over the holes in the bottoms of flower pots to keep out worms.

A specimen of Vanda Sanderiana eight feet high and with 18 growths was reported as "coming."

Bantam fowls were allowed the run of John Thorpe's houses at Pearl River, N. Y. "They do no harm but a great deal of good in picking up grubs and other vermin," Mr. Thorpe said

The Evans ventilating apparatus was very popular in the east.

American exhibitions were being highly praised in the English horticultural papers.

Robt. Halliday, father of R. J. Halliday, Baltimore, died at his home, and his funeral, on April 17, was largely attended by people from far and near to pay their last tributes to this much respected florist

Dailledouze Bros., Flatbush, N. Y., were growing many fine varieties of lantana and were advising their culture by other florists

Much discussion was going on as to the nomenclature of the fuchsias. White House, E. G. Hill and others.

The dubious methods of certain advertisers of "wonderful" plants called forth much caustic comment both here and on the other side of the Atlantic.

Wm. Falconer was advising florists to turn their attention to the amaryllis.

Dishes such as are now used for ferns were filled with cacti and obtained some popularity.

Tradescantia discolor		.12

At present the growers seem to be practically sold out. Lilies are very short and unsatisfactory.

OBITUARY.

J. S. Pearce.

J. S. Pearce, London, Ont., died at his home on the evening of March 25. Deceased had been ill for about a week but, the day before he died he went out for a walk and, becoming faint, had to be assisted home. Mr. Pearce was born in Tyrconnel, Elgin county, 67 years ago. Thirty-six years ago he came to London and entered into the commission business. From this he branched out to become head of one of the largest and most extensive seed businesses in Canada, shipping seeds from coast to coast. About eight years ago he sold out the seed business to Darch & Hunter and retired. Shortly after this he was engaged by the city as parks superintendent, which position he held until his death, carrying out many important improvements there.

During all his life Mr. Pearce displayed a love for flowers and trees, his happiest moments being spent when working in their midst. He was the oldest son of John Pearce, one of the pioneer settlers in Dunwich township, living in what was known as the Talbot settlement. His charity was widely known. It was said of him that no one ever applied for charity and was refused. His kindly words and cheerful smile will be long remembered by his many friends. He leaves a widow and two brothers.

Edward Gill.

Edward Gill, aged 69, one of the foremost horticulturists of the Pacific coast died March 25 at his home in West Berkeley, Calif. Mr. Gill was a native of New Jersey and was a well known figure at eastern shows. He was a specialist in rose growing and an expert cultivator of all classes of stock and had considerable repute as a skilled botanist.

Indianapolis.

PROSPECTS GOOD.

Last week's business gave no reason for complaint; it was good in all branches. Easter prospects are fine and growers are already booking orders for cut flowers. Most rose growers are in doubt as to a full Easter crop. It will take the most favorable kind of weather to make it.

NOTES.

A burglar visited Edward Bertermann's house last week. Mrs. Bertermann gave the alarm and the burglar retired with sufficient speed to close the front door between himself and the pursuing householder. The latter, very lightly clad, reached the front gate just in time to see Mr. burglar turn the next corner. The night prowling gentleman only received $3 for his trouble, but he might have fared better had not Mrs. Bertermann interfered.

Bertermann Bros. are planning a large and well equipped cold storage building for bulbs and hardy stock. They also have placed an order for several carloads of pecky cypress, taking advantage of the prevailing low prices.

H. W. Rieman is going to discontinue rose growing; space is limited with him and he needs his rose houses for his ever-growing plant trade. Mrs. Ernest Rieman and children are planning a trip to Europe this summer.

John Evans of the Challenge ventilator reports business very active; one day recently he booked orders for 75 machines and several hundred pipe brackets.

A. Wiegand & Sons new Overland automobile was handsomely decorated and much admired in the recent automobile show. The Wiegands find their motorcycle very convenient for delivery. J.

POEHLMANN'S LILIES.—The lilies shown on our cover design, reproduced from a photograph, were grown by the Poehlmann Bros. Co., Chicago.

THE paper on carnation culture by L. J. Reuter, Westerly, R. I., which appears elsewhere in this issue, contains a candid opinion by this noted cultivator on many of the more recent novelties and varieties, besides much up-to-date cultural matter.

LUTHER BURBANK has, it is said, abandoned the project to have his plant business incorporated.

AN English trade paper says the market for kentia seeds is very unsettled and a rise in prices expected.

THE demand for cycas leaves and fern balls has fallen off about 50 per cent during the past two years.

H. B. MAY & Co., Lower Edmonton, London, Eng., have acquired the old established business of J. Birkenhead & Co., Sale, Manchester.

WHATEVER may be argued against sterilized soil its great advantage in preventing damping when used for seed-growing is unquestionable.

LILIUM HARRISII is reported to have succeeded well in the south, the plants evidently enjoying good steady growth without too severe forcing.

CANNAS are in active demand and some sorts pretty short. The very dry autumn weather not only reduced the size of the clumps, but has possibly injured the keeping qualities.

ONE of our subscribers suggests that dealers in shipping stock should eliminate all noxious insects, such as white fly, mealy bug and scale. Growers who expect to ship twice to the same buyer would do well to remember this suggestion.

THIS seems to be an era of horticultural legislation, some little of which is good and much of it annoying and detrimental to the best aims and interests of horticulture in its broad sense of ameliorating and improving our everyday homes and their surroundings.

THE Consular and Trade Reports frequently warn merchants using the foreign mails for their catalogues against insufficient postage on their mail. After calling attention recently to some rather glaring instances the consul at Puerto Plato adds: "This may seem to be a small matter, but when an American firm is trying to interest local merchants in a new line, and the local man must pay six cents postage before he reads the proposition in which he may or may not be interested, he is certainly more or less prejudiced against the matter in advance."

Duty on Crepe Paper.

The protest of A. Herrmann, against the assessment of duty at the rate of five cents per pound for crepe paper such as is used for wrapping flower pots, and claiming a duty of 25 per cent ad valorem, was overruled by the board of appraisers at New York, February 26, and the duty remains as heretofore.

Personal.

Otto Will, of Minneapolis, Minn., who is making a trip around the world with his bride, writes from Kioto, Japan, stating that they would sail shortly for China and India. The happy couple should have a splendid time in these celestial regions.

J. D. Eisele, manager of Dreer's mammoth greenhouse establishment at Riverton, N. J., wears out a pair of the best shoes he can get in Philadelphia every four weeks in his daily rounds.

The best friends of Prof. L. R. Taft of the Michigan Agricultural College, Lansing, Mich., would scarcely recognize him without his moustache.

John Evans again denies responsibility for Richmond's recent wet vote.

American Carnation Society.

CARNATION REGISTERED.

By Dana R. Herron, Olean, N. Y.—Olean, parentage, Winsor and unknown seedling of Winsor growth; color, pink; size of flower 3½ inches; habit, long stiff stems, with perfect calyx, flowers very full and fragrant.

ALBERT M. HERR, Sec'y.

National Council of Horticulture.

The second installment of the press service of the National Council of Horticulture contains articles on "Sweet Peas and Other Good Annuals," "How to Select Shrubs," and "What to Plant in April." The articles are timely and practical and are entirely free to nurserymen, seedsmen, local editors and others applying for them to James H. Burdett, 1720 West One Hundred and Fourth place, Chicago.

The New Tariff Bill, H. R. 1438.

The new tariff bill as now before congress provides in the two sections which affect florists and nurserymen, landscape gardeners and others using plants and flowers that are imported, and stands as follows:

Section 259.—Orchids, palms, dracænas, crotons and azaleas, tulips, hyacinths, narcissi, jonquils, lilies, lily of the valley and all other bulbs, bulbous roots, or corms, which are cultivated for their flowers or foliage, and natural flowers of all kinds, preserved or fresh, suitable for decorative purposes, 25 per cent ad valorem.

Section 260.—Stocks, cuttings or seedlings of Myrobolan plum, Mahaleb or Mazzard cherry, three years old or less, $1 per 1,000 plants; stocks, cuttings or seedlings of pear, apple, quince and the Saint Julien plum, three years old or less, and evergreen seedlings, $1 per 1,000 plants and 15 per cent ad valorem; rose plants, budded, grafted or grown on their own roots, 2½ cents each; stocks, cuttings and seedlings of all fruit and ornamental trees, deciduous and evergreen, shrubs and vines, manetti, multiflora, and brier roses, and all trees, shrubs, plants and vines, commonly known as nursery or greenhouse stock, not specially provided for in sections one or two of this act, 25 per cent ad valorem. BENJAMIN HAMMOND.

Sec'y S. A. F. Tariff Committee.

Important Foreign Exhibitions.

April 2-13.—Internationale Gartenbauausstellung, Zoological Garden, Berlin, Germany.—Siegfried Braun, secretary, Berlin N. 4, Invalidenstrasse 42.

May 19-21.—National Horticultural Society of France, annual exhibition le Jardin des Tulleries, Paris, France. Abel Chatenay, secretary, 1 Rue St. Aubin, Vitry-sur-Seine, France

May 25-27.—Temple show, Royal Hortucultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. E. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

September 8-9.—Royal Caledonian Horticultural Society, Centenary show, Waverly Market, Edinburgh, Scot. John McKenzie, secretary, 23 Rutland Square, Edinburgh, Scot.

LILIES WILL BE SHORT.

Entertaining seems to have become less frequent and less formal during the closing days of Lent. The uppermost thought of the local retailer at present is to secure the necessary Easter stock and novelties, in consequence, many of them have been, or are going to visit the larger cities in order to obtain their needs. It seems to be the general opinion that this Easter will be a busy one, and there is no doubt there will be a great demand for good stock, both in the cut flower and plant lines. The local growers are all showing a good supply of Easter stock; also a goodly number of lilies, but not nearly enough to supply the demand. There is no doubt regarding the cut stock for, judging from the present outlook, there will be enough to go round, excepting some varieties of bulbous stock.

NOTES.

Z. D. Blackistone introduced a new idea in the way of window decorations; the arrangement was in accordance with an up-to-date millinery window. A number of hats were placed on hat stands and decorated with natural flowers. One of particular interest was the Merry Widow hat, a neat card, on which was written "Watch this window for spring styles," explaining the idea.

At a special meeting of the directors of the Florists' Club it was decided to hold the next meeting and annual banquet April 20, instead of April 6, to avoid conflicting with Easter business.

J. H. Small & Sons report a busy week; they decorated for Postmaster General von Meyer's dinner; the main feature of the decorations was a center piece of jonquils and white lilac.

J. R. Freeman is ready for Easter having an excellent stock of growing plants. He reports fair business.

STOCK OVER PLENTIFUL.

With Easter but two weeks off it is impossible at this time to have any idea as to market conditions. At the wholesale houses, the middle of the week saw everything plentiful, and business at a standstill. Carnations dropped considerably in value and were sold for any price but by Saturday they stiffened again. Roses have become more plentiful. Narcissus Von Zion was sold at $2 per 100. Fancy ferns are now $2.50 per 1,000. Trade has been dull but probably a reaction will set in before Easter and things will liven up.

NOTES.

The spring flower show closed on Friday evening with a good attendance. Preparations for the fall flower show have already started. It is expected that one of the finest shows ever given will be held in the Coliseum. Secretary Otto G. Koenig has already laid the foundation. The Henry Shaw bequest of $500 annually for prizes and the banquet having been waived will result in more money for show purposes. Business men will be invited to give cash prizes. It will be the plan of the Horticultural Society to have several modern gardens and parks in the Coliseum, so that the public will see how to beautify front and back yards. The show will be a society event and will last one week. Prizes will, at this time, be awarded for the best kept gardens within the city limits during the summer of 1909. After the show all the cut flowers were distributed to the hospitals.

Wm. Smith Wholesale Floral Co. is headquarters for sweet peas. The counters are filled every morning with very choice stock which is very much sought after and easily disposed of.

F. H. Weber has a fine assortment of flowering plants and cut flowers. A. Cineros, who has been visiting his family in Kansas City, is again in charge, with F. H. Weber as head designer.

Young & Sons have a fine lot of azaleas, lilies, lilacs, tulips and jonquils for their Easter trade. Their plant and seed trade is increasing and all hands are now busy with their spring orders.

Riessen Floral Co. has a fine stock of flowers always on hand. The firm's sales on American Beauty roses, violets and lily of the valley are immense.

Geo. Angermueller is getting in some fine stock in roses and carnations. He has quite a number of outside shippers and his trade is increasing daily.

Arthur Faerber is now bringing some of the finest white and pink sweet peas seen in this market. He expects next to build a house for violets.

C. A. Kuehn has certainly a splendid supply in choice roses and carnations, also a good supply of American Beauty roses and lily of the valley.

MARCH BUSINESS GOOD.

Business for the month just closed has been considerably ahead of that of a year ago. Trade was more active for the first three weeks than it was the last week perhaps, but on the whole there is little desire for complaint. The present week opened strong, there being the usual strong Monday demand, but the tone of the market was decidedly weak on Tuesday and Wednesday. American Beauty roses have been fairly plentiful and prices consequently low and easy. Tea roses have been over abundant, the existing demand during the entire week past not being able to clear off the stock of Bride and Bridesmaid. Carnations have been inclined to stay on the scarce side of the market, but the demand not being overly strong the past week with the exception of Monday. At time of going to press white carnations were hard to get and good stock easily brought $4 per 100. Sweet peas have been of good quality and the demand has been satisfactory. Violets have continued weak. Good singles are gradually disappearing. Bulbous stock has moved off satisfactorily the past week as it has most of the season so far. Easter lilies have been coming in sufficient quantities to meet the demand. Iris, both yellow and blue, is seen and is fine stock.

EXAMINATION FOR CITY FORESTER.

The civil service examination for municipal forester will be held next Monday morning at 117 Market street. The list, with the present vocations of the applicants, three of whom live outside of Chicago, follows: Ashby D. Chapman, telephone inspector; Jean E. Franke, florist and gardener; Frederick C. Fisher, ornamental horticulturist; Alexander H. Fisk, landscape gardener, west parks; Jacob H. Prost, assistant landscape gardener, west parks; Jens P. Peterson, gardener; George W. Hendrie, East Lansing, Mich., forester; William G. McLean, Madison, Wis., park foreman; Charles Jensen, Topeka, Kans., Kansas department of forestry. The position carries a salary of $2,000 per year.

FLORISTS' CLUB GIVES CINCH PARTY.

Announcements are out for a "Ladies' Night" for the Florists' Club to be given Friday evening of this week. The affair will be a cinch party at the Grand Pacific hotel. The game will be called at 8:15 o'clock and refreshments will be served.

The regular monthly meeting of the Florists' Club occurs Thursday evening, April 1, at the Union restaurant, 111 Randolph street. The proposal of 10 new names is to be acted upon.

NOTES.

Harry A. Barnard, who has been visiting the principal American and Canadian cities in the interests of the famous English firm of Hugh Low & Co., Bush Hill Park, London, was in the city March 25-26. In his short stay he visited Hinsdale, Westen Springs and other nearby

The Pennock-Meehan Cup.

Won by A. Lange, at National Flower Show.

places and called on many in the trade. Mr. Barnard expressed himself as mightily pleased with the reception given him on this his first visit to this country. He left the city March 26 enroute to Pittsburg, Washington and New York. He stays a week at each of the latter cities and sails for home on the Mauretania, April 14.

The Poehlmann Bros. Co. has from 40,000 to 45,000 Easter lilies in flower for Easter and all well hardened off and intend to supply them for both the cut flower and the potted plant trade. Building is rapidly progressing at Plant B, some of the new houses being already glazed. This week ground was broken for a new range of 10 houses at Plant A.

Zech & Mann claim they have as fine lilies as can be grown, both quality and quantity being considerably superior to what was to be had last Easter. They will supply the trade with Easter lilies, both cut and in pots.

Geo. Reinberg has begun the rebuilding of six houses, each 26x265 feet. All his stock is in fine shape for the Easter season. His store manager, Robt. Northam, has been seriously ill since March 26.

C. W. Straley, formerly with the Fleischman Floral Co., and more recently with the Bohannon Floral Co., is now manager of the floral booth in the La Salle street station.

Wietor Bros. report having a full crop of roses to cut from for the Easter trade. At the greenhouse there is already a fine lot of chrysanthemum cuttings in both sand and soil.

In the A. L. Randall Co.'s supply department visitors are being shown a fine display of gilded wicker ware for table work and favors.

The J. C. Moninger Co. is furnishing material for a range of three houses for the Indian school at Ship Rock, N. M.

O. P. Bassett celebrates another birthday on April 2, this being his seventy-fourth.

Fred Lautenslager, of the Kroeschell Bros. Co., has been ill the past week at Geneva, Ill.

The Kennicott Bros. Co. is showing some extra fine iris, both yellow and blue.

Mrs. J. B. Deamud has been very sick for nearly three weeks.

Sol Garland, of Desplaines, has had an attack of pneumonia.

Visitors: Jean Aldous, Iowa City, Ia.; J. F. Johnson, Fort Smith, Ark.; C. A. Schnell and J. Jurgenson, both of C. A. Donaldson, Minneapolis, Minn.; Geo. F. Crabb, of Crabb & Hunter, Grand Rapids, Mich.; Harry Fisher, Kalamazoo, Mich.; J. J. Soper and wife and M. C. Sadewater, Rockford; Lester F. Benson, Indianapolis, Minn.; Harry Barnard of Hugh Low & Co., London, Eng.

Davenport, Ia.

Business is moving along quietly with a rather short supply of flowers. Carnations have been rather scarce for the past two weeks. The sweet pea crop has also shortened up and violets are about done. Bulb stock is scarce. Tulips have not been nearly as good as in other seasons, many growers complaining of their coming blind. Easter is now the

general topic and everything points to a big trade.

FLORISTS' CLUB BANQUET.

The third annual banquet of the Tri-City Florists' Club was held on the evening of March 25, at the Outing club, and proved the most enjoyable and most successful event ever held by the club. Every member of the club contributed the best he had to the decorations and in consequence there was the very best of material on hand with which to do the work which was splendidly carried out. Theo. G. Ewoldt was toastmaster and, with the assistance of Harry Bills, John Temple, Ex-president Wm. Knees, Pres. O. E. Boehm, E. Bryant and others kept the guests in the best of humor. Toasts and speeches in the lighter vein, were responded to by the above gentlemen, which added much to the entertainment of the guests. A ball followed the banquet in the beautiful ball room of the club house, which also had received the attention of the decorators, green and white being the color scheme. A select orchestra furnished a fine programme of music.

NOTES.

Charles Hummel of the Sunny Side Greenhouse, has returned from a trip through Louisiana, having visited New Orleans and several other cities in that state. He reports roses and other plants in full bloom and was much pleased with his trip. Mr. Hummel brought an alligator home with him, which is a great attraction at his greenhouses. The report is that it is 18 feet long, and this is bringing him many visitors.

John Staack of Moline is without doubt the happiest florist in the three cities. Should he hand you a fine Havana, take it and ask no questions. It's a girl. T. E.

WEATHER HINDERS TRADE.

Easter is now the goal of all branches of the trade. The past week was dull in cut flowers. To make matters worse, with Thursday, March 25, came a hurricane and deluge of rain that made life miserable for all unfortunates caught out in it. On Thursday and Friday business was practically at a standstill. By Saturday, something of necessity had to move and there was a semblance of life in the market, but much stock sold cheap. All the evidence goes to show that there will be plenty of good cut flowers for Easter. What is worrying some of the

John L. O Toole, New York.
As He Appeared in the St. Patrick's Day Parade.

dealers is the question of the possibility of a monoply in plants. It does not appear that the lily trade at Easter is likely to hurt anybody very much, possibly excepting the growers who last fall put good money into bulbs and are now reaping disappointment. There will be a fair number of passable lilies in for Easter but the crop as a whole is far below expectations. It does not follow that there will be a scarcity of plants; the great quantities of fine pot roses, azaleas, hydrangeas, rhododendrons and other plants that will be offered will very nearly compensate for the lilies. Last year, we noted a tendency among buyers, which was very natural, to pass poor lilies for "something else as good." We predict that this year it will be more emphatically repeated.

March 29.—The cut flower market is very quiet with a downward rather than upward tendency in prices. While not offering predictions, the tendency seems to be toward a preference for plants for Easter. Retailers are actively engaged in preparations for a heavy plant trade.

NOTES OF THE GROWERS.

Anton Schultheis of College Point, has a very fine stock of Easter plants that will come in just at the right time. He has Lady Gay, Crimson Rambler and many other roses, all in fine condition. Though it is a poor season for lilies he has brought forward quite a lot that show up very well. A particularly noteworthy feature of his range is the great number of fine hydrangeas.

While geraniums may not, strictly speaking, be Easter plants, they are good to see at any season. John Tschupp & Co. of West Hoboken have them by the thousand and many of their finely flowered plants are being sold by Ford Bros. of Twenty-eighth street.

At the range of Pankok & Schumacher, Whitestone, there is a good Easter stock and the members of the firm say that they are already practically sold out.

J. McMullen, Whitestone, who sells his stock in the New York Cut Flower Exchange, has begun the erection of two new houses.

NOTES.

All does not seem to be harmony in the Retail Florists' Protective Association. We have received the following communication from a leading retailer: "One of our alleged leading florists, whose establishment is on one of the leading avenues of the city, advertises on a placard in his window that carnations can be had for 50 cents per dozen. If we did not know the nationality of the gentleman in question we would suppose that he belonged to the class of itinerant flower peddlers who traveled several thousand miles in order to stimulate our flower industry. The special sale ad. of the florist in question who holds office in the Retail Florists' Association sets an example to the rest of his confreres which we hope will not be readily followed. The flower business has already been cut into sufficiently, from many sources, without having the supposedly legitimate, high class man adopt such queer methods. It might be well to suggest a pension for the florist in mind, if he cannot longer survive in a business way by the manner and method he followed for so many years. The writer speaks in all charity and kindness to the object of this essay and hopes that he may still, in the near future, 'see the light' and mend his business ways."

Kessler Bros., plantsmen of 50 W. Twenty-eighth street, are showing a very fine stock of Easter plants and report good business.

Plants will be the feature at the Florists' Club April 12.

An Easter Greeting

EASTER PROSPECTS GOOD.

There was a fair amount of business doing for the season the past week. The supply and demand appear to be more equally balanced this Lenten season than for a long time, as there has been no semblance of a glut and the near approach of the great demand, practically removes all likelihood of trouble in this respect. American Beauty roses are at last becoming visible and prices have receded considerably, the specials being now offered at $5. Killarney, Richmond and Mrs. Jardine are seen of extra quality and move very well at fair prices. Carnations are more plentiful and cheaper, $3 buying very good stock. Some very choice lupines and snapdragon are seen in the windows and appear to be in demand from particular buyers who are glad of a change. New crop sweet peas are daily offerings, very choice blooms of almost Boston quality; $1 is about high. Violets are certainly on the slide the singles showing very surely that their days are numbered. The doubles will hold out for Easter which is one of their great occasions. All eyes are now turned towards next week and great preparations are being made by the dealers in order to handle the business with the least friction and most profit. He is indeed a good buyer and judge of the market, who, on the Monday following, writes across his inventory "practically nothing left." Almost all the cream of the stock has been selected at this writing. Growers are unanimous that, so far, the business has been excellent and the prospects are that a general clean-up will result. Lilies, it is said, will be short. Commission men are going about buying stocks which are required in addition to their regular consignments most of which are reported lighter than usual. After the sad experience of last year, many growers cut their bulb orders in half and their crops have been about cut in half by the unsatisfactory bulbs, some growers reporting even a greater proportion than this. Spireas are also said to be rather behind the demand.

NOTES.

A raid on the street men doing business on Market street curb was a feature last week. The goods and utensils, that is, the flowers and jars that could be gathered in before the word was passed that the "cops" were coming, were taken along with the merchants to City hall, where, after a lecture, they were discharged as there appears to be no law under which they can be fined or punished. They are declared simply guilty of breach of a city ordinance, which prohibits them selling on the curbs.

In addition to the stocks reported in the last issue, we have seen a number of well grown plants. Jacob Becker has a fine stock of azaleas and hybrid roses also hydrangeas. Azaleas and roses are nowhere seen in better shape than here, there being a good finish to everything that Mr. Becker does.

The Floracroft Nurseries of Walter Stokes are rich in hydrangeas, a very fine stock indeed. Lilies are seen here but nearly all sold. There will be the usual tens of thousands of lily of the valley, all cut. This stock is a factor in the market.

August Muller understands lilies and has a splendid lot of Giganteums losing, he says, but a very small percentage. Hydrangeas are done very well here. Azaleas several houses, and a fine lot of bulbous stock about completes the Easter stock.

Geo. Anderson has a choice lot of lilies and spireas but no hydrangeas. The stores will feel the loss of these as last season they were the talk of the town.

Griffin Bros. of Frankford have an exceptional lot of azaleas and several houses of well grown lilies. Bulbous stock is also a specialty with them.

Zimmer of Collingdale has a fine lot of bulbous stock. Hyacinths, daffodils and tulips are always seen here in quantity for the Easter trade.

The commission men say they are booking large orders from out of town buyers. Many of the houses are doing quite a business in plants.

J. W. Colflesh is strong on cinerarias, having a large house of well bloomed stock. His daisies and bulbous stock are also fine.

K.

Boston.

TRADE BETTER.

Business has braced considerably and shows a creditable volume with accompanying profits drawn from a well filled and even market. A feeling of encouragement is widespread and Easter is awaited with eager expectancy by all interests. Stock in general, both cut flowers and plants growing, has rarely, if ever, been seen in better condition. American Beauty roses are plentiful and in very fair condition; they still bring $50 per 100. The demand is encouraging and sufficiently large to keep down surpluses. Killarney is in rare form and undoubtedly will be the principal factor of the Easter rose market. The best grade easily brings $4 per dozen. Chatenay, Bride and Bridesmaid are shown in quantities but are overlooked by the buyers. Carnations present the only possible sign of shortage and the market is unable to meet the demand which is unusually large for this time of year. Prices are iron-bound and few bring less than $4 per 100. Violets will be abundant as shown by the present day receipts. Single violets have been somewhat shaky but have recovered in the last few days. Good double varieties are at a premium. Gardenias are available in quantities while cattleyas are practically outside. Lilies are going to be plentiful and, so far as can be judged, from present appearances, will be superior as a whole to the usual Easter crop. Many of the stores have contracted for specially grown stock and the best results are expected, proving more satisfactory to the parties at both ends.

NOTES.

The sights to be seen at Thos. Roland's establishment at Nahant pays many times over the value of the time involved. Here may be seen an enviable collection of the leading commercial plants every one of which is primed for the Easter holiday. Easter lilies by the thousand form an important feature, but for beauty give way to the elegant specimens of acacia, of which, in this one establishment 30 different varieties are shown, genistas, bougainvilleas, azaleas and cyclamens. Months ago contracts were made for the distribution of the entire stock and everything is in readiness for the final call. The display from this establishment at the spring exhibition of the Massachusetts Horticultural Society was the finest ever staged and easily won the first award.

— Caplan, a retailer at 144 Massachusetts avenue, was in the local court Friday under the charge of violating the Sunday law. Presenting the argument that his door was locked while he was working up funeral designs inside had no effect and he was fined $15. A watch, closer than ever, is being maintained, especially in this section of the city, and storekeepers are undecided whether or not it is profitable to risk their chances.

Carl Runge, age 13, son of Otto Runge the grower of Wakefield, was accidentlly injured by the explosion of a cartridge from an old Springfield rifle last Saturday. The youth is at the Massachusetts general hospital and while not mortally wounded, it is feared he will lose the sight of one eye.

The children of the west end schools were allowed to visit the flower show of the Massachusetts Horticultural Society. They were conducted through the hall and the names of the flowers and their varieties were explained to them.

W. H. Elliott having outgrown his salesroom in the Back Bay is seeking new quarters in the same section where his stock may be better handled under the able supervision of his agent Al Hutson.

Wm. Winton, formerly connected with W. E. Doyle's Beacon street store, has established a retail store in his own name at City square, Charlestown.

Sydney Hoffman has procured a new four seated Buick runabout which he uses to good advantage both for business and pleasure.

Thos. Conners, for many years with G. W. Sutherland, has joined the force of J. Newman & Sons on Tremont street.

B.

Buffalo.

TRADE QUIET.

The weather is very changeable and not good for the advancement of Easter stock. However, the local growers have their stock far enough advanced to get it in all right. Trade has been on the quiet side with the exception of a few banquets to prominent visitors.

NOTES.

The opening of J. Benson Stafford's new store on Main street was the feature of Saturday, and Mr. Stafford is to be congratulated on the beautiful store. The interior is designated as a pergola, the color scheme, blue, ceiling and walls, with the woodwork white with green lattice work on each side of the mirrors. An icebox about 40 feet from the front in white, is very attractive. The furnishings, such as tables, desk and all things that go to make up an up-to-date place are to be seen there. The stock was of the choicest and the best wishes of the trade are with Mr. Stafford.

Advance displays are to be seen in Palmer's and Anderson's for Easter in the plant line which looks good for a fine lot of stock. S. A. Anderson was appointed one of the commissioners to appraise the land needed by the city as a turning basin in the harbor. It is a very important commission and goes to show that in important things florists are usually chosen.

The East Side Business Men's association was never in a more flourishing condition than now and it is said that it is due to the untiring efforts of President Charles Shoenhut, the William street retailer.

J. Rowland Cloudsley of the Lenox Flower Shop has changed his lighting system and put in a room exclusively for boxes. His conservatory has been repainted and all looks good for Easter.

The next meeting of the Florists' Club will be presided over by President Slattery when he will announce his committees for the ensuing year.

Jerry Brookins of Orchard Park has been ill for two weeks but hopes are entertained for a speedy recovery.

Miss R. M. Rebstock has painted her store and generally brightened up for Easter.

W. C. Burchi of Pine Ridge has a fair lot of hyacinths for Easter.

Visitors: Mr. Smith of Smith & Felters, Cleveland, O.; M. Zirkman and S. J. Green of Philadelphia, Pa.

BISON.

DERRY, N. H.—Samuel Bloomfield of Windham is the new grower at Kingsbury's greenhouses on Franklin street.

WOODSTOCK, VT.—George F. Mass, of New York, son of Geo. H. Mass of this city, recently married Miss Emma Trumptheller.

NATICK, MASS.—It is stated that Alex. Montgomery, Jr., has acquired some 50 acres of land at East Hadley on which he will establish a commercial greenhouse plant for the production of roses.

OUTLOOK FOR EASTER GOOD.

Trade the past week was very quiet up until Friday, when all lines of stock seemed to clean up at fairly good prices. On Saturday the demand was very brisk and almost all the available stock sold at an advance over the week's quotations. Sweet peas are having a good call and the quality and quantity was never better. Lilies and smilax were very scarce at the end of the week as were also white carnations. The Easter outlook is very promising in most lines although there does not seem to be as much stock in sight as in former years; the prices quoted so far are about the same as last year but liable to vary on account of the weather. There are some grand lots of Easter lilies, both cut and in pots, that will be in fine shape and in any quantity. Some very fine samples are being shown by The Cleveland Florists' Exchange.

NOTES.

A visit to the carnation growing establishment of F. C. Bartels at North Olmsted found everything in the very best of shape. This place has the honor of producing the finest carnations grown around the city and the stock without exception shows it. The cut for Easter will be fair with good weather fully up to the average and the quality exceptional. This place produces many smaller flowers such as sweet peas, calendula and snapdragon also Asparagus plumosus and A. Sprengeri, all of which are well grown. Much credit is due Mr. Bartels for the manner in which the place is kept.

At the place almost opposite we found the proprietor, A. M. Coe, busily engaged in the houses. This place is almost entirely devoted to carnations which are well worth seeing, especially those grown in the new iron frame house that was added the past season. The cut from this place will be at its best for Easter. The finest Winsor carnations that the writer has seen are to be found here and if all growers could do it as well, most of the other varieties would have to take second place.

American Beauties

The finest in this Market.

Pittsburg Florists' Exchange

15 Diamond Sq., PITTSBURG, PA.

There has been a great deal of dissatisfaction lately at the Florists' Club meetings, but through the resignation of several members we hope the meetings will be more in harmony, as some of the younger members withdrew in honor of the older heads.

The weather here at this writing (Monday) is a regular March blizzard with a very heavy snowfall which will shorten the cuts in all lines considerably.

Visitor: B. Eschner of Rice & Co., Philadelphia, Pa. FORESTER.

Providence, R. I.

Prospects for Easter are as good as in the past, and we know of nothing on the short list. Violets are going a little slow the past two weeks, but the quality still holds good. The trade has not indulged to the usual extent in publicly announcing cheap sales on these flowers.

O. H. Williams & Son Co. are bringing in some very large Dutch hyacinths in 6-inch pans, three bulbs; these retail at 50 cents. They have a big supply for Easter.

C. S. Macnair swung the circle last week, taking in the prominent cities in southern Massachusetts and northern Connecticut. He found Easter stock in plenty.

The Keller Co. make a daily special display of violets and pansies in a fine outdoor glass case which never fails to catch the attention of passers-by.

T. J. Jonnston & Co. have refurnished and painted their larger delivery wagon, and have used a new style of lettering which is very pleasing.

F. E. Saunders who has a neat stand on Elmwood avenue, always has a good window display. M.

THE DALLES, ORE.—March 20 was celebrated as rose-planting day here. The City park received the attention of the women of the Sorosis club. Trees, rose bushes and shrubbery, which had been donated by citizens, were planted in the park grounds under the supervision of the women of the club. The entire afternoon was devoted to the work. The park was donated to the city about three years ago through the efforts of the women of this club. In the future rose-planting day will be observed annually in this city.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

CABBAGE under the new law pay a duty of 2 cents each instead of 3 cents.

SOME fire engines at Chicago were busy 15 days at the Dickinson fire.

CHAS. P. BRASLAN, San Jose, Calif., is rejoicing in the arrival of Princess Olga, a 12-pound girl, March 27.

VAN ZANTEN & Co., bulb growers of Hillegom, Holland, celebrate their twenty-fifth anniversary this year by the issue of an unusually elaborate catalogue containing illustrations of their establishment and portraits of the members of the firm.

LONDON reports March 15 an old fashioned winter which is severely damaging plants standing in the open growing for seed purposes. The full extent of the damage cannot yet be told. Very good fill-in orders have been received by the London trade from America while offerings of contract orders have also been liberal.

NEW YORK, March 31.—The following were present at the second hearing of the Callan pure seed bill March 30: Messrs. Sherman, Bennett, Gordinier, Nott, Forbes and Duryea. It is thought the bill as now amended along the lines of adulteration will be reported favorably by the committee on agriculture.—Marshall H. Duryea.

FRENCH BULBS.—Advices dated March 19 are to the effect that the syndicate will defer taking any action in the matter of prices until next month on account of the present unfavorable weather conditions. The freezing weather which has prevailed will probably be followed by a more seasonable temperature, but a continuance of the present conditions would interfere with the development of the bulbs and might endanger the crop.

CHICAGO.—The seed business generally has been picking up with the milder weather.—Prices of onion sets rule about the same as last week with reds and yellows at about $1.75 and $2.75 to $3.10 for whites.—There is a good demand for early seed potatoes with most varieties well cleaned up.—Oats are scarce and the demand strong.—Contract prices on the board of trade March 31 for grass seed were noted as follows: Prime timothy, $3.80 (nominal), white clover, $16.—J. C. Vaughan is in Washington this week on tariff matters.

THE sugar beet growers have evidently had a session with the tariff committee, as a new clause has been added to the law, No. 246, which reads: "Beets, including sugar beets, 25 per cent ad valorem."

Proposed New York Seed Law.

In reference to a preliminary meeting, called by the writer at the Hotel Ten Eyck, Albany, N. Y., Monday evening, March 22, at 8 p. m., in order that some action might be taken regarding Assembly Bill No. 736, introduced by Assemblyman Callan, the following seedsmen were present or represented at the hearing:

E. E. Bruggerhof, of Thorburn's, New York.
Alex Forbes, of Peter Henderson's, New York.

Women Seed Dealers in Paris.

Quai De La Cite.

Edward F. Dibble, Honeoye Falls, N. Y.
F. H. Ebeling, Syracuse, N. Y.
Geo. H. Price, Albany, N. Y.
J. M. Lupton, Mattituck, N. Y.
H. W. Gordinier, Troy, N. Y.
Chas. Eckstein, Buffalo, N. Y.
M. Parker, of Rice Seed Co., Cambridge, N. Y.
Nott Seed Co., Troy, N. Y.
Barber & Bennett, Albany, N. Y.
Sherman & Eberle, Albany, N. Y.
Fonda, Rochester, N. Y.
James Vicks' Sons, Rochester, N. Y.
Mandeville & King, Rochester, N. Y.
Averill, Rochester, N. Y.
Hathaway, Rochester, N. Y.
Crossman Bros., Rochester, N. Y.
Briggs Bros., Rochester, N. Y.
Brewster, Crittenden & Co., Rochester, N. Y.

The above mentioned parties were also present at the hearing of the bill which took place at 2 p. m. on the following day before the committee on agriculture, C. Fred Boshart, chairman. No definite conclusion was reached at the hearing, but Chairman Boshart suggested that we appoint a special committee of seedsmen to draft a bill and co-operate with Assemblyman Callan, and to report to the committee on agriculture again March 30.

With reference to this act, "To amend the agricultural law, entitled 'An Act in Relation to Agriculture, Constituting Chapter One of the Consolidated Laws,' in relation to inspection and sale of seeds," we understand the penalty for violation of the law as expressed in Assemblyman Callan's bill is as follows:

Every person violating any of the provisions of this chapter shall forfeit to the people of the state of New York the sum of not less than fifty dollars nor more than one hundred dollars for the first violation and not less than one hundred dollars nor more than two hundred dollars for the second and each subsequent violation. When such violation consists of the manufacture or production of any prohibited article, each day during which or any part of which such manufacture or production is carried on or continued, shall be deemed a separate violation. When the violation consists of the sale, or the offering or exposing for sale or exchange of any prohibited article or substance, the sale of each one of several packages shall constitute a separate violation, and each day on which any such article or substance is offered or exposed for sale or exchange shall constitute a separate violation. When the use of any such article is prohibited each day or any part of which said article or substance is so used or furnished for use, shall constitute a separate violation, and the furnishing of the same for use to each person to whom the same may be furnished shall constitute a separate violation. Whoever by himself or another violates any of the provisions of articles three, four, six, eight and nine, or sections three hundred fourteen and three hundred fifteen of this chapter or of section one hundred six, one hundred seven and one hundred eight of this chapter, shall be guilty of a misdemeanor, and upon conviction shall be punished by a fine of not less than fifty dollars nor more than two hundred dollars, or by imprisonment of not less than one month nor more than six months or by both such fine and imprisonment, for the first offense; and by six months' imprisonment for the second offense.

This is a matter of vital importance, and we fear, owing to the rush of business at this time of the season the matter is not having as careful attention as its importance warrants, and it is sincerely hoped that there will be a good attendance of the seedsmen at the next hearing which is set down for Tuesday, March 30.

MARSHALL H. DURYEA,
Second Vice-President of American Seed Trade Association.

Lawyer Flays Gov't. Seed Distribution.

To the Honorable, the President of the United States of America:

I enclose herewith two packages which apparently have been sent me through the courtesy of the congressman from this district. I appreciate his desire that I experiment with the carrot, cucumber and other seeds supposed to be contained in the packages, but frankly I have no use for the seeds at this time, and if I had, I would prefer to purchase them from a local seedsman, and so far as I am informed, every honest man in this community has the same feeling in regard to the matter.

During the first 26 years of my life I lived in the country on a farm, and government seeds were sent freely to my home and homes of my neighbors, and I never knew the slightest good to come from the practice except that possibly a few easily moved individuals might have imagined that they were in close touch with their congressman, or the department, and had their vanity appealed to in that manner. I have been a resident of the city of Rockford for the past 12 years, and during 10 years of that time have been a practicing lawyer, and have

Improved Teneriffe Onion Seed
Generally called Bermuda. These seeds can only be obtained in the U. S. through seedsmen and dealers, and not through growers' associations. **Varela's Improved Onion Seeds** will give best satisfaction to growers. Insist on getting them It will pay you.
Federico C. Varela, Teneriffe, Canary Islands

marked the approach of each successive spring by liberal supplies of government seeds being received through the mails by hundreds of citizens of this city who literally have not one inch of land upon which to plant seeds, or experiment with them in any way whatever.

I venture to state that the free distribution of seeds on the part of the government in this country accomplishes no good whatever, either for the individual farmer or for scientific agriculture, and it has always been a matter of surprise to the writer that the system has not been long since overthrown.

Yours respectfully,
FRED E. CARPENTER.
Rockford, Ill.

Imports.

During the week ending March 20, imports were received at New York as follows:

McHutchison & Co., 127 cases plants.
Wm. Elliott & Sons, 14 cases plants, 13 pkgs. trees.
P. Ouwerkerk, 21 cases trees.
A. Rolker & Sons, 15 cases plants.
Frank H. Darrow, nine cases trees, 10 pkgs. seed.
Yokohama Nursery Co., two cases shrubs and trees.
C. C. Abel & Co., two pkgs. plants.
J. M. Thorburn & Co., 71 bags seed.
Vaughan's Seed Store, two cases bulbs.
To others, 251 cases, 62 pkgs. plants, 12 cases trees and shrubs, 49 cases bulbs, 587 bags clover seed, 141 bls. clover seed, 394 pkgs. clover seed, 1,052 bags millet seed, 681 bags seed.

During the week ending March 27 imports were received at New York as follows:

McHutchison & Co., 221 cases, 20 pkgs. plants.
Wadley & Smythe, 112 cases, 15 pkgs. plants.
P. Ouwerkerk, 69 cases trees.
W. Elliott & Son, 54 cases plants.
H. F. Darrow, 52 cases plants, 13 pkgs. seed.
Stumpp & Walter Co., 51 cases plants.
Vaughan's Seed Store, one case plants.
A. T. Boddington, two cases bulbs.
Schulz & Ruckgaber, 220 bags seed.
Brown Bros. Co., 212 bags seed.
H. Nungesser & Co., 104 pkgs. seed.
To others, 261 cases, 235 pkgs. plants, 1,292 pkgs. shrubbery, eight cases shrubbery, 11 cases bulbs, 20 cases lily bulbs, eight cases roses, 480 bags seed, 280 bags clover seed.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

PARSLEY may be sown outside at any time now if the soil can be got into good condition.

PLENTY of air moving about the young plants of tomatoes, eggplants and similar stock is absolutely necessary at this time.

DURING the week of March 20 onions sold in Covent Garden market, London, at 18 shillings per cwt. of 112 pounds. Forced rhubarb brought 18 shillings per dozen bunches, same having sold at Christmas for 14 shillings. These high prices are said to be due to the exceedingly cold weather.

Halifax, Mass.

VISIT OF BOSTON GARDENERS.

One hundred and fifty-three members of the Boston Market Gardeners' Association left there March 20 for this city where they were welcomed by Walter E. Lenk, superintendent, and his brother, Edwin Lenk, and thoroughly inspected this plant, which includes eight large greenhouses with packing house, office, etc. The houses are now filled with crops of lettuce, cucumbers and a few tomatoes. After the inspection the guests were shown into the shipping house which had been transformed into a banquet room, where a fine lunch was thoroughly enjoyed. A. C. Burrage, who was the instigator of this greenhouse plant, sent a quantity of fine oranges for the occasion from his own grove in Redlands, Calif.

After the banquet the association held its regular business meeting, followed by remarks by Superintendent Walter E. Lenk, who introduced the principal speaker, Prof. H. D. Haskins of the Hatch Experiment Station at Amherst, who took for his subject, "Fertilizers." He was followed by Prof. B. S. Pickett of New Hampshire Agricultural College, who spoke on "The Relation of the Experiment Stations to the Farmer and Market Gardener." Other speakers were: T. L. Creeley and J. O. Wellington of Belmont. The party left on their special at 5 o'clock.

South Manchester, Conn.

The California and Florida crop of cauliflower is now coming in less quantity and buyers are again inquiring of local growers for the greenhouse product. Parsley is selling readily at 30 to 35 cents per dozen, parsnips and carrots 50 to 60 cents, new greenhouse beets, $1 a dozen, bunched four in a bunch, radishes 30 cents a dozen, onions 40 cents a dozen. Connecticut weather is a trifle below the average.

At the Cheney Farm we noticed a very heavy crop of mushrooms just coming on. As this crop is bringing 50 to 75 cents a pound, the heavy cut is helping out the extra labor expense account. We also noticed that another long bench of rhubarb was going in the dark house even if it is starting in the field, and learned that this was being done to keep up a certain supply until the field crop was ready. Many thousands of cabbage, celery and tomato plants, also peppers and Spanish onion plants were seen there. Thomas L. Brown, superintendent of this farm, has delivered addresses lately at farmers' institutes on the subject of "Successful Market Gardening."

TO THE TRADE

HENRY METTE, Quedlinburg, Germany.

GROWER and EXPORTER on the VERY LARGEST SCALE of all CHOICE VEGETABLE, FLOWER and FARM SEEDS. (Established 1787.)

THE STRAWBERRY BLIGHT

Its Cause and Cure.

How to more than double the yield of crop without increasing the cost of production. A great discovery. Price of book $2.00: worth $25.00.

WM. C. TRIMBLE, Princeton, Ill.

The ground is now in shape for sowing onions, beets, lettuce, radishes and all the hardier varieties of vegetables. Onion sets are going in and rhubarb, etc., is being planted. Everyone has come to the conclusion that spraying is necessary. The currants are sprayed with some oil spray emulsion first and tree fruits later, but all are busy.

Grand Rapids lettuce is making a market for itself in the east. At last, the people are finding out that it is good to eat. The grower has found out that the variety is his choice, and the dealer has found out that it holds up fresh for sale longer than the head lettuce. It sells best under the name of Western Cos.

The Black Hall Greenhouses are preparing for another bumper crop of cucumbers; new soil is being put in at this time; the crop in the very fresh soil seems to pay for the change of soil even at this date.

Hartford market gardeners are expecting a continuance of strong competition from Boston, but do not expect to give over their markets and they are preparing for extensive planting.

Nash and Nettleton are replanting their greenhouses to Grand Rapids lettuce. B.

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points March 27 were as follows: New York, cucumbers, 75 cents to $1.25 per dozen; lettuce, $1.50 to $2 per strap; mushrooms, 25 cents to 60 cents per pound; mint, 40 cents to 50 cents per dozen bunches; radishes, $1.50 to $2 per 100 bunches; rhubarb, $2 to $4 per 100 bunches; tomatoes, 5 cents to 10 cents per pound. Chicago, cucumbers, $1.50 to $3 per dozen; lettuce, $3 to $3.50 per hamper; mushrooms, 40 cents to 85 cents per pound; tomatoes, 15 cents to 25 cents per pound; radishes, 40 cents to 60 cents per dozen bunches; asparagus, $2.75 to $4 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.75 per pound; peppers, 40 cents to 75 cents per dozen; rhubarb, 6 cents to 10 cents per pound, extra fancy, 14 cents; French endives, 25 cents to 40 cents per pound. Cincinnati, cucumbers, $1.25 per dozen; mushrooms, 40 cents to 45 cents per pound. Boston, cucumbers, $8 to $10 per box.

Sangamo

Is the new, brilliant, glistening **PINK CARNATION** shown at Indianapolis and awarded the A. C. S. Certificate of Merit, attracting the attention of every carnation grower on account of its very pleasing color, long stiff stem and well formed flowers, measuring 3 to 3 1-2 inches. The calyx is strong, and as a producer it cannot be excelled.

Orders booked now for January, 1910, delivery.

$12.00 per 100; $100.00 per 1000.

Grown and disseminated jointly.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

DANSVILLE, N. Y.—Alton Randall has purchased the nursery interests of Isaac C. Rogers here.

WE note that a dry-goods house of Seattle, Wash., is offering two-year-old rose bushes at 15 cents each. Get ready for the A. Y. P. is the selling motto.

THE Valdesian Nurseries, Bostic, N. C., say. "The greatest demand for stock in the history of our business and the outlook for the future is exceptionally bright."

CHARLES CITY, IA.—It is stated in the Des Moines Reporter that the Patten nursery in this city has been secured by the Department of Agriculture and will be made an experiment station.

ROCKFORD, ILL.—H. R. Cotta, landscape architect, contractor and proprietor of the Cotta Nursery has removed his office from 625 Rockton avenue to the Ralston building, 122 N. Church street, in order to handle more promptly his increasing trade.

A LONG article, correcting misstatements made about Cuban orange and grape fruit growing, appears in the Consular and Trade Reports for March 15. This publication is free and may be obtained by parties interested on application to the Bureau of Manufactures, Washington, D. C.

UNDER the title of "School Garden Work Announcement of the Cleveland Public Schools, Season of 1908," we have received a most pleasing and attractive little booklet containing a colored illustration of the garden at Rosedale school and many fine illustrations from photographs of the various schools showing the work of the scholars and the troops of happy looking children about their work and at "flower drill" together with interesting descriptive text. This work is evidently well under way in Cleveland and is highly praiseworthy from every point of view.

THE Fernwood Nursery has been incorporated in the state of New York with a capital stock of $70,000. The officers are B. J. Ezechel, president, J. J. Davidson, vice president and L. G. Bernheimer, secretary and treasurer, all of New York. The purpose of the Fernwood Nursery is to raise, import and export general nursery stock and to do landscape gardening, for which purpose the company has bought the estate of Lowell M. Palmer at Stamford, Conn. The estate contains the finest specimens of juniper and rhododendrons, every existent variety that will live in the United States, in very large quantities. The New York office is 53 West Thirtieth street.

Tree Agents Hit.

A bill to punish fruit-tree agents for misrepresentation recently came up for consideration in the Kansas legislature, and for two hours members from the rural districts told how they had been swindled, says the Country Gentleman. One member, a nurseryman, tried to amend the bill to make it easier for the poor agent, but the farmers voted him down and made it a penitentiary offense to sell one kind of a tree and deliver another. The buyer is given seven years in which to detect the fraud.

Gypsophila Paniculata Flora Plena.

The single type of this beautiful hardy perennial is well known as an excellent thing for cutting, its flowers being fine for mixing with others in summer much as stevia is used in winter. Although the double form of it, as shown

Gypsophila Paniculata Flora Plena.
Flowers Natural Size.

in the illustration herewith, has been in commerce for many years it has not so far become very popular though a few firms have grown it. Indications, however, point to an increased demand for it and, though opinions vary as to the need of doubling such flowers as this or whether the doubling adds to their beauty, there is no doubt that the double gypsophila is a beautiful plant, its value for cutting being even greater than that of the single form owing to its lasting qualities.

C. W. Ward and the Lumber Industry.

C. W. Ward has been in Detroit resting from an attack of nervous prostration, brought about by overwork and harassing experiences in the lumber regions of Michigan, where he has large interests, during the time of the serious fires. In a long interview given to the Detroit News Tribune Mr. Ward points out that the lumber lands, while paying taxes to the government, receive practically no protection from it while efficient forestry laws are conspicuously absent. The fact that the fire and game protections are combined, notwithstanding the fact of the forestry commission, he holds largely responsible for its "frightful waste of timber" by fires. He says "While your game warden may be a very pleasant gentleman—he has performed no efficient service in the prevention of fires." Mr. Ward strongly advises that we take a hint from Germany in forestry legislation and practice. There nothing is wasted while in Michigan alone thousands of dollars worth of valuable property is left to rot. Mr. Ward is well known to horticulturists, owing to his connection with the Cottage Gardens Co. of Queens, N. Y.

The Rose of Heldersheim.

A rose tree, that is believed to be the oldest in the world, grows against the church at Heldersheim, Germany. It is described in the Pittsburg Times and its history, or such parts of it as are known and there given, is certainly interesting. It is believed to date from the epoch of Charlemagne—the close of the eighth century and the beginning of the ninth. The local tradition has it that the rose was planted by Charlemagne himself. This great rose tree grows from a crypt under the church, the crypt having been opened at the top for the evident purpose of letting in light and air for the bush. For this reason it is assumed by many persons that the bush is older than the church itself.

The trunk, which is as large as a man's body, traverses obliquely the wall of the church, and enters the open air several inches above the surface of the ground. There it divides into five branches of unequal size. The bush covers a surface of about seven yards in height and eight in width on the side of the church, where it is kept in place by an iron railing.

A bishop named Hepilo was the first to put up a framework to support the branches of the rose, and the fact is mentioned in the archives of the church as occurring in the year 1079. An account written in the thirteenth century declares this rose tree to have been the marvel of the country round about. The ancient rose of Heldersheim is certainly something to set modern lovers of roses to dreaming. How many races of roses have been born since this veteran of their tribe was planted?

TRADE IMPROVING.

Trade is not very encouraging, although there are some signs of improvement as we advance towards the end of Lent. The weather has been seasonable, quite the average for March. Cut flowers increase in quantity and quality, although from this must be excepted, on some days, carnations which are insufficient for the demand. Roses are abundant, but they do not go off as in normal years. Violets are less abundant than a few weeks ago. The death of two prominent citizens on Monday caused considerable inquiry for funeral flowers. It is almost too early to be able to summarize the promise of stock for Easter, but, probably quite enough will be in on time. Lilies are said to be short in quantity, though some growers have been fortunate in bringing through an unusual proportion of good flowers.

NOTES.

A. R. Watkins, of Montgomery county, is a regular shipper of carnations which are near the top for quality. This gen-

WM. SWAYNE, Box 226, KENNNETT SQUARE, PA.

tleman was engaged in school teaching, went into the florist business to improve his health and reduce his weight. He has been conspicuously successful, enlarging his operations with improved health but "increased" weight.

Richard Vincent & Sons Co. had a fine display of cut geraniums at the last Gardeners' Club meeting, there being about 100 varieties shown including the novelties lately collected and some of marked beauty. The attendance at the meeting was unfortunately quite limited.

Lohr & Fritze, on the Frederick road, have been sending in some fine roses, quite the top notch of this season's offerings and notable for their evenness as to stem, size and foliage, mainly Bride, Bridesmaid and Golden Gate.

John Cook is improving. He is able to sit up daily. The recent commendation his My Maryland rose has received must have been a help to him.

The bowling match last Wednesday at Philadelphia did not bring laurels to our local team, the Washingtons taking first place and the Quakers second.

Wm. J. Halliday is recovering from his illness and back at his Charles street store.

S. B.

PREPARE FOR EASTER

From Whom Will We Purchase Our Easter Supply?

From our old friend, Godfrey Aschmann, of course. He has been our man in the past, and will be the man this year; he also will be the man in the future. He has always treated us right. What he advertises he has and he is no bluff.——An immense stock of **Choice Easter Plants** now ready for immediate shipment. Blooming Easter week or before if desired.

If you would know the fairest sight your eyes can ever see.
Where the most perfect plants are grown, to Aschmann's come with me.
Why! Ne'er since flowers began to bloom was such a glorious show
Of all the best that florists need, found in one place to grow.
The lilies are the very best yet seen on Easter day.
Azaleas are whole sheets of flowers perfect in every way
The Araucarias matchless are so are the ferns all green.
With bulbs, and plumed Spirea, the best you've ever seen
And Aschmann gives a challenge let every florist hear.
For flowers or prices, either no rival does he fear.
If you wish to gather dollars like violets in the spring
Then send your largest order, his plants the cash will bring

AZALEA INDICA.

We are headquarters for these plants for the past twenty-five years. We make a specialty of importing large quantities of this so well known favorite Easter novelty Grown for us in Ghent Belgium by an Azalea specialist Have now three houses full of the choicest. Only well known American varieties are imported They are planted in the fall, as soon as they arrive from Belgium, into 6 7 and 8 in. pots, planted in greenhouses and kept cool during winter. They are now in excellent condition covered with buds, just right for Easter.

☞ We only ship good stock and full of buds and flowers

☞ If you need Azalea plants don't look in vain around the country for bargains, but come or write direct to us. We will be able to supply you with the best obtainable in the American market at moderate prices.

☞ What is the name of the best double pink Azalea? Mme. Van der Cruyssen is the name. Originated by the well known Azalea specialist, Mr. Van der Cruyssen of Belgium. Millions are raised every year and shipped into every part of the globe from Belgium. We have a big stock on hand of this well known variety. Every plant is as round as an apple covered with buds just right for Easter Have all sizes for 60c, 75c $1.00, $1.25, $1.50 $1.75 to $2.00 each.

Deutsche Perle (double white) 75c, $1.00, $1.25 to $1.50; Bernard Andreas Alba (white) we have mostly big plants of this variety $1 50, $2.00, $3.00 to $3 50, a few at 75c, $1 00 to $1 25; Niobe (also white) 75c, $1.00, $1.25 $1.50 to $2 00 each.

Vervæneana, De Schryveriana (double variegated), 75c, $1.00, $1.25 to $1.50; Dr. Moore and Memorie de Louis Van Houtte (double pink) $1.00, $1.25 to $1.50; Apollo (red), 50c 60c, 75c to $1.00; other good varieties, such as John Llewellyn, Empress of India, Talisman, Helena Thielmann, Illustre, etc., 50c, 60c, 75c to $1.00; Professor Wolters, 75c $1 00 to $1.25.

When we are out of one color we send the next similar color; also if we are out of the size ordered, we send the next size, either above or below the price mentioned.

☞ Outside of the Deutsche Perle we have none of the small sizes of white to offer. All the small sizes of Niobe and Bernard Andreas Alba lost their buds during the winter and in transportation from Belgium. They never do good the first year, but are fine the next year.

☞ All the other varieties which we advertise are tip-top No. 1 stock.

Easter Lilies. Lilium Multiflorum, the genuine Japanese Easter lily directly imported by us. We have a friend in Japan who looks after our interests there. He picks out for us only the good, healthy ones, and marks them while they are growing, the 10-in. bulbs, and therefore he ships to us the cream of the plants of Japan. We have Lilies this year to burn; can supply, if nothing happens, every customer and others who want Lilies. If you see them growing in our greenhouses, you must all admit they are "crackerjack9"; we sell them cheap, too. Where other florists get 15c per bud, we only charge you 10c per bud for plants in 6 in. pots, having 5 8, 10 and more buds to the plant. Plants under 5 buds 12c per bud 6-in. pots. Strictly no lilies will be sold by themselves. A reasonable order of other plants must be taken with lilies.

Jerusalem Cherries, large plants, full of buds, 6 to 6½in. pots 35c, 50c.

Moonvines (Ipomœa Multiflora), best white Moonvine for which we have a world-wide reputation now ready 2½-in. pots, $5.00 per 100.

Hybrid Rose Bushes, grafted long plants, 30 inches to 3 feet high John Laing Brunner, Magna Charta etc 6-in pots 50c 75c to $1.00. **Rambler Dorothy Perkins,** etc., 5½ in., 50c; **Hermosa,** 5 in. 35c: 6-in. large stock 50c.

Begonia new improved Erfordi, 5-in., $2.00 per doz; **Begonia Flambeau** 5-in $2.00 per doz

Spirea Gladstone. This variety owing to the dry summer in Holland last year is very scarce this Easter, but we were fortunate enough to secure sufficient to fill our usual house, and the plants are now in fine condition, full of buds just right for Easter, 6-7 in. pots, 50c, 75c to $1 00 each. Spirea Floribunda, Japonica and Superba, 6-in. pots 25c, 35c to 50c

Primula Obconica, 5 in., $2 00 to $2 50 per doz.

Double Daffodils, Von Sion, best yellow, 3 bulbs in a 5-6 in. pot $2.50 to $3 00 per doz. pots.

Hyacinths, 4 best colors, King of the Blues, Grand Maitre (light blue), La Grandesse (best white), Gertrude (best pink) 4-in., $12 00 per 100.

Asparagus Plumosus Nanus, 3-in., $5.00 per 100

Hydrangea Otaksa, in bud, 6-7 in. pots, 50c, 75c to $1 00 each.

Cineraria Hyb Graddiflora, H. F. Michell's new improved strain. Our plants of this strain are twice the size of those of other years, with perfect, large, green foliage. Some of the plants are almost as large as a bushel basket. 6-in. pots, 25c 35c 50c 75c to $1 00 each.

Areca Lutescens, 4-in. 3 plants in a pot, 25c.

Ficus Elastica (Rubber), 5½ to 6 in pots 25c; 30c 40c to 50c.

Boston Ferns, 6-in pots 50c; 7-in. pots, 75c; $1.00 to $1.25; 8-in. pots $1.50.

Scottii Ferns, 5½-in. pots, 40c; 6-in. pots, 50c; 7-in. pots, 75c to $1.00; 8-in. pots $1.50.

Whitmani Ferns, 7-in., as big as a bushel basket, 75c, $1 00 to $1.25; 9-in pans, as big as a washtub $1.25 to $1.50.

Neph. Amerpohli, 5¼, 5½ to 6 in. pots, 30c, 40c and 50c; 6-in., 60c to 75c.

Kentia Belmoreana, 5 good leaves, 5¼ to 5½ in. pots 25 to 30 in high 50c to 60c; 4-in, 35c.

Kentia Forsteriana, 6 to 7-in. pots, 25, 30, 40 to 45 in. high, 75c, $1.00 $1.25 $1.50 to $2 00 each.

Kentia Forsteriana, 5¼ to 5½ in. pots, 20 to 25 in. high 50c, 60c to 75c.

The New Crested SCOTTII FERN... NEPHROLEPIS SCHOLZELI

NEPHROLEPIS SCHOLZELI

This crested sport of Scottii will hold the same position to all the crested forms of Nephrolepis that Scottii now holds to the Boston. It is entirely distinct from all others and will become even more popular than its parent, with which it is identical in every way except that the pinnæ are subdivided, giving it a beautiful crested appearance.

We have shown the plant at the exhibitions noted below and have been awarded the following honors:

SHAW GOLD MEDAL, St. Louis Horticultural Society, Nov. 3rd, 1908, for "Best plant, of decided merit for cultivation, not previously an article of North American commerce."

SILVER MEDAL, offered by the Society of American Florists, through the St. Louis Horticultural Society, Nov. 3rd, 1908, for "The most meritorious plant or flower of American origin".

CERTIFICATE OF MERIT of the Horticultural Society of St. Louis, Nov. 3rd, 1908.

SILVER MEDAL, Pennsylvania Horticultural Society, Philadelphia Nov. 3rd, 1908, for the best new plant.

CERTIFICATE OF MERIT, Massachusetts Horticultural Society, Boston, Nov. 6th, 1908.

CERTIFICATE OF MERIT, Dutchess County Horticultural Society, Poughkeepsie, N. Y., Oct. 30th, 1908.

CERTIFICATE OF MERIT, Morris County Gardeners and Florists' Society, Madison, N. J., Oct. 30th, 1908.

CERTIFICATE OF MERIT, Chestnut Hill Horticultural Society Philadelphia, Pa., Nov. 4th, 1908.

We are booking orders now, which will be filled in strict rotation June 1st, 1909.

PRICE: Per doz., $3 50; per 100, $25.00; per 1000, $200.00. Twenty-five supplied at hundred rate and five hundred at thousand rate.

HENRY A. DREER, 714 CHESTNUT STREET PHILADELPHIA, PA.

HEADQUARTERS FOR

ARAUCARIAS

"By jingo," was the remark of a bright looking gentleman, as he stepped with his lady friend into one of our Araucaria houses. "If these are not the best shaped and finest looking specimens of **Araucaria Robusta Compacta, Glauca** and **Excelsa** I have ever seen, *then I am a shade.* ☞ Just look! What a sight this time of the year, one as nice as the other!"

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favoritei n their household, as a good omen. As big as an elephant, for 75c; as big as a jumbo for $1.00; and as big as a holy terror, for $1 25 to $1.50.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3 00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful snd beautiful. Specimen plants, 6-7-8 in. pots, 4-5 year old, 4-5-6 tiers, 20-25-30-32 in. high, same in width, $1.50 $1.75, $2.00, $2 50 to $3 00 each.

Araucaria Excelsa, 3-4-5 year old, 4-5-6-7 tiers 6-in. pots, 20-25-30-35 in. high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

GODFREY ASCHMANN

Importer, Wholesale Grower and Shipper of Pot Plants.

1012 W. Ontario St., PHILADELPHIA, PA.

Single Violet Plants

Last call for

BARONNE ROTHSCHILD.

The most profitable variety ever offered the trade. We can book only a few more orders this season. We shall grow this exclusively next season for flowers. Strong rooted runners or divisions, $10.00 per 100; $2.00 per doz.

ADMIRAL AVELLAN IMPROVED.

A seedling of Avellan, but much superior in every way. Fine winter bloomer; large, pansy-shaped flowers, purplish red. Dozen, $2.00. Stock very limited.

PRINCESS OF WALES.

Strong, carefully selected divisions from healthy stock. Ready now. $2.00 per 100; $12.00 per 1000; 500 for $7.00.

Physostegia Virginica Grand.

Texas Heath.

A bed of 100 plants will net you more than a quarter acre of asters. Splendid cut flower. Plants from open ground, $7.00 per 100; $2.00 for 25.

CUT FLOWERS SCARCE FOR EASTER.

Business conditions the past week were very satisfactory in every respect. Roses were in good supply and of good quality, the demand being satisfactory. Carnations moved unusualy well and were of good quality, the supply being almost adequate. Bulbous stock is in good supply and contiues to sell well. Violets of good quality have a fair demand. Lily of the valley is in good supply and sells well, the quality being very good. The supply of green goods is a little better. From the present outlook there will be a good supply of plants for Easter, but cut flowers will be scarce.

Jacob Schulz, as usual, has a very choice lot of flowering plants coming in just right for the Easter trade.

CEMENT BENCHES

Far West.

E. H. HUNT, 76 Wabash Ave., Chicago, Ill.

Gentlemen:—Your favor of March 10th with regard to cement benches was received during my absence. We have now erected about seven hundred linear feet of cement benches, using the Wittbold clamps. So far these benches have been used entirely for plants in pots but we are now planting one bench with Boston ferns. We are placing the drainage holes about five inches apart. We find the cost, including labor and material, to be considerably less than the cost of wooden benches with bottoms of two-inch lumber.

Yours truly,
J. A. VALENTINE.
Denver, Colo.,
President S. A. F.

Home.

E. H. HUNT, 76 Wabash Ave., Chicago, Ill.

Dear Sir:—Your inquiry regarding the Wittbold Cement Bench received and in reply would state that we like them very much, and will install them in all of the new greenhouses which we are going to build. They are cheaper than wood to build, and we can see no difference in the stock grown on them and that grown on wooden benches.

Very truly yours,
BASSET & WASHBURN.
Hinsdale, Ill.

Middle West.

E. H. HUNT, Chicago, Ill.

Dear Sir:—In reply to your letter of inquiry regarding Cement Benches, I beg to say that last summer we erected one bench as per your instructions, using your clamps and molds. This has, so far, proved satisfactory; it is much stronger than a wooden bench; I really believe it to be indestructible. The cost is considerably less than put up of lumber (of course you must consider the lumber forms, etc., in the way of an investment); for instance, to a bench 112 feet by 8 feet, we used 6½ barrels of cement, which cost $1.80 per barrel, or $11.70 total; 500 corks cost us $3.75; wire netting I had on hand; we used the old ashes on which pot plants had been standing; also the old sand that had been used for propagating, so you see the bench is not very expensive. The greatest cost comes in putting up the wooden forms, and the labor connected therewith, but will say that in the future, as soon as benches rot out, they will be replaced with cement benches. I have just finished two more benches, hence the delay in answering your letter. Thanking you for the inquiry, and hoping this will be of benefit to our brother florists, I am

Yours truly,
J. A. PETERSON,
Cincinnati, O.

E. H. HUNT, Chicago, Ill.

Gentlemen:—Yours of the 10th inst. to hand, in regard to cement benches built by us. We have used same for the propagation of roses with good results. In regard to drainage holes we made them promiscuously, about eight inches apart, and filled same with sphagnum moss, packed in loose, just tight enough to hold it in place. We expect to build another one for Carnation propagation next year. For pot plants I think it is the real thing for propagation. We may put in another bench for Carnation growing for trial next fall. Hoping this information will prove of benefit to you, we remain

Yours truly,
MIAMI FLORAL CO.,
Dayton, O.

Far East.

E. H. HUNT, Chicago.

We have grown roses on cement benches, principally Killarney, and as far as I could judge all during the season, watching them closely I can see no difference in the plants between those grown on cement and wooden benches. .... I have made plans to put cement benches into another house 22x350 this summer instead of wood.

Yours very truly,
ROBT. SIMPSON, Clifton, N. J.

Write us to-day for particulars and we will tell you how to save 25% on your bench bills.

E. H. HUNT,

76-78 Wabash Ave., CHICAGO.

About the Giant Arch Greenhouse.

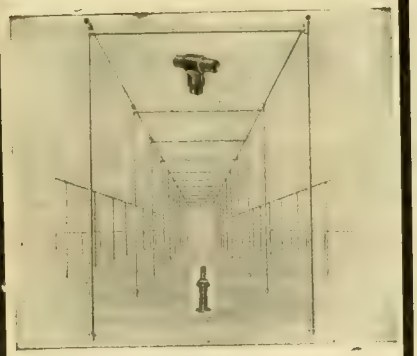
IT is the next best to our Sectional Iron Frame Greenhouse. In fact all the metal parts are of iron. When concrete sides are used, the bars and vent sash and doors are practically all the wood there is in it.

That Giant Arch is a "tower of strength" and right where strength is needed.

The top cut shows the column clamp that makes the arch, and lower cut shows the arch made.

In erecting, you put the arch up first and use it as a scaffold, which saves you time and money as well. See Handy Hand book, page 7. Then let us explain the many other Semi-Iron points to you.

Lord & Burnham Company
1133 Broadway,
NEW YORK.



CINCINNATI, O.—Leo Fern has leased a store on West Fourth street.

RIVER FALLS, WIS.—The River Falls Floral Co. has purchased two acres of ground near its present plant and will put it into garden truck the coming season. The company is gradually enlarging its business to meet the demands upon it.

MILWAUKEE, WIS.—A premium list of $5,000 is expected to bring plant growers from all over the country to the flower show of the Florists' Club, to be held November 14 to 18. If it is possible to secure the Auditorium it will be held there as it is expected that upward of 100 outside growers will wish to make exhibits.

Nashville.

Trade has been passing through the usual Lenten dullness, hanging on only by funeral work and a few complimentary flowers. Stock has been good usually, and in great profusion. The up-town retailers have brightened their windows with jonquils which have been banked together until the windows were one glow of yellow. In a few more days the lilacs will be in bloom, but these being outdoor grown, and in profusion all over the country, cut but little figure with the trade. All the growers are now preparing to meet the Easter demand. The Joy Floral Co. is bringing in quantities of hydrangeas which are showing up finely. This firm will also have handsome Crimson Rambler roses, which always prove good sellers. These, with Easter lilies and all kinds of bulbous stock, will meet the demands of all customers. Geny Bros. will be strong on Easter lilies, having several hundred which will be in good shape by Easter morning. They have azaleas and bulbous stock in plenty and will be prepared to meet their usual large demand. As it is with plants, so it will be with cut flowers, roses, carnations, lilies and the cut hyacinths, narcissi, and tulips of every color.

A pleasant matrimonal event was the marriage of Miss Elizabeth Ophelia Schmidt, daughter of Arnold Schmidt, to William Edward Wilkerson, a young bank clerk. The residence was handsomely decorated with pot plants and palms for the wedding, which was an evening affair with pretty arrangements. The bride carried a bouquet of Bride roses and lily of the valley, made chatelaine style and her veil was caught with a spray of natural orange blossoms. The attendants carried pink roses. Two little flower bearers brought in the ring used in the ceremony buried in the heart of a rose. M. C. D.

20 Years in Service

MOREHEAD
Return Steam Traps

Have been in use by florists for over **20 Years.** Could a better proof of efficiency and satisfactory service be furnished.

The Lily.

Flower of light! forget thy birth,
Daughter of the sordid earth,
  Lift the beauty of thine eye
  To the blue ethereal sky.
While thy graceful buds unfold
Silver petals starr'd with gold,
  Let the bee among thy bells,
  Rifle their ambrosial cells,
And the nimble-pinion'd air
Waft thy breath to heaven, like prayer;
  Cloud and sun alternate shed
  Gloom or glory round thy head;
Morn impearl thy leaves with dews;
Evening lend them rosy hues,
  Morn with snow-white splendor bless,
  Night with glow-worm jewels dress;
Thus fulfil thy Summer-day,
Spring, and flourish, and decay;
  Live a life of fragrance,—then
  Disappear—to rise again,
When thy sisters of the vale
Welcome back the nightingale.

JAMES MONTGOMERY.

SUGGESTIONS FOR PLANT GROWERS.

Begonia Gloire De Lorraine.

The young stock of this fine begonia and others of similar character should not be hurried at this time and considerable care is necessary that it is not overwatered. The roots as yet are weak and no great amount of growth is going on so water with care and, if the soil shows signs of souring or scaling over on the surface prick it up to allow the air to penetrate. Ventilate freely but avoid chilling draughts over the heads of the plants. It is the weak stock rushed along in heat and without air that succumbs to spot and kindred troubles. Solid plants grown slowly from the first are less liable.

Poinsettias.

It is early days to be thinking of poinsettias, but if the plants have been below stages or benches and are well dried off they may be, if room can be found for them, brought up to the light and placed on the bench. The stems will be harder and the cuttings finer than if they are left packed away until just as they are wanted for stock. Early propagation is absolutely necessary if fine plants, such as are seen around the stores at Christmas, are needed. Early rooted cuttings do not need to be rushed along in heat. They grow slowly and yet vigorously all through the summer and are so well rooted and strong that they will stand plenty of feeding late in the season, the result being fine, well colored bracts.

Left-Over Azaleas.

In the early part of the season, when azaleas are forced hard to get them on time, they are not of much value after the flowers are past but it is different with those that come along more naturally and flower at Easter. Any grower who retails his own stock is likely to have a few left over and they should not be thrown away. Let them make a good growth now and, later on, place them outdoors in a shady position where they will harden and perfect their buds for another year. Such plants, unless they have had all the young growths pulled out from between the flowers are fine for forcing another year owing to being well established when the heat is applied. And it is easy to ascertain whether they are any good or not by feeling the points of the shoots. If the flower buds are there they can be distinctly felt. If not, they are no good for forcing.

Celosia Pyramidalis.

Easily grown, showy and a first rate seller in moderate quantities the feathered celosia should be included in all collections of market plants. The room the plants take up is inconsiderable and they are growing at a time of the year when space under glass is not as valuable as early in the season. They are also out of the way before the benches are needed for winter stock and for these reasons may almost be termed a catch crop, though a profitable one. The seed should be sown at once in a gentle warmth and, as soon as germinated, the pans or flats must be brought into a good clear light to keep them dwarf and prevent drawing. When strong enough, prick the plants off at about an inch apart and, when they have thickened out a little, pot into the 2-inch size in a light compost. The treatment afterwards consists simply of growing the plants on gently in a light but not overheated house, repotting into 4-inch pots when they have filled the small ones with roots and letting them flower which they will do in late summer at a time when pot plants are on the scarce side. If larger plants or pans are needed they may be made up of several plants but the individuals attain a fine pyramidal habit that is very pleasing. If smaller plants are needed do not shift from the small pots; this forces the plants to flower earlier so seed for this purpose may be sown later. Crimson Ostrich Feather and Orange Ostrich Feather are good varieties in their respective colors. Spicata is a silvery pink form, dwarfer than the above, and there are several others.

Asparagus Plumosus.

This always popular plant is so easily grown from seed and the plants in the earlier stages take up so little room that more growers should raise their own seedlings. Fresh seed can now be obtained and it should be sown thinly at once in flats. It pays to dibble the seeds in at about one inch apart as the

young plants when they appear can then be left until they gain strength before being disturbed for potting. The first potting is the most dangerous part of the young plants' existence, but with ordinary care they may be lifted and placed in thumb pots placed in a moist house and will take no harm. Let them grow until a few inches high, then pinch the shoot which will make it thicken out at the base and probably other shoots will start when the plants may be given a shift into 2½ inch. Grow them right along in a house at about 60° at night, keep the atmosphere moist and give a thin shade. Always avoid over watering at all stages, this causing the fronds to lose color.

Double Primulas.

Of late there have been a few inquiries for the old double white primula and where there are plants of it it may be worth while propagating a few. Seeds may, of course, be procured, but there is no such thing as a pure double strain and plants have to be propagated by division. The old plants should be turned out of their pots and a little of the surface soil removed also any of the older leaves that may be in the way. They should then be planted out on a bench of very light sandy soil and the side growths cut partly through low down and pegged down to the soil. Here they will soon root if kept moist and may be taken up and potted separately. When there are only a few plants the old method of piling up sandy soil and chopped sphagnum moss around the base of the plant and cutting them in the same way may be practiced. There would not probably be a market for a great many plants but a few could be disposed of to particular customers each season at a fair profit.

Bedding Stock.

Not an inconsiderable part of the grower's profit, especially if he be located near a cemetery, comes from bedding plants of cheap and showy kinds and, as soon as the Easter stock is out of the way, these will need attention. Geraniums that have been standing close with the pots almost touching must be spread out and the shoots pinched for the last time. This will have the effect of hardening the growth, swelling out the stems and the new shoots that start from the pinching will be nicely in flower by bedding out time. Where there are still later cuttings in the benches these must be potted right away. These should have had the center pinched out already and, when potted and stood well apart, will soon make nice little plants in 3-inch pots though they will never come up to the earlier propagated stock. All the smaller stock such as lobelias, ageratums, alternantheras and alyssums should be kept on the move now. Never let the plants get hard and produce flowers. Keep any chance flowers that do appear picked off and by pinching to good wood and seeing to it that the roots are not starved, keep the plants in cultivation. As soon as the coleuses like Golden Bedder and Verschaffelti are well rooted pinch the points out and either pot or flat them, another batch of cuttings for late plants being put in. Small flats should be prepared and a dozen or two of such bedding annuals as asters, zinnias, stocks, dianthus and others be pricked off into them, giving the plants room to develop. This will be found far better policy than selling boxes crowded thickly with seedlings as such never give satisfaction to customers. Cannas must not be kept any longer in the semi-dark positions where they are wintered but be brought up to the light on the benches and started if not already done. The divisions may be somewhat thickly set out on the bench at first but later will need more room either by planting farther apart or by potting separately. Vincas, Cineraria maritima and all other stock for bedding, marguerites for window boxes and baskets and all this class of stock must be kept on the move. Once checked and allowed to flower, in small pots or crowded in flats, and that is an end of its usefulness as far as first class stock is concerned.

THE RETAIL TRADE

WITH each issue the popularity of our supplements increases and we have received many very flattering letters from retailers who find them most useful as guides to their patrons. When customers can be shown designs and know approximately what their purchases will look like when finished, much dissatisfaction afterwards is often prevented. The pictures should all be carefully preserved and kept in a folder near the sales counter or customers' desk.

Pretty Small Basket.

Hyacinths and Cyrtomium Falcatum.

Church Decoration.

The most prominent features of a church decoration for a wedding is the banking of palms and flowering plants on the pulpit platform or in and about the chancel, depending upon the architecture of the edifice. These should be arranged so that, if possible, the plants can be seen individually or at least the most perfect should stand out giving character to the work. The flowering plants should be clustered rather than spread over the whole group the effect being more striking. A generous fringe of wild smilax, should the platform be high, gives a nice finish. Tall floor vases filled with long stemmed roses, lilies or chrysanthemums relieve the somberness of the green when large flowering plants are not available. The pew ends along the middle aisle when decorated with clusters of flowers add very much to the effect. Torches of flowers on tall poles placed at intervals either side of the aisle so as not to interfere with the view are used for an elaborate display. Where there is a chancel railing clusters of cut flowers arranged here so as not to interfere with the view are always a feature. K.

A Wedding Decoration.

SEE SUPPLEMENT WITH THIS ISSUE.

Large wedding decorations do not, unfortunately, come very often to retailers, but there is something very attractive in work of this description. In a fine decoration, which was carried out at a Philadelphia church, the idea was to give the effect of an arbor clothed with climbing roses in full flower, and this was very finely carried out by the use of over 6,000 white and pink roses, mostly Bride and Bridesmaid, attached to laurel branches in a natural manner. The space thus covered with roses was about 12 feet high and some 75 feet in length, and the effect of the pink and white flowers in such rich profusion and yet in no way crowded or stiff, gave great satisfaction to the florist's patrons and elicited unstinted praise from all who saw the decoration.

The arch of the baptistry was treated with Easter lilies in small vases on rods while other trumpet or horn shaped vases filled with the same flowers were used below. White roses were placed at the pew ends, caught up with white ribbon, while low palms graced the edge of the platform in front of the baptistry. Although the picture, from a flashlight photograph, gives a very good idea of the general effect, it does not show the beautiful color scheme or the delicacy of the pink roses in the subdued light, which was unique in its way. In connection with church decoration it may be well to call the attention of workers to the need for extreme care in fixing their flowers so as not to injure the structure in any way. The flowers often have to be arranged in front of polished woodwork, yet so skillfully must the work be carried out that not a scratch is made. Stout tacks, driven in the upper side of the cornice rail, and the wreaths of laurel and flowers suspended from this, do away with the necessity of driving nails into the wood. This must be carefully kept in mind, for if once the fabric in these sacred buildings is in any way injured by a florist it is only reasonable to suppose that the incumbent of the church will forbid anything of a like nature being repeated.

Preparations for Easter at Chicago.

Easter, the great holiday for the florists, will not find Chicago retailers unprepared. With the memory of last year's excellent business to spur them on there is every probability that they will all endeavor to again break their own records and, if this is not possible, they will make a good showing and try to keep them up at any rate. There is a fine lot of cut stock on the market in almost every line and plants are in great shape and in good variety. The azaleas were probably never finer than at this time while bulbous stock, though possibly not as plentiful as on some other occasions, has been and is very good in quality. The double Jaffodils are excellent, while tulips, hyacinths and lily of the valley are all good in their respective ways.

Calling on Harry Rowe at the end of the week we found him busy preparing those elegant baskets of his which are always a feature in his displays. He has chosen his stock well as it is not

fully open or fully matured and will be the better for a day or two in the store. It was, of course, too early to see much of what he proposed doing but he is looking forward for an excellent trade and will be well equipped for it. The cut flowers are fine, sweet peas in all colors, Killarney and Richmond roses and other popular varieties being in first class order. Some fine rambler roses in variety too are quite a feature here. Further along Monroe street the Bohannon Floral Co. and John Mangel are both making excellent displays that should insure them a good share of the transient trade around the holiday.

At Fleischman's on Jackson boulevard we found a very fine show of plants and Geo. Wienhoeber will have, as usual, some surprises for the patrons of this store for Easter. We specially noted a very fine lot of azaleas in variety, large, healthy, well-flowered stock evidently grown in the clear air of the country and finely finished. A. Lange had his full force busy and his advertising methods are certainly bringing him in the business. His dollar boxes of flowers are still very popular and one or two of these in the window, resting on a groundwork of yellow daffodils thickly mossed was drawing a large crowd when we were there. Funeral and design work have been good here and Mr. Lange looks forward to a fine Easter business.

Wm. J. Smythe at Thirty-first street and Michigan avenue is preparing for a big trade. He has some very tasty and attractive wicker ware this season which is quite new in the west. On Saturday his Michigan avenue window was filled with this in gold and the north window had similar ware in copper color, the somewhat dull tint showing up the flowers and foliage plants to perfection. The stock here, both in cut flowers and plants, is, as usual, excellent and one is pretty safe in predicting a good holiday business. Only the exigences of time prevented us calling on other retailers who are making excellent showings but we hope to be able to treat the subject more fully when the great day arrives.

Small Baskets and Other Devices.

The various pretty little devices of Easter plants by a well known Chicago retailer, which are illustrated herewith, give a good idea as to how customers who do not wish to spend a large amount on their Easter plants, and yet have something pretty and artistic, may be satisfied. Bulbous stock is especially useful along this line, hyacinths, narcissi of sorts, lily of the valley and others lending a light graceful effect to the smaller devices which cannot be obtained from larger, heavier plants. The ever popular Primula obconica and P. Forbesi are also very useful in this connection and a number of small ferns, tradescantias, panicums and similar small trailers are necessary for variety. Tulips in themselves are a little stiff perhaps but their bright colors are very telling and, arranged with very light ferns such as maidenhairs and the lighter pterises they are of great assistance.

Only a very small number of the many designs made can be shown but the retailer with an artistic bent and anxious to please customers of taste can think out many pretty combinations. In some of the smaller birch bark receptacles the lily of the valley, arranged with its own foliage and the deep green of Cyrtomium falcatum is choice and telling, the grace of the lily bells being sufficient without any other small foliage though if preferred by the customer green panicum drooping over the edge is very pretty. With the stiffer flowers of the Dutch hyacinths the finely divided fronds of Adiantum cuneatum or even A. gracillimum is better than the larger, heavier fronds of the cyrtomium or even the pterises though the latter are excellent with narcissi. Flowers of Narcissus poeticus rising from the pretty heads of small Cyperus alternifolius have a beautiful appearance, telling yet chaste and the many combinations that may be worked out with small plants of foliage begonias, Pandanus Veitchi, dracænas and others are too well known to need recapitulation.

BASKET BY WM. J. SMYTHE, CHICAGO.

Primula Obconica, Hyacinths and Nephrolepis Whitmani.

Advertising That Talks.

More and more retailers are coming to see the advantage of judicious advertising and we present herewith some of the methods that A. Lange, of Madison street, Chicago, has made use of to draw attention to his wares. The lady in white in the window shown in the accompanying illustration is no lay figure but that very much alive lady Miss Phoebe Snow (White as Snow) who has done so much to make public the good points of the Lackawana railroad. Miss Snow was in Chicago recently and Mr. Lange was fortunate in being able to induce the "lady all in white" to pose in his window for the photographer with the very charming effect shown. He did not say what wiles or artifices he used but whatever they were they were successful.

In his advertising copy Mr. Lange is very careful to have something that talks, something to draw the attention and this, coupled with good value when the customers are secured, has enabled him to work up a very fine trade in cut flowers. His "Flowers and Their "Uses" ad. in the Tribune wherein are shown an old lady who has evidently been thought of by some distant friend and is enjoying the roses just brought in by "Lange's" messenger is good. The text below reads: "Perhaps the most appreciated of all times is in the sunset of life, when a single rose may recall sweet memories of a score of years or more. Flowers help to fill the declining years with that quiet joy—fruits of being loved and remembered." There is a personal appeal about this kind of advertising that goes straight to its mark and attains the desired end.

Well executed cuts of vases and baskets of flowers also with a suitable line of talk calling attention to the merits of the store and explaining the wishes of the proprietor to meet his patrons and give them full value are other good methods practised by Mr. Lange while the "air plant" forms the subject of still another; the plant being shown and its well known (to florists) selling points reiterated. These notes and illustrations must be taken as suggestive by retailers in other towns. Each will prepare his copy to suit his individual case but will in every instance endeavor to get away from the stereotyped card and "flowers of best quality" or "fresh flowers delivered daily" of the man who wastes money on advertising. Make every word tell. It is not easy at first to do it and it is simpler to grind out platitudes and use lines that every grocer or butcher writes up in his delivery wagon but this is not the kind of advertising that talks.

CALUMET, MICH.—W. J. Bloy, of Fifth street, has purchased the Lutey Floral Co.'s business here.

PHILADELPHIA, PA.—Fifteen flower venders who were arrested March 26, charged with being a nuisance, were each fined $5 and costs at the Central station the next day. Their arrest was in consequence of an order issued by Director Clay, in which he called attention to complaints having been made by Market street merchants that the venders had blocked their doorways and had in other ways made their presence objectionable.

ORCHID NOTES.

CATTLEYA WARNERI is known as the spring flowering labiata.

WATER Odontoglossum grande freely until the bulbs are completely filled out.

CATTLEYA GASKELLIANA flowers upon the newly formed growths or pseudobulbs, C. Mossiæ on those of last season.

To induce freedom of flowering keep Cattleya gigas, C. aurea, C. Hardyana and C. Dowiana as close to the light as possible except in freezing weather.

LET Calanthe Veitchi and C. vestita make a good root before watering at all freely. Overwatering in the early stages is a frequent cause of black rot.

Notes on Commercial Orchids.

SUMMER FLOWERING CATTLEYAS.

It is not uncommon to see all the six summer flowering cattleyas, namely: C. Mossiæ, C. Mendelii, C. Warneri, C. gigas, C. Harrisoniæ, and C. Gaskelliana, in bloom at the same time. Under cultivation they all appear to come in bloom in May and June, consequently, at this season, the flowers are plentiful and cheap. Yet it is quite possible for experienced growers to obtain blooms in rotation from the middle of March until August. The demand for a few weeks after midsummer is never very great, but those growers who are able to meet it are always well repaid for their trouble. It may be an art to bring cattleyas into flower ahead of the season or to keep them back for a few weeks, but, whatever it is the knowledge is rarely gained theoretically and often it is only recognized by accident. The only sure way is to watch the peculiar habits of the different species and varieties and this takes many years of observation.

Cattleya Mossiæ lends itself quite easily to culture for a few years after it has been received from its native haunts. It grows very freely when first imported and commonly makes two and three flowering bulbs from each lead in a season which rarely fail to produce flowers in great quantity, and it is possible to get many plants in bloom for Easter. Even if it does come early good prices are always realized. The difference in the prices obtained for the flowers at this time from that received for the later blooms is so great that it is well worth a little effort to accomplish. To have Cattleya Mossiæ in flower by the middle of March it is necessary to keep a winter temperature at night between 60° and 65° in a nice, airy house, but avoid a moist, stuffy atmosphere for this is sure death to the majority of cattleyas. Like the other species already described C. Mossiæ, after finishing it growth, needs a long rest and during the resting period does not require so much water at the roots, but when the buds are visible in the sheath, water may be given in abundance with advantage. Early in the fall this cattleya begins to root very freely from the base of the newly developed bulb, and this is a very good time to repot all plants that require it.

C. Mendelii comes into flower in succession to C. Mossiæ and succeeds well with the same treatment. C. Warneri is too expensive to get in quantity, but is a useful free bloomer, usually flowering in May. This differs very much in the time of growth from the above, as it generally commences to grow about Christmas and makes its bulbs quite rapidly, which, when developed, throw flowers in most cases right away. After they are cut the resting period for this species begins. When this cattleya is grown with success it pays well, even if it is more expensive to import, for the blooms are always good sellers, even if there is a glut of flowers of other species in the market. The resting season of this species is during the summer months; keep it fairly dry at the roots at this season, only giving sufficient water to prevent shriveling.

C. gigas is a shy bloomer with many growers; the varieties differ very much, so when buying be sure to get the plants from a reliable firm or the money will be as good as thrown away. The true C. gigas Sanderiana is the one to secure for spring flowering, while C. Hardyana type is better for later use. To flower these cattleyas it is essential to have an airy house such as is suitable for C. Mossiæ, but let the plants be kept at the cooler end for choice. Like C. Warneri, it starts to grow in winter, but must not be watered to any great extent till the new growth is two inches or more high. Then it requires plenty, at least two or three times a week. It grows very rapidly and must not receive any check through lack of water or other causes till the flowers are developed, then decrease the water supply gradually. After the blooms are cut new roots will start from the base of the last made bulb and then repotting must be attended to. Afterwards a daily syringing and an occasional watering is all the plants require for seven or eight months, as this species needs a decided rest to do it well. The flowers often bring double the price of those of C. Mossiæ and always sell well, the bright, rich color taking with buyers.

As a rule C. Gaskelliana is unsatisfactory with many growers; yet with care it is most profitable. To get this species to bloom in July and August it must be wintered in a shady house at a temperature of 55°. Like the two above, it begins its growth in winter but must not be hurried or it will be in full flower at the same time as the other summer cattleyas, which, for profit, must be avoided; hence the necessity of a little care. Many growers have great trouble with the flowers rotting in the sheath, which proves that the hot sun is a detriment. A little heavier shade and drier atmosphere will overcome this fault. Any one accustomed to cut this cattleya when in bloom will notice a quantity of water or liquid in the sheath. This liquid, if the sun shines on the sheath, gets hot, to the injury of the flowers. Like the two preceding cattleyas, this species often flowers directly its new bulbs are made, yet many plants will stand still as it were for a month or more before pushing up their blooms. This is no detriment, but a benefit, for it is the means of producing later flowers and, as a rule, such flowers are always of better quality, being slower coming to maturity.

C. Harrisoniæ is of quite a different habit to any of the former, the bulbs being thin and long, throwing five or six flowers from the new bulbs as soon as they are matured. No undue forcing is required, or the flowers will come early just when there is a glut, and at such times it is very hard to dispose of the flowers, as they are so much smaller than others in season. If judgment and care is bestowed on the plants they can easily be brought into flower at a time when other cattleyas are scarce, thereby proving very profitable and useful to the commercial grower. These long bulbed cattleyas as a rule deteriorate very fast if not watched carefully. Look out for the new roots that come from the base of the latest made bulbs of both this and C. Gaskelliana and repot if needed as soon as noticed, but do not saturate them continually after the flowering season as they, like other summer cattleyas, enjoy a long rest and must have it if their life is to be prolonged under cultivation. To grow all the above varieties in one house needs care, yet it is often done successfully.

THE DAHLIA.

DAHLIA EXHIBITION.—We are in receipt of the schedule of prizes for the second annual exhibition of the New England Dahlia Society, to be held at Horticultural Hall, Boston, Mass., September 10-12. Copies of the premium list may be had on application to the New England Dahlia Society, 5 Union street, Boston, Mass.

The Cultivation of the Dahlia.

An ideal spot for the cultivation of the dahlia is one lying well to the south—if gently sloping all the better—where the soil is a well-drained, well-manured, heavy loam. If these latter conditions do not exist naturally, let them be artificially arranged for as nearly as possible, because nothing conduces more to the production of dwarf sturdy plants and large fine flowers than a strong loam, says Robt. Fife, Rothesay, Scotland, in the 1908 edition of the Memoirs of the Royal Caledonian Society. Shelter from high winds, and especially north or easterly gales, must be in existence or provided. An abundant water-supply, in the event of very dry weather, can hardly be too close at hand. Deep cultivation of the soil is advisable and, while good results are often obtained by spring digging, where possible the land should be prepared in autumn, and again thoroughly worked in spring. The requirements of the grower will, to some extent, decide the methods of manuring, but it may be here observed that over-manuring of dahlia land is not an everyday occurrence.

The beginner should procure his plants from a reliable establishment, where an up-to-date collection is kept, about the middle of April, or any time up till the first week in June—the earlier the better, if good results are to be expected. The plants should at once be placed in 3-inch pots and transferred to a gentle bottom heat for about two weeks. At the end of this period the plants should be placed in 5 or 6-inch pots, using a rich compost, and replaced for a week or two in moderate bottom heat, with abundance of air to keep the growth strong and short-jointed. Careful attention to watering, airing, and protection from frost will occupy the grower's mind until the first week in June, before which, it is not safe to plant out dahlias.

PLANTING.

Dahlias may be planted in the way most convenient to the grower, but a space of four feet between the plants—when set out in a block or line—is a fair average distance. Many successful cultivators plant much closer than this. Have the stakes in their places previous to planting, thus avoiding any chance of injury to the roots, while the plants, if well grown, will require support at once. As a rule it is advisable to manure the plants individually, rather than collectively, and by this method there is no waste of manure. Make a hole, 15 to 18 inches wide and 12 inches deep, close by each stake, and fill the same with a good rich prepared compost. Turn the plant out of the pot and plant amongst the compost on the side nearest the stake, press the soil firmly around the root, and tie the stem to the support. Frosty nights in June are not uncommon and a sharp lookout must be kept.

With the advent of warmer weather, slugs and insect pests may prove troublesome. Lettuce leaves scattered amongst the plants, or a few seeds of the same sown on the beds, will afford sufficient feeding for the slugs and great protection to the plants at the same time. Green fly and thrips may be kept under control by a judicious use of insecticides and frequent syringing with clean water; but no insecticides should be used when the plants are in flower, or the blooms may be spoiled. Earwigs often prove troublesome during the flowering period, but they may be trapped by placing small pots, containing a little paper or moss, on the top of the stakes or amongst the branches. The pots should be gone over daily, and the insects removed. A tuft of cotton-wool tied round the flower stem with fringe outwards is also a preventive.

THINNING AND TYING.

Early in July the plants will have made good growth, and constant attention should be given to thining, staking side shoots, and tying. Show and fancy dahlias are best trained to a center stem, with four of the strongest sides shoots left. Cactus dahlias may have more branches retained, but all depends on the size of the flowers required and the purpose for which the plants are grown. By judicious manipulation of the remaining shoots, flowers can at all times be had in readiness for exhibiting after the flowering period has set in. Those who wish to grow for garden decoration or cutting small flowers only, will stake and tie, but need not thin out or disbud freely. Pompons are all the finer when blooms are small and neat, and these should not be thinned out or very strongly grown. Singles of all sorts are mainly used for garden decoration, and on this account can hardly have too many shoots; but, if fine exhibition blooms are wanted, recourse may be had to moderate thinning or disbudding.

With the continued growth of the plants, and especially if for exhibition purposes, judicious feeding will be necessary. A heavy mulching of half-decayed stable manure will prove of immense value, and an occasional dressing with a good artificial manure considerably increase the size and texture of the flowers. Copious watering in dry weather must not be neglected. Rain, hail, and wind occasionally leave sad tales behind them, while earwings and small slugs may disfigure the more promising blooms; all this shows the necessity for unremitting care and attention. It is well to be prepared for emergencies, and to have at hand shading and protecting materials. Boxes, with glass tops, attached to a stake are most useful. Even a piece of flat board nailed to the top of a stake serves the purpose of protection. In all cases the flower stems should be secured to prevent movement and consequent rubbing.

From the middle of September onwards, no collection of dahlias is safe from frost, and unfortunately a glorious display of dahlias may have its career cut short. Granted that the inevitable has come to pass, and the plants stand as blackened weeds, choose a fine dry day, and, after cutting the stems a few inches above the roots, proceed to carefully lift the same, remove the soil as far as possible, and lay in the sun or in an open shed to dry. Labels must be securely fixed to the roots by wire or tarred twine. It is advisable to turn the stem downwards, to permit of the escape of any moisture likely to inaugurate a process of decay. When sufficiently dried, the roots may be removed to winter quarters—any place at once cool and dry, but free from frost. Some growers cover their roots with dry earth or sand—and this is a capital idea where the roots are more fibrous than tuberous but I have found that roots laid on a bench or staging without any covering material have given excellent results. The adoption of this method permits of an easy examination of the roots, and lessens the chances of loss. If perchance a root is threatened with decay, the defective portion must be removed, and the remainder dusted with lime. This attention may not only save the root, but prevent damage to others close by.

PROPAGATION.

The middle of February will be quite early enough to take dahlia roots from their winter quarters, at which time the roots should be neatly trimmed and placed in boxes or on a warm bench in a glass house. The roots must be arranged crown upwards, and should be covered to two-thirds of their depth, the crown being left bare. In two or three weeks young growths will make their appearance, and these, if very strong and sappy, had better be thrown away as useless. Wiry growths about three inches in length make most suitable cuttings, and may be taken off with a heel if preferred. After careful dressing, and the removal of the lower leaves, the cuttings may be inserted in pots or boxes filled with somewhat sandy soil and placed on bottom heat of, say, 70°, where they will root in from 14 to 20 days. If only a few plants are required, the roots may be put to work somewhat later and broken up, retaining to each shoot a piece of the tuber. These roots may be potted up at once into 5 or 6-inch pots, but the plants from cuttings will, when rooted, take 2½-inch pots to begin with, shifting into larger sizes as required.

Such is a brief outline of dahlia culture, which I hope may be of some interest. Growers differ in their methods to attain the same ends, and some good may be found in every system. The dahlia has attained to a great eminence in the horticultural world, from which it cannot easily be dislodged, and my impression is that we are on the threshold of another great movement or break which will have a far-reaching course. The present classes are nearing their limit of perfection, and may in the near future have, like the stage carnation, primula, cineraria, begonia, and the superb rose, to give place to scalloped or frilled edges, more plentiful if not so perfect flowers, or some other undeveloped property quite apart from the ideals and aims of the good old florists of the years gone by.

Trouble With Gladioli.

ED. AMERICAN FLORIST:—

We have several thousand gladioli corms under a carnation bench. Between the sheath and the corm they are covered with green fly. We have used tobacco dust and slug shot dusted on them, also put them in boxes and covered them up, and smoked with nicofume; but with no effect. Now we are removing the sheath. Is there any better way of remedying the trouble? Would they be so affected if they were in a cool dry temperature? E. L. N.

It is not often that green fly is so persistent on dry or partially dry bulbs or corms. Probably "E. L. N." has done the best thing possible in removing the sheaths, provided only the loose ones have been taken and the corms are not skinned. Plunge them in a tank or tub and shake them well up. Leave them for a couple of hours and then remove them and place them thinly on a sunny bench to dry. This should finish the green fly without in any way injuring the corms as it is so near planting time.

TORONTO, ONT.—H. G. Dillemuth has opened a branch store at 123 King street west that is quite above the average of retail stores. He has gone heavily into mirrors and other first class fixtures and his electric lighting is on a very elaborate scale. He reports a success from the start and a large amount of transient trade from adjacent hotels and theaters.

FLORISTS' FERNS.

Fern Propagation.

The multiplication of ferns requires such scrupulous and minute care that it has remained largely in the hands of specialists who cultivate the fern of the markets; most gardeners and amateurs content themselves with buying the plants, and try less and less to propagate them themselves. For this reason the knowledge of the mechanism of reproduction of ferns seems to be gradually dying out, which is a pity, for it is a process especially full of interest.

Fig 1—Rhipidopteris Peltata.
Showing Sterile and Fertile Fronds.

We will describe first the process of the natural reproduction of ferns, with the aid of the engravings from A. Buysen's excellent little book, "La Culture des Fougères Exotiques." This process consists of three distinct and successive phases: Fructification in the adult plant; germination, which produces an intermediate form; and the fecundation, which produces the young plant. The brown spots of differing ferns that we find on the under side of the fronds of ferns are masses of fructification, which are called sori, and which are sometimes encased in an envelope called an indusium. In some cases the sori are borne upon fronds of entirely different form from the typical fronds of the plant. In Rhipidopteris peltata, the fertile fronds are entire (Fig. 1); in other varieties (osmunda, aneimia, lygodium, etc.), they are divided in the extreme, to the point that their character is almost entirely lost, and the sori appear to be carried directly on the veinings. Each sorus is a group of sporangia, or spore-cases, which contain the spores, or sexless reproductive cells of the plant. When these spores are ripe, the wall of the sporangium breaks, often bursts like a balsam fruit, as the result of the contraction of a ring which encircles about two-thirds of their circumference. The spores thus escape and, if they fall into favorable surroundings, germinate.

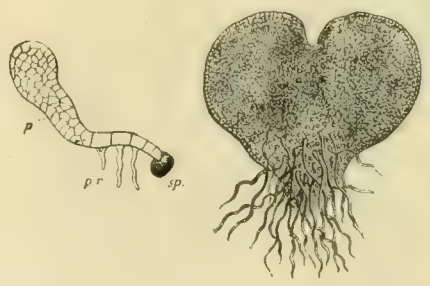

Fig. 2.—Prothallia, Young and Developed

The spore, when it begins to germinate, gives birth to a cellular production, called the prothallium, green in color, at first formless, but finally becoming, in most cases, rounded or oval, hardened at the extremity. (Fig. 2.) The prothallium is the intermediary form of the plant in which fecundation takes place, and from a botanical point of view is the most important state of the plant, although the phenomena which take place can only be observed with the microscope. The prothallia are seldom more than one-tenth of an inch in length, and lie upon the moist soil, to which they attach themselves by false roots or radical hairs. The prothallium bears on its under side the antheridia and archegonia, male and female organs. It is able, especially at its edges, to ramify and multiply itself by the separation of its branchings. After fertilization the germ-cell of the archegonium develops into a frond-bearing plant.

The antheridium contains minute corpuscles, rolled in spiral form, which are called antherozoids (Fig. 3), and which are provided with tiny vibratile hairs which serve as oars, when, being discharged from the ripe antheridium, they sail with great rapidity upon a droplet of water in search of the archegonium. It is these antherozoids which take the place of the pollen of flowering plants. The archegonium (Fig. 4) assumes the role of ovary and contains the oösphere, which, after fecundation by the antherozoid, becomes the oöspore from which terminates the true fern plant (Fig. 5).

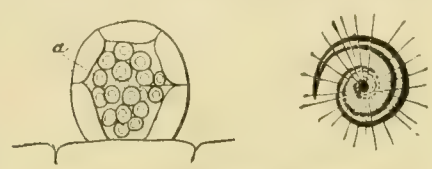

Fig. 3—Cup Containing Antherozoids.
Antherozoid on Right.

Such is the mechanism of reproduction in the great majority of ferns. Some again are viviparous, that is, they produce young plants on certain parts of the fronds themselves. A great number, not to say nearly all ferns, are also multiplied by division. The multiplication by spores being well understood, the discovery of M. Chifflot, of the faculty of sciences at Lyons, that by cuttings of the prothallium, the rate of increase may be greatly augmented, is of the greatest interest. We quote the conclusion of his essay: "It is generally admitted that the prothallium usually produces but one plantlet. This is true if the plantlet is left in place, but in-

exact if it is delicately removed and repotted, which may be done if it has attained a certain strength. The removal of the plantlet stimulates in the prothallium the germination of another oösphere and consequently of another plantlet, this process being repeated four to six times, at least. It is possible even, the prothallium having attained its largest size, to cut it into five or six pieces, placing them face downward on moist sphagnum, and obtain from each piece a perfect plant. This cutting of the prothallium, which has seemed extraordinary to many growers, is easily explicable. The antheridia generally number 30 or 40, and produce a great number of antherozoids to certainly insure the fecundation of all the archegonia, of which the number is much smaller. The oldest cell germinates first and produces a plantlet; if this plantlet is allowed to evolve in place, it absorbs as nourishment the prothallium and its contents, including the younger oöspheres; if, on the contrary, the plant is removed, a second germ develops and produces a second plantlet, etc." With a degree of skill, patience and a good magnifying glass, the experimenter will find much in this field to interest him.—Revue Horticole.

Notes in Season.

Many growers still prefer to sow their own fern spores and thus to follow the stock through all stages of growth, while others buy the stock in flats ready for potting off, from one of the large dealers, and thus avoid the tedious work of the earlier operations of fern growing. These flats of fern seedlings are usually from a late fall or early winter sowing, the young plants having been pricked out into shallow flats just as soon as they were large enough to handle, and are then allowed to remain in these flats until large enough to be potted off. There is, however, much to interest the grower in raising ferns from spores, and while these operations have many times been described in these columns yet a brief reference to them may still be in order at this season.

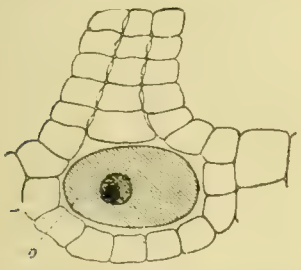

Fig. 4—Archegonium With Its Oospore.

Pots or pans six inches in diameter is the size usually used for fern spores, and these should be perfectly clean, as any fungoid growth on the pots or in the soil is likely to cause trouble. These pots are filled to within 1½ inches of the top with either cinders or potsherds, and then fine light soil pressed down firmly and made smooth on the surface, the latter being a little below the edge of the pot, so that it may be covered over with a pane of glass. A soil composed of equal parts of loam and peat, without manure, and sifted through a fine sieve, is that most favored for this purpose, and if this has been sterilized by baking over a fire for a short time before being used there will be less trouble from weeds and insects. The pots should be thoroughly watered, giving sufficient to moisten the soil all through, after which they should be allowed to drain for an hour or two before sowing the spores.

Fig. 5—Young Fern Plantlet Growing From Prothallium.

The spores are sown thinly on the surface of the soil, the sowing being done in a place that is free from drafts, else many of the spores may be wasted. Then place the seed pots in a sash-covered frame in the greenhouse, and cover the pots with panes of glass, the idea being to protect them from sunshine and also from drying out until the spores germinate. In fact, the tender young growths that first appear, somewhat like a green fungoid growth on the surface of the soil, should never be exposed to full sunshine, nor should they be allowed to become very dry. In case it should be necessary to water the seed pots, the best plan is to dip the pot in a pail of water, to avoid any watering of the surface at this time. A night temperature of 60°-65° is best for the spores, and a few degrees warmer in the day will do no harm. When the seedlings are large enough to handle, that is, about the time the first frond appears, they are transferred in small blocks to other pans or flats in which they remain until enough growth has been made to enable one to pot them, these early operations in fern growing being a matter of rather careful and tedious work.

The time required for the raising of ferns from spores to a size large enough for potting off into 2-inch or 2½-inch pots varies with the species and also with the season, spores that are sown in the autumn taking more time to develop than those of the same species sown in the spring, but some of the quick-growing pterises will be ready to pot in six months from the time of sowing, while others may take from eight to ten months to reach the same stage of development.

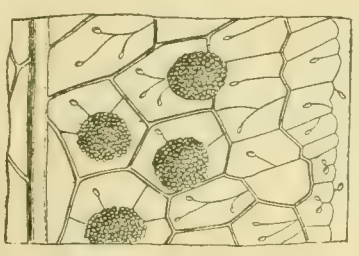

Fig. 6—Magnified Sori of Polypodium Aureum.

In the handling of small ferns one of the rules is to give plenty of fresh air, but to avoid drafts, and another is to gradually inure them to sunshine until they can stand full exposure, thus producing those short-fronded, sturdy little plants that give such good results in a table fernery. Insects seldom give much trouble with small ferns, unless it be in the form of an attack of thrips, and this may be controlled by careful fumigation with one of the nicotine preparations, or in severe cases by spraying with nicotine solution, using one part of nicofume to 300 parts of water. Snails create havoc in the fern house, but these may either be trapped or poisoned with Paris green and sugar or corn meal.

W. H. TAPLIN.

Cement Bench Construction.

This topic is becoming more important each year owing to the increased price of lumber, and the fact that in a few years it decays and has to be renewed, which is not only a source of annoyance to the grower, but also a large item of expense. A properly constructed cement bench will last as long, and even longer, than the greenhouse itself. It is conceded, without exception, by those growers who have grown stock on both benches that they do not see any difference between the stock grown on cement benches and that grown on wooden benches. It has been tried with all classes of stock. Robt. Simpson, Clifton, N. J., is growing roses on cement benches and says there is no difference in the stock grown on cement benches and that grown on wooden benches, under the same conditions. This is true with carnations, bedding and bulbous stock, and decorative stock.

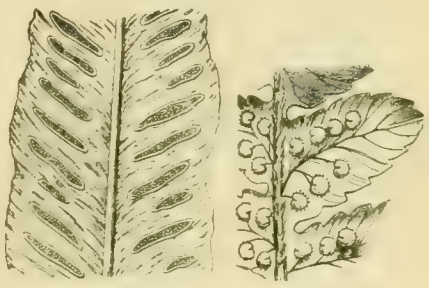

Fig. 7.—Sori of Scolopendrium Officinarum on Left. Sori of Aspidium, With Indusia on Right.

One of the most practical benches consists of one piece construction. In other words the sides, bottom and posts are as one continuous piece of cement. Briefly, this construction is as follows: Temporary posts, 2x4, are driven in the ground within five inches of the height of the bench. These posts are in two rows, each post in the row four feet apart and each row four feet apart.

On the top of these posts are run 2x4 stringers, standing on edge. On these stringers are placed cross boards, 1x6, and cut six inches longer than the desired width of the bench. Every eighth and ninth board from the end has a half circle cut out so that when the edges of the two boards are placed together a round hole five inches in diameter

will be formed. There should be two rows of these holes, each hole four feet apart and each row four feet apart.

Under these holes the soil should be removed, digging a hole about eight inches in diameter and four inches deep, filling same with wet cement. Into this wet cement the cement posts should be imbedded, so that the top of each post comes flush with the cross boards, or flooring. It is easier to distribute these cement posts and to imbed them in the wet cement as the flooring is being constructed. On the cross flooring of 6-inch boards a clamp should be nailed or screwed, spaced four feet apart on each side. Against these clamps a side board, seven inches wide, should stand on edge.

When the outer boards are placed wire netting should be run the entire length of the bench, and so turned up as to come flush with the top of the side boards. After the wire netting is placed another board, six inches wide, should be placed in the inner part of the clamp. After this is done the cement is ready to be poured. When the cement is poured this will give one inch of cement on the sides and one inch of cement on the bottom, and this wet cement will thoroughly unite with the top of the cement posts already placed.

Drainage slots are made from a shell of iron sheeting, six inches long, one inch wide at top, and one and a half inch at bottom, and containing two grooves into which the wire netting can be fitted. This method of drainage is preferred by some while others prefer the round holes made after the cement has partially hardened by the use of the drainage tool. These holes can be spaced as near or far apart as the requirements of the soil or conditions may require.

After the cement is thoroughly hardened the 6-inch inner board can be removed, the inner part of the clamp be taken, the temporary posts removed, and the stringers and flooring will then drop, and the lumber can be used for the construction of other benches. The complete bench is simply one continuous piece of cement, with one-inch side board and one inch of cement flooring, supported by 5-inch posts. There are no other supports or obstructions except these posts. Such a bench, using the Wittbold clamps, can be constructed at a cost for material of 2¼-cents per square foot.

C. M. DICKINSON.

Begonia President Taft.

Begonia President Taft, which originated with J. A. Peterson, Cincinnati, O., as a sport from B. Agatha is much stronger than either the latter or B. Gloire de Lorraine. It is a free and continuous bloomer from November to April, each flower being as large as a silver dollar. It has been somewhat freely exhibited the past season and among other awards, received a bronze medal at the National Flower Show at Chicago and a certificate of merit from the Pittsburg and Allegheny Florists' and Gardeners' Club, Newport Horticultural Society and the New York Florists' Club.

Growth of the German Potash Industry.

Consul-General Richard Guenther writes from Frankfort that the potash production of Germany at present represents about 750,000,000 marks ($178,500,000) of capital and employs 28,000 miners and work people. The yearly sales of potash are $24,000,000, the trade being controlled by a trust. In 1908 this combine added nine new mining companies to its membership, while this year 13 new works will go into operation, and also controlled by the potash trust. Germany alone consumes for soil fertilization nearly half the potash salts annually produced. There has been much speculation among German investors in shares of potash production companies.

To Be Done Now.

IN THE GREENHOUSES.

Any old leggy dracænas may be cut up into lengths of stem with about two eyes and used for propagating. Strike the tops in the bench or in bottles of water.

Allow tuberoses time to get well established if possible before introducing them to heat for forcing.

Take special care of the young rose stock and never allow it to get hard in the 2-inch pots. Repot and keep the plants growing freely or good results must not be looked for.

Propagate stevia by cuttings on the bench and as soon as well rooted pot

Begonia President Taft.

As Grown by J. A. Peterson, Cincinnati, O.

the plants or place them in flats in a cool house.

Sow in quantity asters, sweet sultan, zinnias, scabious and other annuals for cutting. A night temperature of 55° is ample.

Throw away the old, hard center portions of the violet plants. The young vigorous shoots or runners only must be used for propagating.

Where there is a choice use the heavier soil for own-root American Beauty roses and the lighter for grafted stock.

Gardenias will take more moisture. See that the lower part of the soil on the benches is moist as well as the surface.

Throw out all plants of sweet peas, marguerites and similar stock that has ceased to be profitable directly the Easter demand is over.

Make up plenty of small fern dishes and dishes with ferns and bulb stock so they get well established for Easter sales. They look more natural after a few days growth than when made up and sold at once.

Watch the cattleyas now in houses where the sun strikes early. The leaves are easily scorched during bright bursts of sunshine. Feel the leaves and when they are warm to the touch of a person who has been in the house a few minutes it is time to lower the shades.

OUTDOORS.

The everlasting pea, Lathyrus latifolius, and its white variety, may now be sown or planted. It is a fine subject for cutting and for planting against veranda or pergola supports.

Place a little loose litter around rhubarb crowns. The slight protection given will insure good stalks at least a week earlier than from crowns totally unprotected.

Sow sweet peas in variety on good well prepared soil. Where mice are troublesome soak the seeds in coal oil and dust a little red lead over them.

Push on with the shrub pruning, siding up the shrub borders and lifting and rearranging any portions that were borne down by snow in winter.

Where lilacs are top-heavy remove some of the older branches. If the flowers are needed for cutting they may be left to open but it is better for the shrubs to remove them now.

Thin out the growths a little on spireas where they have become crowded, but cut from the bottom; don't use the shears.

Plant mint and other herbs; the plot devoted to herbs of various kinds is often the most profitable in the garden.

Many of the native species of roses may be used with good effect on sunny banks where grass does not flourish. They are perfectly hardy and, if given a little care, very beautiful the year around.

Prepare a good supply of manure for the celery plot. Green fresh manure is not as satisfactory for this crop as that which has been standing some time and got mellow.

Plant out hardy lilies in good soil. Where this is very heavy use a little sand or road grit under the bulbs.

Partly head back any trees that have to be regrafted to save time later and finish all arrears of winter cleaning.

Flower Shows.

Detroit laments the passing of the flower show. It seems once to have been an institution in that city, but has been allowed to fade and wither. The flower show is too good a thing to let languish. The Detroit Free Press, commenting on this subject, says:

"No feature of Detroit life had greater charm than this flower exhibition during the years of its vogue. The preliminary labor necessary to give it success earned rich rewards, and it never seemed to lose its features of interest and novelty. Does anything in which flowers figure ever lose its interest and novelty? The profits of the exhibition were devoted to charity, and for a week or 10 days representatives of various philanthropic and religious organizations were brought in close contact, the results of this contact being the promotion of acquaintance and dissipation of antagonisms that were beneficial and helpful."

This serves to call attention to one of the features of life in Washington. The capital has floral riches. The blossoming season is long. Not many weeks intervene between the blight of the autumn flowers and the up-coming of spring buds and blooms. Nearly every park and reservation triangle in Washington is a public flower show. Many of the parks, notably the Capitol grounds, the Botanic garden, the Agricultural grounds, Franklin park and Lafayette square, exhibit floral beauty, rare shrubbery and a remarkable variety of native and exotic trees. In winter Washington cheers the eye with many winter gardens bright with evergreens.

Then, there are the numerous government greenhouses, with their brilliant exhibitions of plant life. In this connection there are two more features that ought not to be overlooked, namely, the school gardens and the attractive window displays which it is the custom of Washington florists to make.—Washington Star.

OBITUARY.

William Freytag.

Wm. Freytag, a well known florist of Milwaukee, Wis., aged 43 years, committed suicide by inhaling gas April 7. Mr. Freytag was despondent on account of ill health. He leaves a wife and son. The funeral will take place Saturday, April 10, at 2 p. m., from his late residence, 793 Twelfth avenue.

H.

Henry Eberhardt.

Henry Eberhardt, a well known retailer of Catonsville, Baltimore, Md., died, March 28, at the home of his son, August E. Eberhardt, in Baltimore, after a long illness. Mr. Eberhardt was born in Germany, and came to this country when young. For the last 10 years he had conducted a business on Beaumont avenue with his son, Peter. Mr. Eberhardt's wife died several years ago. He is survived by two sons and one daughter.

Charles Read.

Charles Read, for nearly a half century one of the most prominent business men of Orange, N. J., died at his home, 20 Chapel street, of Bright's disease March 30, after a short illness. Born at Brighton, Eng., in 1822, Mr. Read came to this country in 1860 and established himself during that year in Orange as a florist. He leaves a widow, three sons, former Alderman Charles Read, of Orange; W. W. Read, of Coscob, Conn., and Herbert Spencer Read, of Chesterfield, Mass., and one daughter, Mrs. William Dickerson, of Philadelphia.

William Hagemann.

William Hagemann, the well known horticultural importer, died suddenly at his residence in Bloomfield, N. J., April 3. Mr. Hagemann was at his office as usual on Thursday and on that afternoon suffered an apoplectic attack. He was taken home, but did not rally and passed away on Saturday. He had suffered from two former attacks of this nature. Mr. Hagemann, before his activity in the horticultural trade, was in the grocery line in Philadelphia and when there started his trade activity with florists and seedsmen, later moving his business to New York. He was at different times active in the export trade in other lines having shipped to Europe apples, bicycles, horses and other goods. Mr. Hagemann was very popular with the trade, frank and outspoken; always an entertaining conversationalist, he made close friends even among his strongest competitors. He was 51 years of age. He will be greatly missed by the trade in this country as well as in many cities in Europe. He leaves a wife and three daughters, married. The funeral occurred Wednesday afternoon in Bloomfield, many of the New York trade being present.

J. B. Boland.

We are sorry to have to record the death of J. B. Boland, the well known owner of the J. B. Boland Floral Co., San Francisco, Calif. Mr. Boland had been suffering for quite a while and his death was not entirely unexpected. Through Mr. Boland's death another of the old time florists has been removed, to the regret of every one connected with the trade as well as by the many friends he had amongst the business men of San Francisco. Before the earthquake Mr. Boland was partner in the firm of Sievers & Boland. They were burned out during the conflagration and dissolved partnership after that. Mr. Boland was one of the first florists to open up a store in the burned district at 47 Geary street. Here misfortune followed him again, as a fire in the temporary structure in which his store was located, destroyed his entire stock of goods and fixtures. Soon after he moved into his store on Kearny street which he occupied at the time he was taken sick. He leaves a widow who has the sincere sympathy of his numerous friends and acquaintances.

P.

The Late Edward Gill.

The late Edward Gill, whose death was chronicled in our obituary column in the issue of April 3, was one of the best known nurserymen on the Pacific coast. When the end came Mr. Gill was surrounded by his four children, John; Dr. Edward C.; Isabel and Elizabeth Gill, his wife having died in November, 1907. The funeral was held March 27, interment being in the Mountain View cemetery. Mr. Gill first came to California in 1863; after a short stay he returned to the east and, in 1867, married Mary Belle Brown. He then returned to California and settled in Oakland, where he built up a large nursery business; finding his place too small for his rapidly increasing trade in 1890, he purchased a tract of 106 acres in West Berkeley, six miles further out, to which place he removed. At his new place he made a specialty of field grown roses for the wholesale trade in which he did a large business.

BERTERMANN BROS.' (INDIANAPOLIS) DELIVERY AUTOMOBILE.

As It Appeared in the Recent Automobile Show at Indianapolis.

Bedding Plants in the South.

ED. AMERICAN FLORIST:—

We have several large urns, six feet high and about 2½ feet across at top, to fill; the customer prefers red flowers. What would you advise planting in them to stand the hot southern summers? What would you plant besides vinca at the edges to hang down? The urns are in sunny positions.

Kentucky. FLORIST.

In red flowers the salvias, Bonfire, Zurich and others would make a very fine show and stand the sun well. Some of the red varieties of geraniums are good, of course, while achyranthes are desirable showy subjects standing well. Amaranthus caudatus and A. pyramidalis are good while coleuses in variety are showy foliage subjects. There are few vines to beat the vincas for such positions though, if the position is not too exposed, Tradescantia zebrina is good. Whatever is used constant watering and judicious feeding are necessary as vases and urns soon dry out.

G.

Packing Southern Daffodils.

ED. AMERICAN FLORIST:—

Please tell me in an early issue all about the packing of daffodil flowers for shipment; when the season for southern daffodils should begin and what sorts are most profitable as cut flowers; best size of boxes and number of blooms to pack in bunches and to each box: how to wrap stems and dispose flower clusters so as to keep them fresh and unbruised. Can strawboard or pasteboard boxes be used, etc. Also please give the name of some dealers in cut daffodil flowers and bulbs.

G.

Cut flowers, such as spikes of gladioli and tuberoses are shipped from the bulb farms in eastern North Carolina in light boxes with an ice space in the middle. The earlier daffodils do not need ice, but can be packed by wrapping the stems in newspapers, well wetted, and then with paraffine paper, leaving the flowers open and dry, for any moisture on the blooms will damage them. Packed in boxes that can be had in flats and folded as needed of heavy strawboard, they will go well. I am sorry that absence in Florida prevented an earlier reply, as probably even in the elevated section at Old Fort, N. C., the bloom of the narcissus is now past. The flowers can be shipped to any of the wholesale firms advertising in the AMERICAN FLORIST. The North Carolina growers ship generally to E. Read of Philadelphia. For later flowers light wooden veneer boxes are used as ice is then needed. The season varies. Daffodils bloomed in southern Maryland this year in February and March.

M.

Fertilizing Value of Snow.

A correspondent of the Gardeners' Chronicle has been drawing conclusions as to the relative fertilizing value of snow, rain and dew and hoar frost. The nitrogen content of snow was taken from records of experiments carried out at the Canadian Experiment Farm at Ottawa, the rain and dew and hoar frost tests were made at Harpenden in England. In the latter 69 samples of rain showed a nitrogen content 1½ times as rich as the Canadian snow while the dew and hoar frost was 5¾ times as rich. This goes to prove, says the experimenter, that the value of snow as a fertilizer has been greatly over estimated by agriculturists.

THE Bermuda steamer Prince George arrived at New York April 5 with a large consignment of lily blooms.

MANAGERS of retail stores have many ingenious advertising schemes for Easter and we are always pleased to have details, with copies of booklets, circulars and other advertising matter used locally.

WE shall be pleased to have reports of the Easter business from all readers and retail florists should send photographs of good special work—designs, baskets, decorations, etc., arranged for this occasion.

GALLANT little Wales, it appears, is making strenuous efforts to substitute the daffodil for the odoriferous leek as its national emblem.

BRIGHT mornings and cold nights are conditions to be expected now. The fireman has to be very careful, especially where hot water is used, or much fuel will be wasted.

SHELF brackets, made to attach to the upright greenhouse supports are useful at this season to hold shelves for small bedding and other stock and save room on the benches.

TARIFF troubles are confronting Frenchmen and the legislators are inclined to increase the duties on horticultural products. The horticulturists are said not to favor increased duties on these lines.

A LEADING greenhouse builder is on record as in favor of free lumber. He says the price of white pine is almost prohibitive and that cypress is unsatisfactory. "Therefore," he claims, "we should have free Norway pine."

GROWERS sometimes aim to save coal by closing their houses early and allowing them to run up from sun heat. There may be days when something may be done in this way, but it is easy to go wrong and a little heat should always be kept on the pipes now, no matter how bright the day.

THE proceedings of the eighteenth annual meeting of the American Carnation Society held at Indianapolis, Ind., has been published. It is a book of 108 pages, fully describing the convention and containing much other matter of interest to the members and carnation growers generally.

A CLAUSE has now been inserted in the new tariff law making evergreen seedlings duty free. This covers, according to a recent ruling of the board of general appraisers, any plant that has been originally raised from seed and retains its leaves all the year around whether grown indoors or outdoors.

SUPPLEMENTING the continued growth in the demand for hardy herbaceous perennials there has come to the specialists in this line within the last year or two considerable inquiry for hardy ferns, and this is a most commendable departure. Among our native ferns are many strikingly handsome plants which thrive luxuriantly in shade and moisture where no other plants will live and fern growers in Europe are very enthusiastic about many of these plants which we have so long neglected.

THE ninth annual report of the Home Gardening Association of Cleveland, O., shows the good work of this institution in creating a love of gardening among all classes and helping along the idea of making our cities more beautiful by judicious planting of trees, shrubs and other plants. School gardens, home gardens and the work at the detention school are all well illustrated and several instances of good citizens having been turned out from very unpromising material at the latter are given.

A Partnership Business in Greenhouse.

ED. AMERICAN FLORIST:—

There are three parties intending to form a partnership, one to furnish the ground, the other two to invest the capital for the houses, one party be the florist and handle the business. What would be the proper way to share the profits? J. S.

American Carnation Society.

NOTICE TO MEMBERS.

Please take notice that all of the papers, etc., pertaining to the secretary's office have been forwarded to our new secretary, A. F. J. Baur, Thirty-eighth street and Senate avenue, Indianapolis, Ind. Dues, registrations and all other matters pertaining to this office should now be addressed to Mr. Baur.

Respectfully yours,

ALBERT M. HERR.

Lancaster, Pa.

National Council of Horticulture.

The third installment of the press service of the National Council of Horticulture contains timely articles on "The Wish Bone Flower" (Torenia), "Spring Pruning," "Four O'clock or Marvel of Peru" and "Preparing Soil For a Garden." Any one who wishes to reach the amateur gardener either as customer or reader, should obtain these useful articles which are free on application to J. H. Burdett, 1720 W. One Hundred and Fourth place, Chicago.

Society of American Florists.

REGISTRATION OF BEGONIA.

Public notice is hereby given that J. A. Peterson, of Westwood, Cincinnati, O., offers for registration the plant described below. Any person objecting to the registration of this plant or to the use of the proposed name is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date.

Begonia President Taft.—Description, a sport from B. Agatha; it originated in our greenhouse about two years ago. In growth it is much stronger and sturdier than Agatha or Gloire de Lorraine, to which class it belongs. In color a beautiful shade of soft rosy-pink, deeper and richer than Agatha or Gloire de Lorraine. The flowers more than cover a silver dollar. It is a free and continuous bloomer from November to April. Height about 15 to 18 inches. Foliage large, shining, dark green.

April 2, 1909. W. N. RUDD, Sec'y.

The American Civic Association.

"A More Beautiful America" is the motto of the American Civic Association, an association that is becoming more widely known and whose long continued work is being recognized by congress, by the American public and by foreign associations and sympathetic people abroad. Its press sheets are widely distributed and used and, on the principle of the constant dripping of water wearing away the rock, are, perhaps slowly, but certainly, surely awakening the public, the great trading firms, civic bodies and others to their duties as custodians in varying degrees of the many natural beauties of our country and preventing their despoilation for trade purposes.

The inartistic billboard, that everywhere intrudes its unwelcome presence, is being fought by this association. The preservation of the great cataract at Niagara Falls and its surrounding beauties of scenery, the conserving of our forests, interesting the children, beautifying of water ways, the extension of park and playground systems, and the planting of trees on the prairie states are among the more recent subjects that are pleasingly yet convincingly written up in the association's most recent budget of articles that are being sent out

free to editors of magazines and newspapers throughout the country, and their dissemination is bound to be productive of good results. While the AMERICAN FLORIST, as a trade paper, is prevented by lack of space from using many of these excellent articles, its sympathies are all on behalf of so progressive and far-reaching an institution as the American Civic Association, which has the best wishes of every lover of nature for a long continuance and expansion of its sphere of usefulness.

Meetings Next Week.

Baltimore, Md., April 12, 8 p. m.—Gardeners' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Chicago, April 14.—Gardeners' and Florists' Union No. 10615, 10-12 Clark street.

Cleveland, O., April 12, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit street.

Lake Geneva, Wis., April 17, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

Madison, N. J., April 14, 8 p. m.—Morris County Gardeners' and Florists' Society, Masonic hall.

New Orleans, La., April 11, 2 p. m.—Gardeners' Mutual Protective Association, 118 Exchange alley.

New Orleans, April 15, 8 p. m.—New Orleans Horticultural Society, Kolb's hall, 127 St. Charles avenue.

New York, April 12, 7:30 p. m.—New York Florists' Club, Grand Opera House building.

New York, April 14, 4:30 p. m.—Horticultural Society of New York, American Institute rooms.

Pasadena, Calif., April 16, 8 p. m.—Pasadena Gardeners' Association, G. A. R. hall, East Colorado street.

Rochester, N. Y., April 12, 7:30 p. m.—Rochester Commerical Florists' Association, 24 Stone street.

San Francisco, Calif., April 17.—Pacific Coast Horticultural Society.

Scranton, Pa., April 16, 7:30 p. m.—Scranton Florists' Club, Guernsey building.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc

Situation Wanted—By up-to-date stor man best of reference permanent place desired. Key 843, care American Florist.

Situation Wanted—By competent all-around florist as manager of retail establishment; must be permanent; married; references; state salary. Address Key 837, care American Florist.

Situation Wanted—By landscape architect capable of drawing his own plans, thorough in his branch, wishes to connect with a reliable firm; references. Address Key 838, care American Florist.

Situation Wanted—By a first-class gardener on a private or commercial place 12 years experience in all branches of gardening. Married, 2 children; age 33 best of reference. Address EUGENE OBERER, Roslyn L. I.

Situation Wanted—By young married man, German; a strictly first-class carnation grower; able to take full charge; am a worker and know how to handle help to best advantage; will be ready by first of June. Address Key 841, care American Florist.

Situation Wanted—By young unmarried all-around greenhouse man; can grow roses, carnations, orchids, grapes, pot plants, etc.; institution or private place preferred; excellent references; please state particulars. Key 835, care American Florist.

Situation Wanted—By young married man as grower of carnations, 'mums, vegetables and bedding plants; either commercial or private and near Philadelphia; 10 years' experience; best of references; at liberty June 1. Address Key 828, care American Florist.

Situation Wanted—A young man wishes employment in greenhouse; have had four years' experience in carnations, roses and all kinds of greenhouse plants and wishes a good place to improve himself; can bring best of references. Address Key 842, care American Florist.

Help Wanted—A competent young man to do general greenhouse work on retail place; nice place; county seat; near Pittsburg, Pa.; Catholic preferred. Key 844, care American Florist.

Help Wanted—A thoroughly competent, reliable and experienced man, to fill position in retail store in Los Angeles. Apply to WRIGHT'S FLOWER SHOP, 224 W 4th St., Los Angeles, Calif.

Help Wanted—At once a good orchid man who is capable of growing for cut flowers only; none but such need apply; state all particulars in first letter. Address F. VARDEN, 26 Summerfield St., Fall River, Mass.

For Sale—In central northern state an old established florist business over 15 000 ft. glass well stocked, about ten acres land. $2.500.00 down ballance on time to suit purchaser. Key 799, care American Florist.

WANTED.

First class up-to-date designer and decorator for my retail store. H. R. HUGHES 690 W. Van Buren St., Chicago, Ill.

FOR SALE BEES

Full colonies, $7.50; Three frames of bees with queen, $5.00.

W. C. DAVENPORT, 4166 Central St., Chicago.

Wanted—Store Fixtures.

Will buy out retail store to furnish my new place. Address, at once,

J. A. MENDEL,
422 W. 18th Street., Chicago.

Competent Bookkeeper

Open to engagement in Seed, Nursery or Floral establishment. Has had practical experience in horticultural line and speaks several languages. Could assist with other work besides bookkeeping if necessary. German, age 35. Address

Key 842, care American Florist.

Greenhouse Manager.

The advertiser is open to engagement as manager or foreman on a general commercial greenhouse establishment, preferably on the Pacific Coast; have had ample experience with roses, carnations, chrysanthemums, etc.; age 33 years; single; state salary and full particulars as to requirements. Address

Key 836, care American Florist.

For Sale at a Bargain.

My greenhouse establishment, wholesale and retail; 35,000 sq. ft. of glass in town of 10,000, 10 miles from Chicago; also dwelling and 15 lots; must sell on account of sickness. **F. R. HILLS,** Maywood, Ill.

Landscape Foreman.

Wanted foreman on landscape construction work. State full particulars as to references, experience and salary.

KLEHM'S NURSERIES.
ARLINGTON HEIGHTS, ILLINOIS.

Nursery Foreman.

We want a competent nursery foreman; good opening for right man; address at once with full particulars.

Key 827, care American Florist.

FOR SALE.

The Greenhouse Property, to Close the Estate of M. J. Lynch, Deceased.

The old established Greenhouse property of the late **M. J. Lynch,** on the South Road, near the City of **Poughkeepsie, N. Y.,** consisting of **Sixteen Greenhouses,** thirty thousand square feet of Glass, with entire stock of Palms, Roses, Carnations, Bedding Plants, and Plants of all kinds, etc.

Eight-room Dwelling, with hot-water heating and slate roof, also.

Five-room Gardener's Cottage adjoining Greenhouses.

Large substantial Carriage House.

This is a valuable location, with ample water supply, adjoining Rural Cemetery, on line of Wappingers trolley, one mile and a quarter from Court House.

For particulars apply

THE NEW 1909 EDITION

—PRICE, $3.00 POSTPAID.—

AMERICAN FLORIST CO., 324 Dearborn St., CHICAGO.

How Plants Feed.

The subject "How Plants Feed" is one that has been treated over and over again in text-books of botany, horticulture and agricultural chemistry, and in popular bulletins and articles for the general reader. The reason for its introduction at this time, says W. Lochead, in a paper read before the Canadian Seed Trade Association, in Ottawa, February 5, 1909, is that the subject deals with a question that is of perennial interest, on account of its relation to the growth and life of plants. Moreover, it is generally recognized that it is the duty of the intelligent plant-grower to acquaint himself as thoroughly as possible with the processes by which plants absorb, digest and assimilate their food. It may be stated at the outset that there are many phases of plant nutrition that are not well understood today, in spite of the wonderful progress that has been made toward a correct understanding of the laws that regulate the life of plants.

PLANT'S RELATION TO SOIL AND AIR.

The common higher land-plants, such as we ordinarily deal with, stand in vital relationship to the soil and the air. Their structure shows that they are specially adapted to this double environment. The roots which penetrate the soil are arranged so as to reach a large area of soil by means of the numerous fine branches. The tip of each rootlet is furnished with a large number of root hairs which function has organs for absorbing water and the mineral salts dissolved in it. The fibers that give strength to each rootlet are collected near the core so as to resist most effectively the pulling strains exerted by the movement of the stem.

The stem acts as a supporter of the leaves, as a carrier of the solutions taken in by the roots to and from the leaves, and sometimes as a reservoir of manufactured food. The fibers that give strength to the stem are often arranged in the form of a hollow cylinder to resist most effectively the transverse strains to which the stems are continually subjected. The leaves are specially related to the air and sunlight. They exhibit a broad surface to intercept the incident rays; they have special means for the exchange of gases; and they are the special factories for the conversion of crude sap into carbohydrates, such as sugars, starches, etc., fats and proteids.

ABSORPTION OF FOOD MATERIALS.

In this paper I make a distinction between food materials and food. Mineral salts in solution and carbonic acid gas are food materials, but they are not food for the plant. It is well to bear this distinction in mind. One can observe this difference in the germinating plant. For the first few days it is feeding upon food stored up in the seed. It would starve, as animals would, if supplied with only water, mineral salts and carbonic acid. Moreover, certain plants such as fungi and other parasitic and saprophytic plants feed normally upon food such as carbohydrates and proteids, prepared for them by other green plants.

Plants get their raw food materials, from which they make food, from the soil and the air. Many analyses of many plants and cultures in solution reveal the presence of carbon, hydrogen, oxygen, nitrogen, sulphur, phosphorus, iron, calcium, potassium and magnesium as essential to the healthy green plant. Silicon, sodium and chlorine are usually present in most plants but their presence is not essential. With the exception of carbon, which is inhaled by the leaves as CO_2, the other essential elements are taken into the plant in solution as mineral salts. The root-hairs are the special organs of absorption. The process is termed osmosis, modified to a certain extent by the protoplasm within the living root-hair cell. The root-hair is richer in organic substances than the soil is, hence there is a movement of water inwards leading to a turgidity of the cells. The soil, on the other hand, contains mineral salts in solution, which are not present in any appreciable amount in the root-hair; and the result is that these mineral salts will pass in through the walls of the root-hairs, and in like manner, will pass from cell to cell until it is forced into the vessels of the wood, through which the solution can pass up to the leaves.

At first all mineral salts in solution will pass into the root with equal freedom, but some will be utilized by the plant for the manufacture of food to a greater extent than others will be. There will come a time when certain solutions will pass in faster than others. In those cases where the salt is not used by the plant the cell sap will soon be as concentrated with regard to the mineral nutrients as the soil outside and none will enter the root-hair. This explains why a plant selects certain salts in preference to others.

THE WORK OF THE LEAF.

The leaf has very aptly been likened to a mill, with the sunlight as the power or energy; the living leaf-green cells the machinery, the crude sap and the carbonic acid the raw materials, the starch and other organic substances the manufactured products, and the oxygen and water vapor exhaled from the leaf the waste products. The presence of this mill is the distinguishing difference between plants and animals, so far as nutrition is concerned. Plants are organisms that make their own food out of the inorganic world about them. Animals are dependent upon plants for their supply of food.

The essential work of the leaf is the manufacture of carbohydrates; in fact the world's supply of carbohydrate depends upon the activity of the leaf. The leaf is structurally well adapted for the performance of its work. The delicate cells within are protected by specially thickened layers of cells above and below; just beneath the upper layer is a layer—the palisade—which absorbs the sunlight; the cells lying between the palisade layer and the lower protective layer are loosely joined together, so that there are many intercellular air spaces. In this spongy tissue the vessels and tubes of the veins of the leaf terminate; in the lower protective layer are numerous minute openings, the breathing pores or stomates which allow of movement of gases in and out. In leaves of cereals, however, there is a departure from the type of leaf described.

The manufacture of carbohydrates takes place in the green cells, but the details of the process are not yet thoroughly understood. This much is known, however: Sunlight is necessary, the leaves must contain chlorophyll or leaf-green, the plants must be living, CO_2 must be present, a proper degree of temperature is required, and potassium must be present. Apparently the formation of carbohydrates is only carried on by those specialized bits of living matter that contain the leaf-green, and is, therefore, essentially a vital process. After the CO_2 and water enter the green cells, they undergo chemical change, resulting in the formation of a soluble carbohydrate, and the liberation of free oxygen. The first stages of the making of carbohydrates are not clear, and I shall not trouble you with the disputed points. Although starch is the first visible product formed, it is now believed that glucose and fructose sugars are formed very early, and that these are converted into cane sugar and starch. In daylight the starch accumulates in the cells of the leaf, but at night when the mill is closed down, so far as the manufacture of carbohydrates is concerned, the starch and cane sugar are transformed by separate enzymes into maltose, glucose and fructose, which are carried from the leaf into and along the stem to the growing regions, and to special storage reservoirs in root, stem or seed. Cane sugar and starch must then be considered as temporary reserve or storage substances, since the first sugars formed are not carried away as fast as they are manufactured.

Giving Away Plants Illegal.

Forbidding the giving away of plants is a matter which, apparently, has as yet attracted little attention at the state house or among the public, says the Boston Traveler. These words, however, may be picked from a bill seriously proposed by the state board of agriculture and backed by Secretary J. Lewis Ellsworth:

"It shall be unlawful for any person to give away within the state any plants commonly known as nursery plants unless such person holds a grower's certificate or an agent's license and unless a copy of such certificate or license shall accompany each package given away."

Folks who happened to look this bill over are wondering if it will not be a great help to the nurserymen. It provides a fine of not less than $25 or more than $100 for each and every offense of giving away your own plants. The title of the bill is "An act to provide for the protection of trees and shrubs from injurious insects and diseases."

Greenhouse Building.

Buffalo, N. Y.—W. J. Palmer & Son, four connected houses, each 23x382 feet; C. J. Hewson, two houses, 32x108 feet each; G. Basler, one house 36x75 feet.

Philadelphia, Pa.—Geo. Burton, one greenhouse 27x150 feet.

St. Louis.

TRADE DULL BEFORE EASTER.

The week just passed has been a dull one. Carnations, however, especially white, have held a stiff price, also white roses. Sweet peas are daily becoming more plentiful and of fine quality. Owing to the cool weather some good violets are seen, but the majority are small and the public seem to be tired of this flower for this season. The cry all over is that flowering plants and lilies will be scarce for Easter, but it is certain that a great many will be shipped in.

NOTES.

Park Commissioner Scanlan will shortly throw open to the general public that portion of Forest park that has been closed, the World's Fair grounds. Fair Ground park, formerly known as the race track will also be open to the public shortly. The park is being laid out and will be one of the finest in the city.

It is reported that the early closing movement among the wholesalers will be extended. They will endeavor to close at 5 p. m. daily and 12 a. m. Saturdays and Sundays during June, July and August.

Walter Retzer, formerly of the St. Louis Seed Co., will shortly leave the city to take up a position with the Honduras National Railroad Co.

The Florists' Club will meet next Thursday, but the near approach of Easter will probably cut down the attendance.

Isaac Spacht of Jerseyville, Ill., was in town; he reported first class trade all winter with prospects of good spring trade.

Last Tuesday Oscar R. Beneke, son of J. J. Beneke, was married to Miss Stella Tunse. The wedding was private.

A. Jablonsky is cutting some very fancy carnations and roses.

A new entrance and public baths are being erected at Carr park.

Fred Ammann is cutting some fancy Mme. Chatenay roses. W. F.

Cleveland.

TRADE VERY BRISK.

Trade the past week has been brisk in all lines and most stock is sold before it arrives. This is especially true of carnations, with roses a good second. Bulb stock has a good call, the best in years, perhaps on account of the smalier quantities grown. Lilies of all kinds are selling readily and the prospects are very good in this line from now on. Some of the finest stock seen in this market is being shipped by the Lamborn Floral Co. of Alliance and handled by The Cleveland Florists' Exchange. The Easter outlook was never better with all lines cleaning up in good shape, the most noticeable fact being each day's receipts being sold at once.

RETAILERS' WINDOWS.

There are several ways of producing business which have been clearly shown lately the most noticeable of which have been some of the windows put up by our leading retailers. The one that attracted the most attention was that of Smith & Fetters arranged by Frank Smith of this firm. It was composed of lycopodium for the bottom with miniature pink azaleas and decorated novelty hats for ladies, after the style that has been criticised so much of late by the daily papers in general; one in particular was an ordinary waste basket filled with scrap letters and trimmed with artificial fruit and natural flowers. The overhead decorations were of the richest satins and silks in the Alice blue shade with novelty air ships and light violets. The crowds around this display have been enormous, showing that the artistic effect is fully appreciated by the public at large. The interior of the store followed the same idea being trimmed lavishly with southern smilax and flowers with Easter plants in grand display, the entire force being taxed to the utmost in handling the trade these ideas have attracted.

The Gasser Co.'s retail store has a grand display of yellow azaleas with yellow Porto Rican mats and ribbon to match; this makes a stunning attraction and was fully appreciated by the noticeably large crowds the store has been handling of late.

On the west side the Knoble Bros. have the display advertising beside the window in the shape of a large display sign; this, together with the newspaper advertising, keeps them always busy. Nearly all the other retailers are making grand efforts in this line, especially with their windows.

NOTES.

The Ohio Floral Co., with a store in the Majestic Theater building and greenhouses in Parma, will discontinue business about June 1, the greenhouses and land having been leased to a party of vegetable growers. The store will be run as before by Miss Ehrbar, who has formed a partnership with Mr. Connors, the new firm to be known as Ehrbar & Connors. The good will of the trade in general goes with them in the new venture.

C. B. Wilhelmy, The Ehrbar Co. and Wilhelmy Bros. have all been busy lately with funeral orders having used great quantities of stock for this purpose.

Frank Williams, of The Cleveland Cut Flower Co., has returned from the south where he has spent the winter with his family. C. F. B.

Montreal.

PROSPECTS GOOD.

The outlook for Easter is very good with plenty of good stock ready to make it so. Lilies, especially the black stemmed variety, turned out very good and there will be sufficient to go around. The list of pot grown roses, being increased by several new varieties like Baby Dorothy and Tausendschon, will be better than ever before. Crimson Rambler is thickly set with buds this year; very little trouble is found of its going blind. Hydrangeas, azaleas, rhododendrons, spireas and bulbous stock are in abundance and seemingly in good time. Lilacs with some growers have not been very successful but the trouble seems local as with others they are all right.

Give your customers roses that keep well and you will keep your customers.

Reinberg's roses outlast any others.

PETER REINBERG
35 Randolph St., CHICAGO.

Trade last week was quiet. Roses and carnations are plentiful and of good quality; violets are offered at 25 cents a bunch. There is a steady sale of flowering plants all along.

NOTES.

At Hall & Robinson's the stock of Easter plants is very fine; their pot grown roses as usual are of the best, also the lilies. Their rose houses will have an immense crop for Easter. Killarney is easily the best and their carnations in the large house have greatly improved since January and are the picture of health. The place is perfectly free of insects, hydrocyanic-acid gas being used.

The landscape gardeners expect to be busy this spring; all claim to have large orders for trees, shrubs and hardy perennials and as soon as the snow has cleared off the ground planting will commence; there is no frost in the ground this year, the heavy coat of snow and ice prevented it penetrating and outdoor roses and perennials will come through in good condition.

P. McKenna & Son have a great show of well grown hydrangeas, spireas and a good lot of lilies, also an immense lot of bulb stock.

E. Bourboniere, whose place of business on St. Denis street was closed for some time last winter, has opened again.

A. C. Legare is making plans for another addition to his range of houses.

LUCK.

San Francisco.

LILIES WILL BE SHORT.

The market at the present writing is very quiet, but we are looking for an improvement when the Easter trade commences in a few days. The early part of March had been quite a busy time for some of the retailers, on account of the reopening of the large retail stores in the down-town district. Many of these stores were decorated for the opening day with greens and flowers and many handsome and expensive baskets of flowers had been ordered for the occasion. Flowers of all seasonable kinds are in the market in ample quantities to supply all demands and prices are accordingly not very high. Indications are that there will be plenty of everything for the Easter trade, with the possible exception of lilies, which seem to be coming in late and are of poor quality, mostly very short stemmed.

NOTES.

During a recent visit to Superintendent Eldred of W. H. Crocker's extensive estate at Burlingame, I found him very busy in transforming this place into one of the most beautiful places on the coast. No money or labor is spared to push the work ahead and it is astonishing what has been accomplished under the able leadership of Mr. Eldred in so short a time. Large trees are being moved for miles to get an immediate effect for the Italian gardens surrounding the newly erected residence of Mr. Crocker. The views to be had from the different courts over the San Francisco bay and the surrounding country are most beautiful and are a testimony to Mr. Eldred's artistic ability as a landscape architect. There are quite a number of other private estates at Burlingame and San Mateo improving their parks, etc., giving their gardeners as well as the landscape gardeners a busy time.

E. W. McLellan & Co. will have a great number of rambler roses; these are looking very promising, also a new house, 22x300 feet, the greater part of which is filled with Lilium longiflorum; the most of these will be ready for the Easter trade. They are cutting some very fine roses at this place.

The Pacific Coast Horticultural Society is out with a fine premium list for the fall exhibition, to be held October 14-16. Some very attractive prizes are offered for growers of choice plants and flowers, as well as for artistic work by the retailers.

ADVANCE EASTER DEMAND STRONG.

The market has been affected by the Easter demand. The old fashioned habit of holding stock back caused the prices of carnations to advance so that by Sunday and Monday the regular Easter list was in effect, especially for white. All orders could not be filled in full for white even at the Easter rate. With roses, including American Beauty, the advance has not been so sharp as the supply has been large and the quality run good. Medium length American Beauty and extra long Killarney and Richmond have been rather scarce. The heavy demand for Easter lilies took a slump when on Monday the thermometer began to soar, and indeed lilies have been much more plentiful than was expected. There has been a very heavy call for potted lilies. This feature of the Easter trade seems each year to be growing and large growers are catering to it by packing at the greenhouses ready for shipment direct to customers. Orders for hyacinths cannot be filled. Other bulbous stock has been about equal to the demand. Violets have been in good supply with prices unchanged. The price of common ferns has advanced to $2.50 per 1,000.

HAIL AT BOWMANVILLE.

A severe hail storm swept through the Bowmanville greenhouse district Tuesday afternoon. Some houses were entirely destroyed while others near by entirely escaped. Probably the average damage will run close to 15 panes to the house as it did at the J. A. Budlong establishment. At the Guardian Angel's Orphanage greenhouses, 401 Devon avenue, 1,000 panes were broken. Strangely enough the nearby places of Wietor Bros. and Matt Evert suffered very slight damage. Anton Then, 143 Winnemac avenue, lost about 700 panes of glass, the houses on the southwest corner getting the brunt of the storm and being nearly entirely destroyed. He also suffered a serious loss among his stock plants, including some of his Easter lilies. Frank E. Carlson's place, 3319 N. Western avenue, was seriously damaged as was also that of Fred Weber at 60 Bowmanville avenue. N. J. Kruchten, 3202 N. Western avenue, suffered heavy damage, very little glass being left in two of the houses. H. Bauske, 3210 N. Western avenue, and John Assa, 112 Bowmanville avenue, were also heavy sufferers. Wm. Kreutz, 613 Cemetery drive lost nearly half his glass and 800 panes are out of the greenhouses of the Rose Hill cemetery. It is reported that Peter Reinberg on Tuesday morning placed an order for 200 boxes of glass to repair his damage. John Miller placed an order for 25 boxes. The wind velocity reached 52 miles during the night and it is reported that J. Vacha & Sons, 2550 W. Forty-seventh place, had 600 panes of glass blown out.

FLORISTS' CLUB.

The regular meeting of the Florists' Club was held at the Union restaurant April 1. President Asmus in the chair. The chief business was the election of 10 new members as follows: S. W. Baker, John Bell, M. Matchen, W. Adams, Geo. Peiser, R. E. Kurowski, P. Olson, W. T. Scofield, Max Ringler and M. Fink. Albert T. Hey for the committee on revision of constitution and by-laws presented a new code which will come up for second reading at the next regular meeting. In the meantime it will be printed and copies mailed to each member so that they will have time to look it over before the next meeting. Andrew Benson in speaking of the recent Buffalo exhibition of the American Rose Society deplored the lack of enthusiasm on the part of western growers and trusted they would make a better showing of exhibits at future exhibitions. A postal card from Gustav Pearson, Salem, Mass., requesting aid and addressed to Secretary Rudd of the Society of American Florists was turned over to the club to be acted upon without delay, as the executive committee of the national society will not meet again until August. The secretary of the club was instructed to make inquiries in the case and report at the next meeting.

Chairman Enders of the entertainment committee was quite successful with his cinch party at the Grand Pacific hotel April 2, there being an attendance of about 60. The prize winners were: W. O. Johnston, John Kruchten and Walter Scott (of La Grange) among the men, and Mrs. Geo. Asmus, Mrs. Leonard Kill and Miss Ludwig among the ladies.

NOTES.

The Fleischman Floral Co. has been exhibiting a number of Easter hats, artistically trimmed with ribbon and flowers, all the week in the west window of the store on Jackson boulevard. The hats open at the crown to receive a bunch of violets or other flowers and have already proved excellent sellers at $10 or so each according to the flowers and trimming. Over 30 of these were sold in the first two days they were shown and they are being sent to all parts. Trade here has been remarkably brisk, good funeral orders being a special feature. Among the latter we noticed some very finely executed large funeral sprays of cycas leaves tied with purple ribbon that were very much above the average of this class of work.

After the Easter rush is over John Mangel is going to make considerable alterations to his store. The counters and other impedimenta have to come out and the interior will be finished in marble and mirrors. A fine new ice box will be installed and all up-to-date fixtures will be used. The windows are also to be improved and altogether Mr. Mangel will spend some $4,000 on the improvements. Trade has been extremely good here this season.

Members of the south park commission at its annual meeting held Monday afternoon in the office of the park, Fifty-seventh street and Cottage Grove avenue, re-elected all the officers of last year's board. The election of every member was unanimous and the following were chosen: Henry G. Foreman, president; Edward G. Shumway, secretary; Wm. Best, auditor; J. F. Foster, general superintendent.

The Ernst Wienhoeber Floral Co. reports a very heavy funeral business. On Friday last an order for a casket cover of ivy with a spray of variegated foliage was filled. On the following day another cover was made, using Killarney roses and a double spray of lily of the valley. On Monday a cover of lily of the valley and violets was made.

O. J. Friedman's new store on Michigan avenue is beginning to take shape and he evidently intends to have a very fine one. Marble and mirrors are being extensively used and it will be one of the lightest and best equipped stores in this excellent location.

Bassett & Washburn have begun cutting Kaiserin roses, and coming mostly from plants four and five years old are very large buds. They are now shipping 2-inch O. P. Bassett carnation plants ready for immediate benching.

Eric L. Eaton, husband of Emma L. Eaton and father of Mabel M. Eaton, of the Eaton Flower Shop, died April 1, aged 75 years. Interment was at Oakwoods. The store was closed on Friday and Saturday last.

Prof. J. J. Davis, assistant to the State entomologist, has taken possession of the air tight, bug-proof structure erected for the study of insect life on the high school ground at Oak Park.

Herman Schau, of Morgan Park, the other day received a 50 cent piece by mail with an order for a bunch of flowers and "please prepay express charges."

Stollery Bros. will move their retail store on May 1, from Evanston and Leland avenues to Wilson avenue near Evanston.

Indications, according to several good judges, are that all Easter records will be broken on this market.

Frank Beu has been sending to the cut flower market some of the old time Ulrich Brunner hybrid roses.

Max Ringier, recently with the Kennicott Bros. Co., is now with Vaughan & Sperry.

The Kennicott Bros. Co. on Saturday received 10,000 fine, long leucothoe sprays.

The E. F. Winterson Co. on Friday last received a second carload of box trees.

Zech & Mann have been showing some exceptionally fine Yellow Prince tulips.

The A. L. Randall Co. reports the sale of air plants as heavier than ever.

Keimel & Wendland, Elmhurst, are building three new greenhouses.

Mrs. John Steritt is now recovering from an attack of erysipelas.

Wietor Bros. report very heavy crops for the Easter demand.

The thermometer on Monday registered 70 degrees.

Frank Calvert, of Lake Forest, is ill.

Uncle John Thorpe is reported ill.

Visitors: M. Reukauf, of Philadelphia, Pa.; —— Dwight, Janesville, Wis.; A. Siegel, St. Louis, Mo.; Miss Jessie Baker, Clinton, Ia.; Robt. Shore, De Kalb.

MILWAUKEE, WIS.—The state railroad commission has decided that the street railway company must stop its cars at Fifty-first street on the West Allis line, as demanded by C. C. Pollworth. Mr. Pollworth bought a large tract of land for greenhouses in the vicinity with the understanding that the company would be required to stop its cars there. The company maintains that a stop would be an interference with its schedules.

GOOD EASTER EXPECTED.

The regular business of the wholesale district during the past week was not heavy, but through it all there was an undertone of hope and expectation of a good Easter. With good weather, all the indications are favorable to fine holiday business. Leading hotel men report that their business has of late greatly improved, due largely to the return from southern resorts of many city residents who have wintered in those summer climes. It is generally believed that there will be enough cut stock to supply all demands, but there are no indications of a surplus in leading stocks. Already there is a stiffening in the prices of American Beauty roses, which for several weeks past have been selling very cheap. On April 3 specials brought 40 cents, which is about what they sold for at Easter of last year, and, according to indications, they will go yet higher. The tendency in tea roses, carnations and violets, while not so marked, is upward. With good weather, violets are almost certain to sell well. By the middle of the week it will be possible to make a fair estimate of what the lily will do—or what buyers will do to it. There is an abundant supply of cut blooms on the market, but little good pot stock has yet arrived. There is little doubt that there are many lilies. The question is, are they of a quality that will sell well? A great amount of southern narcissus came in during the past week and it is now a staple stock with the peddlers. It goes without saying that the plant trade is active. Branch stores are being temporarily leased and filled up with plants and wagon loads of them on the main thoroughfares are daily sights.

April 5.—There is no unusual activity in the market this morning. American Beauty roses and violets are about the only stocks that, thus far, show an upward tendency, though 40 cents is the best offerings for the former, and 50 cents per 100 for the latter. The weather is fair but rather warm for the season and if present conditions prevail throughout the week there are prospects of a surplus of cut stock. Plantsmen are active and will be well prepared to handle their branch of the trade.

NOTES.

Chas. Thorley has had a verdict for $88,830 rendered against him, in favor of the Pabst Brewing Co. The case arose out of a basement which Mr. Thorley let to the defendant company and in which it conducted a rathskeller. This was demolished in subway construction thus breaking the lease. Mr. Thorley's counsel gave notice of appeal.

A fire on the upper floors of the Bristol building, Forty-second street and Fifth avenue on the evening of April 2, caused much excitement but fortunately no damage was done to the retail flower stores of Thos. Young, Jr., and Fleischman, which are located on the ground floor.

A powerful organization, of which Seth Low, ex-mayor, is the head, has been formed to fight the proposed encroachment of buildings in Central park. Prominent labor organizations have also taken action along similar lines.

Sir Thomas Scholes Magee, an Irish baronet devoted to gardening and who has 200 acres of his own under cultivation at Kilkenny county, passed through the city last week enroute to the west to visit Luther Burbank.

A. Warendorff of 1193 Broadway, had a large amount of fine funeral work during the past week for the funeral of the venerable John H. Starin, head and founder of the Starin line of steamships.

About 10,000 Japanese and Bermuda lilies will be shown in the Easter display at Prospect park, and, judging by the present condition of the plants, the show should be a remarkably fine one.

The plant market at Canal and Washington streets, opened for the season on April 3 and a good variety of stock was noted. The quantity will doubtless be increased as Easter approaches.

Many floral tributes were sent to the funeral of Mrs. Pierre Lorillard, Jr., at Tarrytown. The tragic death of Mrs. Lorillard at Washington, D. C., is fresh in the public mind.

J. K. Allen, 106 West Twenty-eighth street, is receiving shipments of very fine Jacqueminot roses that appear superior to the Richmond now on the market.

At a meeting of the trustees of the Growers' Cut Flower Co., April 3, a 10 per cent dividend was declared. Stock raised 25 to 35 per cent.

J. H. Small & Sons have, in the windows of their Broadway store, a very noteworthy exhibit of Lady Gay and Hiawatha roses in pots.

Chas. Milang has taken another store at Twenty-sixth street and Sixth avenue for Easter, and filled it up with fine plants.

Washington.

ADVANCE BOOKING GOOD.

The quietest period in society here is Holy week, and as a preliminary to a busy Easter it has its advantages. The fact that congress will be with us indefinitely will continue hospitalities for some time to come. Out-of-town shipments of Easter stock are arriving daily, and there are some excellent plants exhibited in the various show windows. So far as can be learned the retailers have booked a goodly number of advance Easter orders, and the general opinion is that we shall have an excellent Easter trade.

NOTES.

Z. D. Blackistone executed the decorations at the Japanese embassy; they were so arranged as to give a Japanese effect. The centerpiece was made up of Killarney roses and a good number of American Beauties, and azaleas were used in the parlor.

Geo. C. Shaffer furnished the flowers for the Alexander Stewart dinner given in honor of Vice-President Sherman. He also decorated and lent a number of handsome baskets for a play at Mt. Vernon seminary.

W. C. Brooke of Chevy Chase Greenhouses has made a success growing Beacon carnation, and believes it to be one of the best reds; he will also have a great many Easter lilies, but is sold out.

David Grillbortzer of Alexandria is sending in big shipments of Killarney and Richmond roses; these are his specials; he also grows some good Enchantress and Harlowarden carnations.

Chris. Schellhorn will have some excellent Bridesmaid, Golden Gate and Bride roses besides his miscellaneous stock, which he readily disposes of at his market stand.

A visit to the A. Gude Bros.' greenhouses showed that they have an excellent stock of azaleas, rhododendrons, lilac and other Easter plants which will be just on time.

A. Garden, the pioneer florist of this city, is cutting some good stock and will have an abundant supply for Easter.

The Washington Florists Co. reports a busy week, and will have a fine lot of Easter plants and cut stock.

Robt. Bowdler reports good business, and expects to have an excellent supply of various Easter stock.

Mayberry & Hoover claim business all that can be expected.

Geo. H. Cooke reports a fairly busy week.

Visitors: J. W. Dudley of Parkersburg, W. Va.; Sidney Bayersdorfer, Philadelphia, Pa.

G. S.

LENOX, MASS.—John Shepherd has given up his position at the Blantyre greenhouses.

Morristown, N. J.

The florists here are fully stocked for the Easter trade. The windows are being artistically arranged with cinerarias, azaleas, various colored rambler roses, hyacinths, tulips, etc. While a very large cut flower trade is being done here, plants are the big feature. They are not able to grow one-half they use but buy from the growers around Newark and Hoboken.

Andrew R. Kennedy, who has had charge of Brooklake, Dr. Leslie D. Ward's place at Madison, surrendered his charge April 1. This has been one of the show places of Madison, and it is reported that Dr. Ward does not intend to run it this year. This is a pity as under Mr. Kennedy's charge of three years, it has been a shining light.

Olaf Haarly, gardener to John A. Stewart for the past five years, sailed for Copenhagen, Denmark, last Thursday. He intends to stay a year. John Whalen, formerly gardener to C. W. Armour has taken his place with Mr. Stewart.

John Greenwald, for the past three years gardener to Wm. E. Wheelock, has rented the greenhouses of about 7,000 square feet from Dr. Waller. He expects to grow carnations and mignonette for the wholesale trade.

Wm. Hyland, for 12 years gardener to Mrs. Lord, in this city, has resigned to take charge of Stewart Hartshorn's place at Short Hills. Death in the Lord family causes them to give up the place.

Wm. H. Thomas, for 11 years gardener to F. C. Blanchard of Convent, has resigned. It is reported that Mr. Blanchard will rent the place. Another of the fine places on the retrograde.

E. R.

Irrigation Plans for Philippines.

The following item regarding irrigation plans for the Philippine islands is from the London and China Telegraph: "Evidence is not lacking that the government intend to make a serious effort to develop the agricultural resources of the islands by introducing an immense scheme of irrigation, which, it is expected, will involve an expenditure of between 10,000,000 and 15,000,000 pesos ($5,000,000 and $7,500,000). The main object of the government is to encourage the rice planters to extend the area under cultivation, so that the output may in time equal the home demand. The committee which was appointed to devise practicable ways and means contemplate the irrigation of 1,375,000 acres, but it is not considered probable that the entire system will be in operation for 37 years, while it will take 15 years for the Philippines to supply the wants of the people in rice. The committee recommends that the sum of 750,000 pesos ($375,000) be expended every year on irrigation.

MEDIA, PA.—Asa Bonsell, of the Cumberland cemetery, has erected a new greenhouse to provide cut flowers and plants for visitors and lot owners in the cemetery and, as there has been nothing of the kind before, it should prove a success.

BRATTLEBORO, VT.—Roland H. Messenger has resigned his position at the Bradley greenhouses and will enter the employ of Chas. W. Dunham. Mr. Dunham will build a thoroughly modern greenhouse of which Mr. Messenger will have charge.

QUIET WEEK FOR PREPARATION.

The busy week is here again; as if to give the stores a rest the business of the week just past was rather quiet which gave time for advance work. Flowers were far too plentiful, there being quantities of carnations, roses, sweet peas, etc., thrown on the market and bought at the buyer's price. The recent raid on the Market street curb merchants has curtailed their operations, which is shown by the piling up of the flowers in the boxes and cold rooms of the wholesalers. Carnations, which are generally scarce at this time, appear quite plentiful and it looks as if the Easter demand will be filled without difficulty. Lilies are not as plentiful as last season. One large grower who generally forced 20,000 bulbs dropped out and several other men whose output ran into over this amount cut their importations from 33 to 50 per cent. W. K. Harris says he turned down two orders of over 10,000 buds and flowers each at 12 cents per bud as he could not fill them. Prices range from 10 to 15 cents per flower and bud differing with quality of the plants and energy of the buyer and seller. The department store price is advertised at 15 cents per flower and they are known in some cases to have paid 12 cents. The quality of the Easter plant stock is excellent. Very little of it has been unduly forced and everything appears to be in except perhaps a few Dorothy Perkins roses which seem to require a longer period or somewhat different treatment to get them in time. The Robert Craig Co. has Tausendschon in fine condition; this variety should be in every grower's collection as it appears to come along without especial care other than is given Crimson Rambler. It appeals to buyers generally on account of its delightful shadings of pink and its quantity of bloom.

NOTES.

Sunday was visiting day at the greenhouses where Easter stock is the specialty. W. K. Harris offers the general public a view of his immense stock of flowering plants on every Palm Sunday. There is no printed invitation sent out but the throng of visitors has increased with each succeeding season until this season when over 15,000 flower lovers passed through the large packing or corridor house which divides the place. This is 305 feet long and 30 feet in width and along the sides of this from end to end was banked the orders that were to be sent out on Monday. It was a most gorgeous sight this mingling of the masses of color from the white of the lily through the various shades of pink of the azaleas and rhododendrons to the rambler roses. The blue hydrangeas were also conspicuous as were the variegated white and green maples. It was a truly magnificent display, far ahead in effect of any of the horticultural shows of recent years. At 10 p. m. the entire force set to work packing, one gang on the wagons and the other on express boxes. All plants here are packed lying down, the pots being wrapped in excelsior and cleated in on cushions of the same. It is astonishing how quickly it is done. M. Mills says they only pack the one way as the men get used to it and there is seldom a complaint from the customer. This has been the best season they have ever had.

Dennis Connor for the Lord & Burnham Co. reports great activity in greenhouse building, both private conservatories and greenhousese for the trade. Geo. Burton will erect a house 27x150. J. W. Ritchey of Lancaster is about erecting three 22x115. Hotbed sash, Mr. Connor says, are in great demand. Several other large commercial ranges are also being figured on but as the deals are not closed no names are given.

The Robt. Craig Co. had no display, having no time to stop packing, which has gone on with a large force for the past two weeks. Here the plants are all wrapped in paper and packed upright on a cushion of excelsior and the top crated. Both growers are very successful with their methods having by long usage grown accustomed to their way and would not change.

Robt. Craig may confine his Isle of Pines operations to a smaller tract than he first intended. K.

Boston.

STOCK PLENTIFUL.

All is now in readiness for Easter week and the general feeling is one of genuine cheerfulness. The market has been better prepared in former years than it is found today; however, this applies to quality alone. The supply in every line bids fair to meet all demands in all quantities, but the splendid stock usually characterizing the local market at Easter is sadly missed. Outside of American Beauty we have no first class rose; this is in a class by itself. Killarney and Richmond have shown a disinclination to appear in the right condition at the right time, and certainly furnish a problem worthy of consideration. Thousands of both varieties are being cut but the ratio of serviceable goods is very close to one per cent. Easter carnations too are far below the standard and much uneasiness is shown concerning this stock. Violets are in prime condition and, while enough will be found to satisfy the trade, prices will undoubtedly soar. Lilies are being kept under cover in spite of a regular call. No fear is felt but that the supply is sufficient to go around. Orchids have been very scarce but promises are made that the market will be well taken care of. This is the one time when this high class flower is indulged in more than at any other. Gardenias and lily of the valley are keeping well before the people and for Easter adornment cannot be surpassed. Many of the retailers have already displayed selections from their Easter plants, and in this department will be found the finest holiday stock ever prepared. In the leading role we find rambler roses, first of which is Dorothy Perkins. Several new varieties are displayed but are not so popular as this. Acacias, bougainvilleas, azaleas of every known variety, cyclamens, hybrid roses and all sorts of pan stock are pleasing in every detail.

NOTES.

A party of 20 members of the Gardeners' and Florists' Club inspected several of the leading commercial growers' establishments April 3. Among the places visited were those of Pierce Bros., The W. W. Edgar Co. and Edgar Bros., all of Waverley. At Pierce Bros. the principal attraction was the great display of lilies and azaleas all in ideal condition for the Easter trade. At the W. W. Edgar Co.'s plant a more varied stock was reviewed, but here too, the main attraction was held by lilies and azaleas with a noteworthy assortment of novelties. At the Edgar Bros. houses the sweet pea crop just coming in was a very interesting spectacle, the first of the kind ever seen by many of the visitors. The party returned home well pleased with its pleasant experiences in the first of the many outings scheduled for the spring and summer months.

The sympathy of the entire trade is extended to the venerable Wm. E. Doyle upon the death of his wife, Katherine E., who passed away after a lingering illness March 29 at their beautiful home at Cambridge. She was born and always lived in the latter city and was married to Mr. Doyle in 1871. Mrs. Doyle was well known for her charity and was prominently identified with many organizations. The funeral took place April 1, and was largely attended by friends including a representative gathering of the leading florists of the city. The floral tributes were beautiful as well as numerous showing the great esteem in which deceased was held. All of the leading tradesmen sent evidences of respect and honor to the bereaved husband.

Philip L. Carbone, the Boylston street retailer, who was appointed by Gov. Guild as assistant to Commissioner Billings to distribute the Massachusetts relief fund through the earthquake stricken district of Italy returned April 1 on the S. S. Ivernia. Mr. Carbone is loud in praising the Massachusetts people for their timely assistance and has been instrumental in distributing $150,000 to the afflicted people. Born in Italy Mr. Carbone was thoroughly familiar with the country and in the course of his work circled the island of Sicily three times. Several relatives met death in the terrible disaster, in the relief work of which Mr. Carbone has given three months of his valuable time. B.

Syracuse, N. Y.

The trade reports a good supply of stock for the Easter business. This out of the way there will be changes and alterations at several establishments. Walter N. Meneilly & Son, 404 Stuart avenue, has the glass for three new greenhouses soon to be erected. Walter Meneilly said he would start work as soon as the Easter rush was over. His firm has four greenhouses and the new ones will be of the same size, 20 by 100 feet.

April 6.—The Easter demand will find all well stocked with goods. P. R. Quinlan's stores are a bower of beauty with all classes of plants, and artistic baskets and hampers.

NOTES.

Bellamy Bros., who succeeded the late L. E. Marquisee on January 1, will move their seven greenhouses from 207 Delaware street to the corner of Onondaga avenue and Cheney street some time after Easter. Mrs. Marquisee has sold the site. The new location is near their residence. Two of the greenhouses will remain where they are. Henry Bellamy was for 18 years foreman for Mr. Marquisee and it was he who developed Marquis, Flamingo and Marchioness carnations. Mr. Bellamy predicts a bright future for Marchioness. At present time all of his seedlings are sold. Mr. Bellamy, through his advertisements in THE FLORIST having found a quick sale for them and received requests from all over the country for flowers for exhibition purposes. Marchioness is a pure white, very fragrant and prolific. The Marquis, a soft pink, has done remarkably well in many places. There has been a good sale for Flamingo, deep red. Mr. Bellamy has a new seedling—No. 96, a bright large pink, with a long stiff stem, four inches across and no sign of bursting. This firm has had a good demand for small brass hanging baskets. A. V. B.

Easter week found Henry Morris very busy with plant and funeral work. "This is the time of year," says Mr. Morris, "if you have both the plant and the funeral work you are busy. There is a growing popularity of plants of all descriptions each year and a smaller demand for cut flowers. Even for the sick in the hospitals many people purchase a prety plant with a fragrant blossom rather than the cut flowers." Mr. Morris has a fine display of pot plants in his windows.

Louis Klein, gardener at the New York state fair grounds on the outskirts of the city, has a century plant that is about to bloom. The stalk is nearly 30 feet high and Mr. Klein finds it difficult to find a place that will accommodate it. A. V. B.

BANGOR, ME.—Mrs. T. Allen will open a new retail store at 9 Hammond street.

SPRINGFIELD, MASS.—Horace C. Smith died at his home, 16 Grove street, April 3.

MARKET VERY STIFF.

At this writing the market is very stiff on carnations with roses commanding better prices. Between Palm Sunday and the demand for flowers at the inauguration of the new mayor, the market was left bare of good stock in these flowers on Saturday night. Lilies, which have been so scarce, are now over plentiful with low prices. The flowers could not be better but there are a great many with short stems. There will be a good supply of these for Easter. Violets have tightened up somewhat, and if we have the present quality at Easter this market will see some very fine blooms. Orchids are selling better, indicating that society is coming back to life after laying dormant through Lent. In pot plants there seems to be no scarcity and the quality is fine at the markets. Hyacinths are selling two for 25 cents.

NOTES.

At the Phipps conservatories the display of cinerarias is exceptionally fine. Foreman Jones states that while our American varieties make much the finer shaped plant, those from the other side have the best color. He also has a great many bushy ones, running about four feet high with clusters of very small flowers which are a delight to see. Another novelty here is a Harrisi lily with variegated foliage resembling somewhat Pandanus Veitchi.

A. T. Lorch & Co., DeHaven, is consigning The McCallum Co. some extra fine Winsor carnations; F. H. Westhoff, of the same place, is also sending in some exceptionally fine White Enchantress.

The Pittsburgh Cut Flower Co. is again handling a very large cut of lilies and promise to have them in any quantity for Easter.

The Florists' Exchange is strong on all varieties of good carnations also good American Beauty roses.

J. B. Murdoch & Co. expect to handle a great quantity of lilies and lily of the valley for Easter.

J.

American Beauties

The finest in this Market.

Pittsburg Florists' Exchange

15 Diamond Sq., PITTSBURG, PA.

HIGHTSTON, N. J.—Tracy H. Norton will build a new violet house the coming summer.

DAYTON, O.—W. G. Matthews contemplates a trip this summer to the coast, returning in time to attend the Cincinnati convention.

HOBOKEN, N. J.—A 10-story seed and grain warehouse has just been completed for the American Warehouse & Trading Co. at Tenth and Hudson streets.

AMESBURY, MASS.—J. W. Patterson, of Mt. Prospect cemetery, is increasing the size of his greenhouse, in which he grows flowers and plants for visitors and lot owners.

EASTON, PA.—D. Burrowes Nevin has purchased the greenhouses on College Hill and the store on South Fourth street from Arthur L. Raub and has taken possession.

ASHTABULA, O.—Thirty-six new greenhouses are to be built in this place during the comming summer. The following firms are the builders: R. W. Griswold, Jr., will erect 12; Dunbar & Hopkins, 10; Griswold Greenhouse Co., 6; Adams Bros., 5; Gallup Bros., 3.

RICHMOND, IND.—The E. G. Hill Co. is opening a retail store in the city. It is probable that, though opened for Easter, it will be continued. The company intends to use its east end plant for the growing of plants for the retail trade and its wholesale business will be cared for at the west side houses. It is probable that several of the east side houses will be removed to the west side soon.

The Seed Trade.

American Seed Trade Association.
Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

TAMPA, FLA.—The Reliable Seed Co. has been incorporated.

GREEN peas, paragraph 258, have been reduced in Payne bill from 30 cents per bushel to 25 cents.

THE big mail order day this year in the catalogue trade was March 12 with John Lewis Childs.

THE Department of Agriculture press bureau now reports 102 samples of seeds which it considers misbranded out of 1,471 samples tested.

RED CLOVER fields have probably been hurt by the fall drought and winter killed by the freezing and thawing during the past mild season.

ONE hundred thousand tons of Soja beans were shipped from Manchuria to England within two years. They cost less than three-fourths of a cent per pound in the country of production.

FREE SEED distribution will be increased next season from 36 million packets sent out this season to 60 millions, so it is said, and contracts have been made to cover the bulk seed needed for same.

CHICAGO.—Onion sets rule easier this week with reds and yellows at $1.75 and whites at $3 to $3.10.—Contract prices on the board of trade April 6 for grass seed were noted as follows: Prime timothy, $3.80 (nominal), white clover, $16.

THERE are no less than five market gardener mechanics throughout the country who think they have solved the problem of harvesting onion sets, and we look forward with much interest to the practical tests of the various machines during the coming summer.

THE illustration on this page was prepared from a photograph taken at the ground of Watkins & Simpson, the noted English seed growers. Many of this firm's varieties are among the best of their kind and well known to the trade, both here and in England.

NEW YORK.—Henry Nungesser sailed for Paris April 6.—The Bermuda steamer Prince George arrived April 5 with a large consignment of lily blooms.—The death of William Hagemann, the veteran bulb dealer, is recorded in our obituary column, page 537.—Visitors: J. C. Vaughan and wife, Chicago.

Free Seeds and Government Samples.

RESOLUTIONS OF WHOLESALE SEEDSMEN.

At the meeting of the board of directors of the Wholesale Seedsmen's League, April 1, the following resolutions were offered and adopted and on the following day mailed to the President of the United States and the Secretary of Agriculture:

Resolved: That the board of directors of the Wholesale Seedsmen's League deplore the constantly increasing tendency to swell the amount expended by the United States Department of Agriculture for the purpose of purchase and distribution of common varieties of garden seeds.

The board respectfully suggests to the President of the United States and the Secretary of Agriculture that a considerable saving or retrenchment in the expenses of the government could be made by the abolishment of such appropriation without in any way impairing the effectiveness of the Department of Agriculture; and that a further considerable saving to the government could be effected by relieving the post office department of the expenses incurred in the carrying and distribution of the enormous quantity of franked seeds sent out by the Department of Agriculture.

The board is of the opinion that the free distribution of common varieties of garden seeds and field seeds is of no practical value to the farmers and gardeners of this country, but, to the contrary, is a downright injustice and restraint of trade inflicted upon the seed business.

The board believes that a continuance of this practice certainly does not tend towards the best development of the nation, as it encourages a dependence upon the government, which is entirely foreign to the feelings and patriotism of the American people.

Resolved: That while the Wholesale Seedsmen's League as an organization, and its members individually, raise no objection whatever to the fair testing of seeds of grasses, clovers, and other farm seeds, for the purpose of determining if they are adulterated or misbranded, the association and its members do object to the methods of the agents of the department of Agriculture of the United States in obtaining such samples for test, as being unfair to the seed merchants and growers, in that the merchants and growers have no knowledge that that samples so reported upon actually came from them.

It seems to the Seedsmen's League but fair that the agent obtaining the samples should leave the merchant or grower a portion of that identical sample under governmental seal, as provided in the case of testing milk, fertilizers, etc., under the laws of the state of New York and other states.

Bulbs for Baltimore Parks.

Sealed proposals for the furnishing of tulip bulbs for the Board of Park Commissioners of the city of Baltimore, Md., marked "Proposals for tulips for the park department," addressed to the Board of Awards, care of the City Register, City Hall, Baltimore, Md., will be received at the office of the City Register, City Hall, until 11 a. m., April 21, 1909, in accordance with specifications which can be obtained at the office of the Board of Park Commissioners, Madison avenue entrance to Druid Hill Park, Baltimore. A certified check of the bidder for $200 on a clearing house bank, drawn to the order of the mayor and city council of Baltimore, must accompany each bid. The successful bidder will be required to give bond in the usual form in the amount of the contract for the faithful performance of his agreement. The board of awards reserves the right to reject any or all bids.

WILLIAM S. MANNING,
General Superintendent.

Results in Hybridization of Peas.

The Gardeners' Magazine for March 27 has an illustrated article on hybridization of peas which is of great interest to those working with this important vegetable. Various points are brought out in regard to habit, color of flowers, length of vines, etc., and the results of various crosses given. It is noted that frequently round and wrinkled

peas are found in the same pods on some of the seedlings. The article is well worth perusal by the hybridizer as it will save him much disappointment and useless work as well as render the results less uncertain.

Sesame Seed.

The following information concerning sesame seed, where produced and where consumed, is furnished by Consul Ernest L. Harris, of Smyrna:

Sesame seed is one of the staple products of the Turkish dominions, and is exported to Europe in large quantities. Smyrna and the neighboring districts produce annually about 50,000 sacks of 100 kilos (220 pounds) each; Rhodes and the islands of the archipelago, some 30,000 sacks.

Smyrna seed, which is white in color, containing only about 10 per cent of yellow sesame, sells a cent or two more per oke (2.82 pounds) than the seed from other districts, as the oil extracted is clear and has a better smell and taste. Sesame seed from Rhodes and the islands of the archipelago is heavy in weight and gives the largest yield of oil. Indian sesame seed, although inferior to the Turkish product in appearance, quality and yield of oil, finds a market in Europe when the Turkish crop is small and prices rule high.

A large quantity of the crop is used locally in the preparation of "taheen," which is the crushed seed mixed with the oil. Taheen is chiefly used in the preparation of "halva," a sweetmeat consumed largely throughout Turkey in the winter season. Of late years taheen is being exported to the United States, where it is used probably in the manufacture of halve or eaten raw by natives of these regions living in the United States.

The importing countries are chiefly Russia, Germany, Holland, Austria-Hungary and France. The conditions of sale are cash against documents, for seed containing not more than 4 per cent of foreign matter, gross for net, in double sacks, f. o. b. shipping port.

Several Smyrna exporters sell for delivery. This manner of transacting business sometimes occasions great losses to the exporters. Last year, for instance, the crop was so small that the market price was nearly 50 per cent higher than average years, so that merchants had to lose heavily in fulfilling their contracts.

Imports.

During the week ending April 3, imports were received at New York as follows:

F. B. Vandegrift & Co., 52 cases plants, 24 cases bulbs.

Maltus & Ware, 28 cases plants, nine cases bulbs.

C. F. Meyer, five cases plants.

Wm. Elliott & Sons, five cases plants.

Vaughan's Seed Store, four cases plants, six bags seed.

Stumpp & Walter Co., five cases trees.

J. M. Thorburn & Co., 42 bags seed.

McHutchison & Co., eight cases seed.

H. F. Darrow, one bag seed.

To others, 421 cases, 49 pkgs. plants, 58 pkgs. trees and shrubs. 21 cases bulbs, 1,061 bags clover seed, 1,040 bags, seven cases seed, one case orchids.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

LESLIE F. PAUL of the Colorado Agricultural College, Fort Collins, strongly recommends sterilization of soil for seed sowing for tomatoes and other plants.

THE Greenhouse Vegetable Co. of Chicago has been incorporated to deal in vegetables, truck and other garden produce with a capital of $2,500. The incorporators are Robt. F. Dilger, Lorenz Becker and Paul Nanzig.

Planting Cucumbers and Tomatoes.

Where cucumbers or tomatoes follow lettuce, and the lettuce is entirely removed before the new plants are set, it is best to watch carefully so as to have the crop come off, leaving the ground moderately moist. It is poor practice to cut lettuce from dry beds; on the other hand, if the ground is left in a soaking wet condition, it means a wrong start for the new crop. If the ground is moderately moist, the beds should be thoroughly worked up. The plants should be moist in their pots, and, after planting, each plant should be watered separately to settle the earth around it and after that the hoe should be used instead of the hose. It is of great importance to build up a powerful root system before leaves and vines, and the way to get it is to force the young plants to hunt for food and moisture. Water only enough to moisten the air, not the ground, and hoe once a week until fruiting commences.

MARKETMAN.

Cucumbers and Tomatoes in England.

SELECTION AND FERTILIZATION.

Selection and fertilization of both cucumbers and tomatoes are necessary if the best results are to be obtained and fruits of good shape secured. All credit must be given the hybridizers but the market growers work along different lines. The plants are closely watched and probably some individuals will show a different and earlier type both in habit and early fruiting and if the first cuts are good these are saved for seed. All seed bearing flowers should be fertilized, nothing should be left to chance, and muslin is used to protect the flowers from insects. Stocks carefully kept up in this way do not degenerate. For many years Rochfords have been sending out their market cucumber but it has been kept good and is today the best, not only for Covent Garden, but the market generally. Other growers have crossed and recrossed it and have their own selections but the true stock is still kept up.

Tomatoes degenerate sooner than most other crops and high culture and selection are necessary to maintain the varieties true. Cropping is of course the principal point for a market grower, but good, shapely fruit is also necessary. We always disbud the flower spikes early when saving seed; not so much with a view of large fruit, but to obtain perfection of the individuals saved. We do not need new varieties, we have plenty of them. What we do need is a good selection of those we already have. Harking back to cucumbers one of the worst trials we have in seed saving is the tendency to barrenness of nearly all strains.

The Horse in the Greenhouse.

In most of our modern vegetable houses a horse can be used to excellent advantage. After a house has been cropped in lettuce for months, a thorough turning up of the ground with a horse tool is the best possible preparation for cucumbers or tomatoes. For this purpose nothing is better than a Planet jr. plain cultivator, or a similar tool, and the operator should not spare his trips. If the ground is in proper condition as regards moisture, cutting the beds three to four times is not too much and time well spent. In houses with cement walks it may be necessary to take off the horse's shoes, to avoid damage to walks, but this little expense is easily recovered by the speedy and thorough work done. The best practice is for one man to lead the horse and another to handle the tool. Such a turning over will correct numerous soil troubles that accumulate under glass.

MARKETMAN.

Screens for Cabbage Seed Beds.

A year ago the growers of cabbage plants suffered severe losses from the ravages of flea beetles which ate little round holes in the seed leaves, causing them to shrivel and the plants to die, says S. A. Johnson of the Colorado Agricultural College. The beetles causing this injury are tiny, black insects, which have the habit of dropping to the ground, or jumping from the plants when disturbed. They delight in bright sunshine and the most severe injury is done on warm, sunny days. Turnips and radishes are also attacked. Some years it is almost impossible to get a stand of these vegetables.

In the open garden some relief can be obtained by dusting the leaves of the young plants with air-slacked lime or, better, with insect powder. The latter remedy is rather expensive, but a very good one in small garden patches. When cabbage plants are raised in beds, either in hotbeds or the garden, the beetles may be kept from them by the use of screens made from cheese cloth. A light wooden frame should be made, extending about two feet above the surface of the bed. The cheese cloth is stretched over this, extending to the ground on all sides. The edges that touch the ground may be lightly covered with earth to prevent the beetles from finding their way beneath. The cost of this method of protection will be in the neighborhood of 20 cents for each 1,000 plants raised.

"BULBS THAT BLOOM"

BETTER GLADIOLI THAN YOU HAVE EVER SEEN—YOU CAN GROW THEM.

Cedar Acres Gladioli command in the cut-flower market a price six times as high as the regular market rate, because the flowers are larger and finer than any procurable elsewhere. With my bulbs and cultural directions you can grow the same kind. They are as easy to raise as potatoes.

The Gladiolus has become the queen of the garden. From the old-time scraggly spike, the Gladiolus has developed into a magnificent and stately plant, bearing a wealth of of color as delicate as the finest orchid. For cut-flowers, they are unequalled in beauty, and last for nearly ten days, gradually unfolding.

My new seedlings including the famous Harvard, Kathryn, and Fireside, have been awarded numerous medals and certificates of merit.

BOOKLET FREE, showing Harvard in full colors, and many other new varieties, with reliable information about each one. **Send for it today.**

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y. Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

WASHINGTON, D. C.—Peter Bisset is starting a nursery.

THE Payne bill, paragraph 260, is reported to have been amended in the house, admitting evergreen seedlings free, formerly $1 per 1,000 and 15 per cent ad valorem.

HOUSTON, TEX.—Henry Zendler, a landscape gardener, blew his brains out on the porch of his residence on Cleveland street March 20. His invalid wife was in the house at the time.

PAPERS incorporating the Home Planters Association of Rochester were filed in that city, March 26, with the secretary of state. Harry Bartlett Phillips, Stuart Hamilton and Henry E. Gandy are directors.

THE special agent in charge of the Hawaii Experiment Station at Honolulu says there is an opening for a nurseryman in Hawaii. The supply of material for starting various crops is being done temporarily by the station, but this will be discontinued entirely as soon as the matter is taken up by a commercial nurseryman.

A MACHINE for cutting sod is figured and described in the Gardeners' Chronicle. It is worked by two horses and the knives may be arranged to cut the sod to any required size or thickness far more neatly and evenly than can be done by hand-worked sod cutters. It should be very useful when large quantities of sod are cut and the sward is sufficiently level to allow of its use.

SAN FRANCISCO, CALIF.—The nurseries here are reporting a very brisk season, nearly all conifers, evergreen and deciduous trees and shrubs, also outdoor palms of the larger sizes, being cleaned out entirely. The landscape gardeners have been having a very busy time of it lately. Owing to the long continued rain, very little preparatory work had been done during January and February, and consequently everything had to be done in a very short space of time.—P.

Pending Change in Nursery Tariff.

Paragraph 260: "Stocks, cuttings or seedlings of Myrobalan plum, Mahaleb or Mazzard cherry three years old or less, $1 per 1,000 plants."

This is the only change which the new tariff bill (H. R. 1438) gives the nursery interests.

Employers' Association of Landscape Foresters and Com. Entomologists.

On Monday, March 29, at a meeting held in the office of the Munson-Whitaker Co., Flat Iron building, New York, a new organization had its birth which will be known as the Employers' Association of Landscape Foresters and Commercial Entomologists.

The rules adopted by the society are very stringent, and, as indicated by its name, is exclusively for employers actively engaged in the business and able in every way to qualify in the practice of scientific tree surgery and commercial entomology, and thus the clients engaging the services of a member of the association can feel that his standing and qualifications are such as to establish a guarantee as to his ability in his profession.

Its objects are to promote good fellowship and individual improvement, and, as a body, to fight the "tree butchers" and fraudulent dopers, who are everywhere mutilating trees and imposing upon the public by their poor work which has made the formation of such a society an absolute necessity, and it is hoped that with such an organization much will be done in advancing the interest of the public, through the members and press, in the protection of our beautiful trees from diseases and the destructive work of insect pests by scientific treatment, thus placing the science of tree surgery and commercial entomology on a higher plane.

John T. Withers.

President-Elect Employers Association of Landscape Foresters and Com'l Entomologists.

The following charter members were enrolled: John T. Withers, Jersey City, N. J., president; James E. Whitaker, Boston, Mass., vice president; F. A. Bartlet, Stamford, Conn., secretary-treasurer; H. L. Frost, Boston, and Chester L. Whitaker, New York, examining committee; Lewis H. Wise, Jersey City, and G. H. Allen, New York.

Another meeting will be held some time in April to complete the organization. A special meeting will be called by the president in the near future to enroll new members. A number of applications have already been received. A convention will be held annually to discuss scientific matters in connection with the profession and to enlighten the public in the care and preservation of our beautiful trees.

After the meeting a banquet was held in the Barn room at Mouquin's, Sixth avenue. After the genial president had welcomed the guests he introduced H. L. Frost, a man of few words but to the point, as toastmaster, who very ably filled that position. Dr. George H. Stone, Ph. D., botanist and pathologist of the Massachusetts Agricultural College, Amherst, Mass., was the chief speaker of the evening and gave some interesting reviews in connection with his experience in the use of wood preservatives in the treatment of cavities. Addresses were made by Leonard Barron, editor of the Garden Magazine; W. E. Maynard, editor of the Gardeners Chronicle of America; H. L. Jones of Country Life in America; George H. Wyckoff, of the Interstate Chemical Co., Jersey City, and W. B. Pratt of Scalecide fame, gave interesting talks on the value of oils and leads for the destruction of our insect enemies. Mr. Wyckoff's partner, Mr. Rose, entertained the gathering with his sense of humor, showing evidence of another Mark Twain.

John F. Marion, a leading counselor-at-law of Jersey City, who has been very much interested in the development of parks and playgrounds in his city, made interesting remarks, and Addison T. Hastings, city forester and park superintendent of Jersey City, outlined the extensive work he is doing in that city in a very able manner, interspersing his talks with occasional bits of humor. Alexander Guttman, the well known wholesale florist, made a very complimentary speech in regard to the members of the new association, and contributed much to the spirit of the occasion by his liberal donation of the table decorations which consisted of a large plaque of Killarney, Richmond and Bride roses, and another of Victory carnations placed at opposite ends, with beautiful fronds of ferns, pansies and narcissi strewn artistically over the table with a beautiful boutonniere at each plate.

In respect to the dignitaries the lateness of the hour at which the banquet ended will not be mentioned.

K.

A Plea for Hardy Perennials in Parks.

In his paper on "Hardy Perennials and their Various Uses" read before the Gardeners' and Florists' Club of Boston, March 16, Robt. Cameron, superintendent of Harvard University Botanic Garden, Cambridge, Mass., made a strong plea in favor of herbaceous plants and their extended use in our parks and public gardens. His paper reads in part: You will all admit that herbaceous perennials are important in garden work. Well, the question may be asked, if they are so important, why don't we find them used more liberally in such places as parks, large rural cemeteries and other large grounds? To answer this question satisfactorily it would take a very long paper indeed. However, it may not be amiss to give a few of the reasons why they are not oftener seen in such places.

WHY THEY ARE NOT USED.

You are all well aware that when any large piece of work such as a park or large cemetery is contemplated, the first thought that comes to the commissioners or trustees of such places is, who is the best landscape gardener (or the more highly sounding name landscape architect) to take charge of this important work? The landscape architect of today has some training in how to make plantations of trees and shrubs and the right proportions to give them. In his plantations of trees and shrubs he plants acres, but when he comes to hardy perennials he measures his masses by feet or yards. In his meager information of hardy perennials he has not been able to grasp the many ways in which these hardy subjects can be used.

Another reason is that it takes many years to tell whether his plantations of

ROSES

We have a fine stock of large, dormant, field-grown plants, on own roots, of the following varieties: Boule de Neige, Mme. Plantier, Alfred Colomb, Perle des Blanches, Climbing Clothilde Soupert, Archduchess Elizabeth of Austria, Empress of India, Glory of the Exposition of Brussels, Philadelphia Crimson Rambler, Fisher Holmes, Cheshunt Hybrid, Climbing Wootton, Magna Charta, Countess of Roseberry Louis Van Houtte, Dorothy Perkins, Anna de Diesbach, Mme. Alfred Carriere, Vick's Caprice, Sir Thomas Lipton, Francois Levet, Eugene Furst, Crimson Rambler. Price: $12.50 per 100; $120.00 per 1000.

Tausendschon, the great new climber $20.00 per 100
Crimson Baby Rambler..... 16.00 per 100

Chrysanthemum Glory of the Pacific, fine plants from 2½-inch pots, $3.50 per 100.

Roses, Dahlias and Cannas a specialty.

ANDORRA NURSERIES,
Wm. Warner Harper, Prop.
Chestnut Hill, PHILA., PA

trees are correct; it takes a few years to know whether shrubbery is grouped correctly or not, but the first year shows the work of planting and growing hardy perennials satisfactorily; hence the landscape architect avoids criticism by using these plants as little as possible. Sometimes it is the fault of the superintendent or the person in charge. He may have been trained in early years as an engineer, a clerk in an office, or as we have had them in Cambridge, in charge of our parks, newspaper reporters. Men like these lack the right training and are not in sympathy with this work; indeed do not know how to plant correctly. These are a few of the reasons, but no doubt some of you can think of many more.

CORRECT PLANTING.

A person who is going to use hardy perennials ought to know his plants, not only their names, but the height, habit and color of the flowers and foliage and the most likely places they will grow in. He also ought to have good taste to arrange the various plants so that the flowers that are in bloom at any given time shall group well in form and color. It also requires study and forethought to get the best and most suitable plants for the different seasons.

The planting that has been done in parks of perennials has been so insignificant and out of proportion with other things, that we are in sympathy with those who have said they were out of place. Instead of using a dozen plants hundreds or even thousands of one kind of plant ought to have been used to bring about striking effects that would make impressions never to be forgotten. In nature, we find the plants liberally not in little patches but by the acre. You all remember, no doubt, the fields of golden rod, of asters, and many other plants which can easily be recalled to your memories. Why not create such planting in our parks? Not in borders but naturalize them in suitable places and make large impressive pictures. If one objects to foreign plants, there is no country in the world that has more beautiful plants than we have and there are any quantity that can easily be naturalized.

BOX TREES.

We have just received a carload of fine, shapely, compact trees in the following sizes:

Pyramidal Shaped

Height.	Each.	Pair	Height.	Each.	Pair
2½ ft.	$2 00	$3 75	4 ft.	$4 00	$ 7 00
3 ft.	2 50	4 50	5 ft.	7 00	13 00

Standard or Tree Shaped

Stem.	Crown.	Each.	Pair.	Stem.	Crown.	Each.	Pair.
18-22 in.	20-22 in	$3 00	$5 50	18-22 in.	30-32 in	$5 50	$10 00
22-24 in.	22-24 in	4 50	8 00	22-24 in.	32-34 in	7 00	12 50

Prices include trees planted in green tubs. If wanted out of tubs, roots done up in burlap, we will allow 10 per cent discount.

Bush Shaped

Fine, bushy plants, 15-18 in. high.....Each, 40c; per doz., $4 00

Methods of Propagating.

Jackson Dawson of the Arnold Arboretum was unable to be present at the last of the season's lectures of the Massachusetts Horticultural Society March 6. He was to speak on "Methods of Propagating Plants," but owing to illness was compelled to send in his paper to be read by Secretary W. P. Rich. His paper dealt with practical points of value. Seeds, it stated, should always be selected with care, and different seeds require different treatments. Those of the plum and peach, for instance, will not germinate until they have been frozen hard. Many tree seeds are packed in dry earth all winter, and some of the hard kinds must be soaked in warm water before planting. Only fresh seed should be used.

Price List Free on Demand.

Soil and situation are next to be considered. A deep rich loam well manured and as free from weeds as possible should be selected, sheltered from north and west winds. Planting in rows is preferable to broadcast sowing. Large seeds should be planted twice the depth of the seed—say an inch for beech or oak and two inches for hickory. The soil should be neither dry nor wet. Many tree seeds will not come up until the second year. Red and white maple seeds should be sown as soon as gathered and if well cared for will come up in one year. When seeds are sown in the fall, as soon as the grounds is frozen, they should be covered with hay or pine needles. As soon as the plants are up they should be cultivated and kept free from weeds. All watering should be stopped after September 1 to harden the wood. Ploughing between the drills is helpful.

Seeds just arrived from foreign stations should be treated with unusual care. If mildewed, they should be treated with a weak solution of copper sulphate. Nearly all deciduous plants should be transplanted after the first year. Box planting is a good system because it facilitates handling of the plants. About April put the boxes in frames where they will get the morning sun. In winter they can be kept in good condition if covered with sphagnum moss or pine needles. The critical time with young conifers is the first three weeks before they have a crown bud. Hot sun and excessive rain kills thousands of trees. After August they will need very little special care.

The propagation of kalmias, rhododendrons and plants of this class is especially difficult, and should not be attempted except in a greenhouse. They must be transplanted frequently. A sprinkling of hot sand will destroy fungi without destroying the plants. Many shrubs and trees can be grown from cuttings or from pieces of the root. The elm is an example of the latter class. The willows root readily from wood cuttings. Many of the roses it is almost impossible to grow from hard wood. Many plants root easier from soft cuttings in summer than from hard wood cuttings. Shrub cuttings should be five or six inches long, but willows may be longer. If the ground is well sheltered cuttings may be planted out in frames or nursery rows in the fall. The soil should be good and deep and well watered. By the end of the second year they should be ready for transplanting.

In growing soft-wood cuttings boxes or frames should be used, and need much more care than the hard ones. The earlier rooted plants can be set out in frames in spring and will be in good shape by winter if well cared for. Plants with stolons or underground stems, can be propagated from cuttings. Many plants wanted on their own roots can be had by layering. Layers are branches of plants cut partly through and buried in soil. They will then root at the eyes or place of cutting. By twisting the branch the flow of sap can be prevented. The sap must be regulated. Almost any branch or vine can be grown this way. Grapes may be cut off from the parent plant in the fall, but maples must be kept on the main plant two years.

Mr. Dawson's paper did not go into all the methods of grafting, but explained some of its features. All woody plants may be grafted. Old orchards may be made vigorous by grafting, although generally grafted plants do not live as long as plants on their own roots. There are some 50 methods of grafting, but these are modifications of some five or six ways. Scions should be cut before the sap is well started, and grafting should be done in the spring. Scions should be of well-ripened wood at least one year old. The paper described the various technical processes of inarching, grafting by approach, tongue grafting, bottle grafting, cleft grafting, side grafting, etc. All methods of grafting can be used on roots. Budding consists of taking a bud from one plant, with a piece of bark, and inserting it in a cut in another plant. Most nurserymen propagate more by budding than by grafting.

Dreer's Novelties in Hardy Perennials

New or Little Known Varieties Worthy of Special Attention.

LUPINUS POLYPHYLLUS ROSEUS.

Anchusa Italica Dropmore Variety. A grand improvement on the type, with intense deep blue flowers, $2.00 per doz.; $15.00 per 100.

Anthericum Liliastrum Giganteum. A giant form of the N. Bruno Lily with very large white flowers, $2.50 per doz.; $20.00 per 100.

Aquilegia Helenæ. One of the best of the Columbines, large pretty blue flowers, with large white corolla, 85 cts. per doz.; $6.00 per 100.

Campanula Persicifolia Humosa. A very large semi-double form of the peach leaved Campanula, flowers of a pleasing shade of blue, $1.50 per doz.; $10.00 per 100.

Delphinium Gold Medal Hybrids. The finest strain ever offered in mixed varieties, $1.25 per doz.; $8.00 per 100.

Delphinium Belladonna. The freest flowering of all Delphiniums, it is never out of bloom, beautiful turquoise blue, $2.00 per doz; $15.00 per 100.

Funkia Robusta Elegans Variegata. A decided improvement on all variegated forms, $1.50 per doz.; $10.00 per 100.

Helenium Riverton Gem. A new variety that originated on our trial grounds. Flowers old gold, suffused with bright terra cotta, changing as they mature to a wallflower-red, $1.50 per doz.; $10.00 per 100.

Helenium Riverton Beauty. Another variety which originated with us, quite distinct in color, which is lemon-yellow, with a large disc of purplish-black, $1.50 per doz.; $10.00 per 100.

Helianthus Sparsifolius. The most desirable of all the hardy sunflowers, especially valuable as a cut flower, 85 cts. per doz.; $6.00 per 100.

Four Valuable Hemerocallis. The four varieties here offered are great improvements upon the well-known Yellow Day Lilies.

Aurantiaca. Very large, bright, orange-yellow, sweet-scented flowers. 15 cts. each; $1.50 per doz.

Aurantiaca Major. Large trumpet-shaped, sweet-scented, deep orange flowers. Requires protection, 35 cts. each; $3.50 per doz.

Florham. Large golden-yellow sweet-scented flowers; very free flowering, 15 cts. each; $1.50 per doz.; $10.00 per 100.

Gold Dust. Large golden-yellow flowers, 15 cts. each; $1.50 per doz.

Incarvillea Delavayi. Popularly known as the hardy Gloxinia; extra strong roots. $2.00 per doz.; $15.00 per 100.

Iris Pallida Dalmatica Folia Variegata. A strikingly handsome variegated leaved form of this beautiful blue Iris, 35 cts. each; $3.50 per doz.

Gypsophila Paniculata Flore Plena. This is a perfect gem and as a summer cut-flower invaluable. We have a large stock of strong roots to offer this season. $2.00 per doz.; $15.00 per 100.

Lupinus Polyphyllus Roseus. This is a most attractive rosy pink form of Lupinus, producing gigantic spikes of flowers, $2.00 per doz.; $15.00 per 100.

Pentstemon Gentianoides Sensation. Gloxinia-like flowers in a variety of bright colors, including rose, cherry, crimson, purple, lilac, etc. For bedding they rival Phloxes. Petunias, etc. Not quite hardy, 3-inch pots, $1.00 per doz.; $7.00 per 100.

Primula Cortusoides Sieboldi. These are not so well known as they deserve; they are of free, vigorous growth, and can be flowered in pots in early spring, and respond quickly to forcing when placed in a temperature of 50 degrees, forming pretty pot plants in a short time, making excellent window plants, which meet with ready sale when in bloom.

We offer six distinct varieties, from pure white to the deepest rose in color, $1.50 per doz.; $10.00 per 100.

Rudbeckia Rays of Gold. In this new variety we have a refined form of the popular "Golden Glow," with which it is identical in color, habit, etc., but the flowers have narrower petals, full to the center, forming a perfect ball of gold. $1.50 per doz.; $10.00 per 100.

Stokesia Cyanea Alba. A white form of the popular blue Stokesia, equally valuable and a desirable addition; strong plants, $1.25 per doz.; $8.00 per 100.

Choice New Trollius. (New Globe Flowers.) The five varieties listed below are decided improvements on all sorts heretofore offered; of exceptional large size and good rich colors.

Gotterfunke. Large open orange-yellow flowers.

Helios. Very free flowering, pure yellow, on strong branched stems.

Leuchtkugel. One of the finest deep orange reds.

Lichtball. Large, globular orange-yellow flowers on stiff stems.

Salamander. Soft orange-colored flowers of globular form.

35 cts. each; $3.50 per doz. The set of 5 for $1.50.

HENRY A. DREER, 714 Chestnut Street, Philadelphia, Pa.

Texas Nursery Business.

AUSTIN, March 28.—Some interesting figures are submitted in the orchard inspection report of the Department of Agriculture for the year 1908. During the year, 288 new certificates were issued to growers and dealers and 108 outside firms were given authority to do business in the state. Following is a summary of the report: Acres of nursery growth inspected, 2,991; value of stock inspected, $1,016,675; trees inspected, 17,060,298, distributed as follows: Apple, 2,873,400; peach, 7,073,250; plum, 702,297; pear, 523,250; fig, 1,728,965; orange, 1,003,195; other citrus, 66,420; forest trees, 2,502,244; pecan, 315,265; apricot, 115,265; cherry, 167,290; miscellaneous, 155,318; ornamental shrubs, 1,515,144; roses, 736,915; grapevines, 956,160; seedlings, 641,250; strawberry plants, 584 acres; blackberry, 501 acres; dewberry, 298 acres; raspberry, 181 acres; other berry plants, 68 acres; miscellaneous plants, 310,667. Material increase in every department of the nursery business is shown by the report, and the department predicts a still more substantial gain during 1909.

SANGAMO.

Is the new, brilliant, glistening **PINK CARNATION** shown at Indianapolis and awarded the A. C. S. Certificate of Merit, attracting the attention of every carnation grower on account of its very pleasing color, long stiff stem and well formed flowers, measuring 3 to 3 1-2 inches. The calyx is strong, and as a producer it cannot be excelled.

Orders booked now for January, 1910, delivery.

$12.00 per 100; $100.00 per 1000.

Grown and disseminated jointly.

A. C. BROWN, Springfield, Ill. **CHICAGO CARNATION CO. Joliet, Ill.**

Tree Trimmers Trimmed.

Two young men, representing themselves as graduates of Yale and Cornell and expert tree trimmers, lately appeared at Poughkeepsie, N. Y., made contracts to prune certain apple orchards, hired 20 men to do the work at $2.50 a day, employed them 2½ days, taking them out in an automobile they talked of buying—then suddenly disappeared with $75 paid for trimming H. F. Fay's orchard. It is now supposed they were former employes of the Inter-State Tree-Treating Co. of Mount Vernon, N. Y., and had "worked" a number of wealthy people in that section.

(Orders booked now and plants held till you are ready for them after the Easter rush, or later.)

JACKSON & PERKINS CO., Newark, New York.

New Carnation **Lucille**

White, overlaid with Pink.
Will bring you bigger returns.
Try it and be convinced that it is a money maker.
$12.00 per 100; $100.00 per 1000.

A. F. LONGREN, Des Plaines, Ill.

Would Not Be Without It.

ED. AMERICAN FLORIST:—
I am very well pleased with the AMERICAN FLORIST, and would not be without it for twice its price.
JOSEPH KENNEDY.
Rumson, N. J., November 28, 1908.

MURRAY HILL, N. J.—L. B. Coddington is erecting a large greenhouse.

EVANSVILLE, IND.—Austin Wallace will build a greenhouse on his place at Eichel avenue at a cost of $1,000.

CARTHAGE, MO.—Finn & Son have moved their down-town office to the southwest corner of the square in the Osborn news stand.

ROCKFORD, ILL.—W. H. Hizer has leased a part of a lumber yard on South Main street for the greenhouse which he is to bring here.

OGDEN, UTAH.—John Chipp, Sr., one of the early settlers, and for many years the leading florist and greenhouse man of the city, died March 28, at Rock Springs, Wyo., where he has resided for about 14 years. Mr. Chipp was 76 years of age. He was a native of England, but came to this city when a young man and was actively engaged in the city's upbuilding. He is survived by a wife, four sons and one daughter.

JACK ROSE and VIRGINIA MAULE

Strong plants,

Adiantum Cuneatum Robecki, strong stock, 3½-inch pots, $8.00 per 100: 4-inch pots, $12 00 per 100.

Send for complete wholesale price list of Palms and Ferns.

The Geo. Wittbold Co.,
1657 Buckingham Place, CHICAGO.

MARY TOLMAN

A New Light Salmon Pink Carnation.

Of a somewhat warmer tone than Enchantress, and does not fade on the edge of the petals, having a clear, even shade all over the flower, which measures from 3 to 3½-inches, although 4-inch flowers are very common. The stem is long and stiff, holding the flower perfectly erect. The calyx is very strong, and as a producer, it comes early, is very free and continuous.

Orders booked now for January 1910 delivery.

$12.00 per 100; $100.00 per 1000.

Grow the Cherokee **ROSES** Pink and White

For Easter, 1910

Offer Your Customers Something New and Good

Perhaps one in one hundred of them have seen a **Cherokee Rose.** Have you?

CHEROKEE ROSES

Have dark green, thick and polished evergreen foliage. The flowers are single, 4 to 5 inches across, on very short stems.

THESE REALLY LUXURIANT ROSES ARE THE COMING TYPE

They are ideal for pot culture; grown on solid beds, immense sprays may be cut for Easter

We offer the white (Rosa Laevigata), 2 1-2 in. pots, $3.00 per doz.
The very rare pink variety, Anemone, price upon application.

CITY NURSERIES, S. HOCKRIDGE, Manager, **Redlands, Calif.**

The Gloxinia.

It is not many years since gloxinias were looked upon as only suitable for a stove with a high and moist heat; but in these days they are very often successfully grown in a cool house. It is presumed that a number of old tubers are now in pots or boxes, and it is to these we must look for our first batch of blooms, says the Journal of Horticulture. Therefore it will be necessary to start some of them in gentle heat, and subject them to a certain amount of moisture. The compost should be of a light nature, fibrous loam, well broken up, two parts; half decayed leaf soil one part, put through a ½-inch sieve, and half part of well-dried cow manure, all to be mixed with enough coarse sand to make it porous. Prepare some boxes about five inches deep with a layer of autumn fallen leaves in the bottom, and then the prepared compost, which should not be pressed too firm, as the tubers require pressing with the fingers as they are inserted, and a final sprinkling of coarse sand put on. The boxes should be placed where the temperature is from 50° to 55°, watering only just sufficient to keep the soil moist. If they are overwatered decay is bound to set in, resulting in utter failure. Prepare pots which will allow about an inch of compost around the tubers. These will be ready for potting when the growths are from two inches to three inches high. Similar compost to that above-mentioned will be suitable, only in a little rougher condition. Be sure the pots are clean and well drained. Allow the newly-potted plants a position where they will have plenty of light, as this will ensure sturdy growth. A higher temperature may then be given, and as the days lengthen and the sun gets more powerful, this difficulty will be lessened where only a cool house temperature can be maintained. Seeds are also sown now. The gloxinia is quite one of the great decorative plants of today and seed houses vie with each other in the production of ideal erect-flowering types of the plant.

Carnation Cuttings

11th & Westmoreland Sts., **PHILADELPHIA, PA**

The Return of the Flowers.

Text: "Behold the grass of the field; consider the lilies, how they grow."

In the far south the distant hillsides are mingled with rose and snow, colored by the peach orchards, now in full bloom. From South Carolina comes an envelope filled with wild violets that now embroider all the meadows. Pushing aside the leaves in the forests of New Jersey one finds the arbutus, the sweetest single perfume that nature has ever perfected.

Already, even in the cold North, at the park, the tulips spot the earth with gold and fire. The boughs of all the trees are purple. Where bareness was yesterday will be beauty tomorrow.

Could the old Greeks return they would scent the sweetness of the air and whisper that Ceres was abroad in the land. The poet who lays his ear to the ground perceives that the universal soil is moving, throbbing, aching with a hidden secret. When the morrow's morrow has come, going into the open air man will find that the land is embroidered with snowdrops, anemones, with violets, crocuses, from sea to sea. These flowers are God's greatest natural miracle. No anemone or daffodil can be explained by a black clod and a pint of water.

Our earth holds many sons of genius named scientists and inventors, but the genius of no scholar is equal to making in the laboratory a single rose petal. Great is a sheaf; wonderful the shock! Most marvelous a cluster of grapes or a bough of peaches. But Nature's supreme achievement is the arbutus and the violet, led forth out of frost and winter.

THE UNLIKELY BEGINNINGS OF THE FLOWER.

Consider the flowers, how untoward their beginning. Unseemly, also, their first estate. This bulb that the gardener plants so carefully looks like an onion or garlic. The bulb can be peeled; it is rough, unseemly, without hint of perfume or beauty. But thrust it into the ground that it may die. Let the fallen leaves become its shroud and funeral blanket. Let the winds blow in November and the flakes of February fall. The day will come when ugliness will bloom.

Strange that that unseemly bulb could blossom into this chaliced lily cup, fit to hold the nectar sipped by angels! And yet when poets and artists are seeking for something that holds loveliness so divine that it can interpret the immortal hope and heaven, they go to this ugly bulb and thrust it into the ground and wait, kowing that this divine beauty shall issue therefrom.

It is God's world. The blossoming bulb is an emblem of unfolding plans. Out of the prisons has come the moral beauty of John Howard. At midnight, in the lowest dens of London, surrounded by a hundred thieves and lost women, Father Dollin sits, working his miracles. St. Catherine sought out the murderer, pressed the boy's head against her knee, drew from him his sobbing confession and transformed his life. The Maoris of 50 years ago were cannibals in New Zealand. And today they live in ceiled houses, graduate their children from high schools, have their own representatives in parliament, have married their daughters to bankers and gentlemen of rank and title.

A million foreigners come, and the native Americans stand aghast. Ten summers pass over the newcomer, and lo! his children stand forth patriots, industrious citizens, full of thrift, loyalty, obedience and beautiful service.

The miracle of barrenness bursting into beauty is a perpetual miracle. Weeds are only latent flowers. An ugly root holds a latent rose. An unseemly bulb will unroll into an Easter lily. Out of this hut will come a sage, a poet and a statesman. Consider the flowers of the field, and be an optimist.

THE LESSON OF HAPPINESS.

From this greatest event of the week, also, the return of the flowers, comes a rebuke of man's fussiness, unhappiness and endless agitation. Jesus understood how simply the flowers lived, how naturally they grew. They toil not, they spin not, they worry not, they strain not for effect. In quiet trust they take the happiness that each morning's sun and dew offer. And richly does the sun reward them.

Untwisting its beams of light and spreading out the seven rich colors, the sun lends red to the rose, blue to the forget-me-not, gold to the daffodil, lavender to the lilac.

The flower's one duty is to use the talents given it. God has given it roots, and it quietly uses the roots for the pumping of sap and moisture, and when that task is completed it peacefully waits for God and His sun to do the rest.

And this great sun-lover never betrays the trust. Stooping to the little flower, the Sun-Father whispers: "I have chosen thee to beauty; thy name is written on the palm of my hand. Trust in thy Sun, work hard, do good, and thou shalt be fed with beauty, and grow." And, sweetly obedient, the flower toils on toward its reward and wakens to be crowned with the loveliness that seems more of heaven than of earth.

With such a marvel before one it seems strange that men should be anxious, fretful, querulous, full of burning thoughts by day and fierce passions by night. If God remembers the very grass and flowers of the field that bloom, and crowns them with beauty for a few days, how much more will He remember His daughters and His sons, made in His image and destined to come into His likeness!

The tired soul that listens to the flower will hear a little voice whispering: "Trust in the Lord; do good; thou shalt be fed. Fret not thyself in any way. Nothing shall be able to separate thee from the love of God, thy Father and my Father."

THE LESSON OF COMPANIONSHIP.

Consider the flowers and their return, that man may find his lost paradise. Stooping above a little wild flower that has pushed its way up between two clods, the poet's eyes are dimmed and suffused with tears. In that moment a soft, silken splendor steals over the whole earth. The whole heavens become roseate. Every poor child, despite its rags, stands forth in the guise of an angel, newly entering the scene. God's wine is freshly poured. Doubt and fear become contemptible. God is seen to be fully equal to every form of good for society. The power that can turn a frozen lump of mud into the field daisy, crimson-tipped, can turn huts into houses, swords to ploughshares, wars and warring armies into angels of mercy and healing, hate to love.

Winter is marching toward flowers, and then ignorance is marching toward wisdom. Tenements are marching toward avenues; poverty is marching toward plenty; disease is marching toward health; darkness is marching toward light, and the angel of life is issuing from the door of death.

The flower rebukes fear, makes joy a duty and hope one's native atmosphere for the worker. Blessed be God for these flowers, whose roots are in earth, but whose perfume is borrowed from heaven. —Newell Dwight Ellis, in the New York Sunday World.

The Best Dollar's Worth.

ED. AMERICAN FLORIST:

I have much pleasure in enclosing my subscription for the AMERICAN FLORIST, the cheapest and best dollar's worth in the United States.

FRANK C. ROSE.

Libertyville, Ill., January 14, 1909.

KENNEWICK, WASH.—C. M. Stockman, manager of the Kennewick greenhouses, says he will at once begin work on another new greenhouse to meet the increasing demand.

THE LEEDLE FLORAL COMPANY SPRINGFIELD, OHIO

Conquest

A New Seedling Carnation to be disseminated next season. This is a variety that florists have been wanting ever since they discarded Prosperity.

CONQUEST is a light flesh pink, overlaid with a deep rose pink, the color extending over the petals from the center almost to the edge. It does not fade, making it a most beautiful and attractive flower. Its habit is somewhat on the order of Lawson, although the stem is somewhat longer, and very stiff. The flowers are well filled and nicely formed, which add to its attractiveness. Without a doubt, it will be the most attractive as well as the most profitable variety to be disseminated the coming season.

Orders booked now for January 1st, 1910, delivery. $12.00 per 100; $100.00 per 1000.

HEADQUARTERS FOR

ARAUCARIAS

"By jingo," was the remark of a bright looking gentleman, as he stepped with his lady friend into one of our Araucaria houses. "If these are not the best shaped and finest looking specimens of **Araucaria Robusta Compacta, Glauca** and **Excelsa** I have ever seen, *then I am a shade.* ☞ Just look! What a sight this time of the year, one as nice as the other!"

Araucaria Robusta Compacta, Glauca and **Excelsa.** Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen. As big as an elephant, for 75c; as big as a jumbo, for $1.00; and as big as a holy terror, for $1.25 to $1.50.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-7-8 in. pots, 4-5 year old, 4-5-6 tiers, 20-25-30-32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3-4-5 year old, 4-5-6-7 tiers 6-in. pots, 20-25-30-35 in. high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

Plants That Become Pests in Hawaii.

The territory of Hawaii is compelled to watch the importation of plants and vegetables probably more closely than any state or territory on the mainland, in order to guard against the entrance of pests both of the animal and vegetable types. For the past five years the quaratine maintained by the Territorial Board of Agriculture and Forestry has been very strict and though onerous at times, is very generally supported by public opinion. Many insects and plants which in their native habitat are so controlled by either their natural enemies or by the period of cold weather, that they do not in any sense constitute pests, become very troublesome when brought into a salubrious climate such as Hawaii possesses; and hence great care must be exercised in allowing any new thing to be brought in.

A very striking example in this regard is to be found in the lantana (L. Camara—of the verbenacæ group) which is valued all through the United States as a bedding or greenhouse plant, and which is rather difficult to raise north of the gulf states. Some plant fancier brought the seed of this shrub into the islands some years ago, and now it constitutes a thoroughly defined and very troublesome pest. It has obtained a foothold on most of the islands, and has taken possession of large tracts of pasture land, and other uncultivated tracts, where it forms almost impenetrable thickets. Laws have been passed to check its spread, and an insect enemy imported which it was thought would destroy it. This has been of some efficiency, but there is now some uneasiness lest the "lantana blight," as it is called, will refuse to confine its attentions to lantana alone.

On some of the islands cattle men have much trouble with the common North American blackberry and raspberry which here refuse to confine themselves to fence corners and out of way places, but sometimes take possession of considerable areas of pasture lands. Considerable money has been spent in employing laborers to dig out the roots from the cattle ranges.

GERANIUMS

We have an immense stock of fine plants from 2-in. pots at $2 00 per 100, $18.50 per 1000 and up. We will send 1000 50 each of of 20 good sorts, our selection, for $18.50 cash, or we will send 1000 from 3-in. pots in good assortment for $3.00 per 100; $25.00 per 1000.
